Sow Hay Mixtures For Spring Grazing

The nation-wide hay shortage plus the increased number of animals to be wintered in this State will place a heavy demand on North Carolina farmers this year.

Every Carolina farmer will do well to save all the available roughage this fall and make preparation now for growing a winter hay crop for early grazing next spring, says John A. Arey, extension dairy specialist at State College.

Oats, barley, abuzzi rye, of a mixture of these cereals, and crimson clover sown in September will furnish the good grazing early next spring. If the season is favorable, they will also furnish grazing this fall.

Seeding for grazing purposes should be heavy. Arey recommended the following mixtures, which have given good results. In these mixtures, the quantity of seed needed for one acre is listed.

Two bushels of abuzzi rye and 15 pounds of crimson clover, or a mixture of one bushel of beardless wheat, one bushel of beardless barley, and one and a half bushel of oats, and 20 pounds of hairy vetch or 30 pounds of Austrian winter peas.

The rye and clover mixture does not make good hay, but makes excellent grazing for late fall and early spring when sown in September. The second mixture, sown preferably between October 1 and 15, can be used for both grazing and hay.

If hay is to be harvested, grazing should be discontinued in March, the exact date depending upon the location in the State. Yields of two to five tons of hay per acre have been secured from this latter mixture when sown on good land.

The hay will be ready to harvest next May when the cereals are in the milk stage of maturity.

Four Year Scholarship Offered by Morrisons

The Cameron Morrison scholarship providing tuition for a four-year course in dairy husbandry at State College will be given to the 4-H Calf Club member in North Carolina making the best record with Jerseys this year.

The scholarship, offered by Mrs. Cameron Morrison, of Charlotte, will be awarded October 12, during annual State Fair Week, under the supervision of L. R. Harrill, State Club Leader, cooperating with the dairy extension office.

The award will be open to any bona fide Jersey Calf Club member in North Carolina between the ages of 10 and 20 years who has completed two or more years of calf club work.

A calf raised by the candidate in his club work must be exhibited in the state calf club show to be held in connection with the state fair.

The basis of the award, according to Mr. Harrill, will be the record made by the member. Points will be counted thus: financial gain, 30; dairy management, 10; leadership activities, 10; type and condition of animal, 35; showmanship, 15.

Mrs. Morrison has offered the scholarship to promote interest in Jersey calf club work. She and her husband, former Governor Cameron Morrison, are both Jersey enthusiasts.

On his farm near Charlotte the former governor owns one of the best Jersey herds in the State. Among the animals is a prize group of 30 Jerseys imported this year directly from the Isle of Jersey.

Answers Timely Farm Questions At State College

QUESTION: What hens from this year's flock should be saved for layers this coming season?

ANSWER: A great deal will depend upon the quality of the birds when going out lay but the late moulters in good weight and whose production has been up to standard will be profitable. These hens will have a decreased production of approximately 25 percent but, with egg prices going up, a good hen should pay a profit. If there is not sufficient housing space, hopper space and waterers none of the hens should be saved as they would cause overcrowding and lesser production of all birds.

the acre of a 4-10-4 fertilizer gives best results. In the Coastal Plain section an equal amount of 4-8-4 is recommended. These fertilizers may be supplemented with a top dressing of from 50 to 100 pounds of a quick acting nitrogenous fertilizer such as nitrate of soda or sulphate of ammonia applied about March 1. A good coat of stable manure may be applied during the fall and winter instead of the commercial fertilizer and will give good results.

QUESTION: How can dairy calves be rid of stomach worms?

ANSWER: Preventive measures are most important in controlling this parasite. Pastures should be well drained and the calves placed on fresh pasture as often as possible. The medical treatment for infected animals consists of drenching with a copper sulphate and nicotine sulphate solution made by dissolving one-quarter pound of clear blue crystals of copper sulphate in one pint of boiling water and adding enough cold water to make three gallons. One ounce of forty percent nicotine sulphate is then added to each gallon of the solution. For calves, the dose is from three to four fluid ounces. Animals should not receive any food or water for 12 to 18 hours before the treatment and on water for three or four hours afterwards.

Balanced Farming Is Future Program

Agricultural adjustment is passing out of its emergency phase of crop reduction into its second phase of maintaining a balance between production and consumption, says Dan I. O. Schaub, of State College. The farmers, he said, have cooperated to curtail production. In addition, the drought has required the use of much of the burdensome surplus from other areas.

But the Agricultural Adjustment Act was not created merely to eliminate the recent over supply and then cease functioning, the dean said.

There will ever remain the problem of balancing production with consumption for the best interests of the farmer and the consumer.

The balance has not yet been attained, Schaub added. In fact, the drought has caused some new maladjustments that will have to be corrected before the agricultural adjustment program can achieve its end.

The ideal is production of sufficient foods and feeds to supply the domestic requirements and the probable export demands and at the same time return a fair price to the farmer for his labor and investments.

Dean Schaub said that during the rest of 1934 and 1935 the farmers can be of great assistance in developing a well rounded general plan for the future. No agricultural program can succeed unless it is a farmers' program, understood by them, and carried forward by them, he emphasized.

The first trench silo for Martin county has been dug by Frank Weaver and holds between 45 and 50 tons of silage.

Constipation Symptoms Soon Go Away After Use of Black-Draught

Mrs. S. G. Ramey, of Henryetta, Okla., writes that she has taken Theodor's Black-Draught about twenty-five years, when needed, and has "found it very good." "When I have a sour stomach and my mouth tastes bitter, and I feel bilious, sluggish and tired, I will very soon have a severe headache if I don't take something. I have learned to keep off these spells by taking Theodor's Black-Draught. Very soon I am feeling fine. I feel that Black-Draught can't be beaten as a family medicine." ...
