Household Insects Easy To Control

Sodium fluoride is recommended as an insecticide to rid a house of cockroaches.

Dust the fluoride on places where the roaches run, said Dr. B. B. Fulton, research entomologist at State College.

Since young roaches are likely to hatch from eggs already laid, he continued, the dusting should be repeated every few weeks until they disappear.

If the roaches continue to infest a house, it is evident that they come from some source where at least some of the roaches are not reached by the dust.

Clothes moths cannot live in a high temperature. If fabrics are spread outdoors on a warm, sunny day, Dr. Fulton continued, they will soon develop a temperature fatal to the moths and eggs.

Saturating clothes with dry cleaning fluid and then putting them out in the sunshine to dry is recommended in cool weather. After they have dried, they may be stored by tying them up in paper or muslin bags.

The simplest treatment for moth infested furniture is to take it out of the house on a warm, sunny day and drench the fabric with dry cleaning fluid. Allow the furniture to remain in the sun until dried.

Sodium fluoride, mixed with eight parts of wheat flour to one part of fluoride, is an effective control for silverfish, Dr. Fulton added. Place the bait in the attic, basement, closets, on shelves, behind books, the space under the bathtub, and any other place where the insects may be.

October Is Time To Plant Flower Bulbs

Flower bulbs which are to blossom in the spring, such as tulips, hyacinths, narcissi, and grape hyacinths, may be planted in October, or as late as mid-November in eastern North Carolina.

The ideal soil does not pack, is crumbly and moist, yet well drained, said Glenn O. Randall, professor of floriculture at N. C. State College.

When preparing to plant bulbs, plow the soil to a depth of 10 inches, then pulverize it thoroughly, he recommended.

Stable manure, thoroughly decayed, is a good fertilizer. If decayed manure is unavailable, bone meal may be used, or a complete fertilizer containing 4 or 5 per cent nitrogen, 8 to 10 per cent phosphorus, and 4 to 6 per cent potash.

A good way to plant bulbs, when they are to be set in clumps or in beds, is to remove the upper four inches of soil, set the bulbs the desired distance apart, and then cover them with the soil that was removed.

When planting a large area, the soil may first be removed from a space about 3 to 5 feet in size, the bulbs placed in position, then covered from soil removed from an adjoining area.

This opens up the adjoining area, where bulbs may be set and covered with soil from an area just beyond. This process may be followed until the entire lot is planted.

In all cases, Randall stressed, apply the fertilizer and carefully prepare the soil before setting out the bulbs.

Sees Future Profits In Raising Hogs

Every year North Carolina farmers are buying outside the State approximately \$1,000,000 worth of work stock that could be raised at home.

This is clearly a waste of money, in view of the fact that it costs almost nothing to raise a few hogs or mules for home use, said Fred H. Haig, professor of animal husbandry at State College.

When a mare drops a colt in the spring, she need be away from work for only a few days. In fact, it is better for the colt and for the mare to keep her at work, except for a few days at foaling time, Professor Haig stated.

On farms cooperating with the AAA crop adjustment programs, there is a considerable quantity of land which has been removed from the production of cotton, tobacco, wheat or other basic crops.

1935 Red Cross Poster Invites Your Membership

Feed for work stock, Professor Haig continued. Four acres will produce all the feed needed by a horse or a mule for one year.

The number of horses and mules in the United States has been decreasing steadily, with the price going up, he pointed out. In North Carolina, the number dropped from 408,000 in 1925 to 339,000 at the present time.

Good work stock will always be in demand, he observed, and the price will remain high as long as the supply is low.

Unless North Carolina farmers breed and raise more stock at home, he added, they will have to pay out large sums in the future for work animals, or else try to get along as best they can with an inadequate number of animals to do the work.

Farmers Urged Not To Buy Work Stock

With the current trend of pork prices, North Carolina farmers are again finding a profitable source of income in the production of hogs.

Growers raising hogs for market should breed their sows about November 1 and May 1 each year, said W. W. Shay, swine specialist at State College.

By following this schedule, two litters can be produced each year so that they will be ready for marketing in September and April respectively, when prices are usually highest.

The ideal marketing weight for a hog is around 200 pounds, Shay said.

Growers raising hogs for home consumption may vary the breeding date, but if they plan to sell some of their hogs, Shay said it will pay them to follow the recommended schedule.

Where pigs were farrowed in September, they should be weaned in October and early November. The weaning process should start by giving the pigs access to corn and fish meal or tankage. After about four weeks they should be taken completely away from the sow.

Castrate the male pigs before they are completely weaned, Shay recommended.

Self-feeder, in which feed may be kept before the pigs at all times, will hasten their growth. Directions for building self feeders may be obtained free from the agricultural editor at State College, Raleigh, N. C.

Give the pigs an abundant supply of pasturage on a lot that is not contaminated with worms. If worms once get into the pigs, they are usually there to stay, Shay warned.

WEDNESDAY AFTERNOON CLUB

Mrs. John B. Lewis was gracious hostess to members of her card club this week, and to a number of special guests, including Mrs. Kirby Cobb, of Snow Hill, Mrs. Claude Barrett, Mrs. Louise Harris, Mrs. E. C. Carr, Miss Alice Coggins and Miss Russell Ward.

Miss Elizabeth Davis scored high in the afternoon's play and received lovely linen towels. A delicious salad course was served at the close of the usual number of progressions.

Camels never get on your Nerves. I CAN SMOKE ALL I WANT BECAUSE I SMOKE CAMELS. THEY DON'T UPSET MY NERVES. I SMOKE A GREAT DEAL TOO. I PREFER CAMELS BECAUSE THEY DON'T MAKE MY NERVES JUMPY, AND I LIKE THEIR FLAVOR BETTER. YOU'LL LIKE THEIR MILDNESS TOO! Red Cross Has Busy Year; Statistics Impressive; Services Varied

Figures gathered at random from the year's report of the American Red Cross reveal the magnitude of the work being carried on by that organization.

Red Cross workers assisted 54,305 veterans; 557 Red Cross Public Health nurses paid 921,455 visits to 186,326 patients; 98,441 first aid certificates were issued while 46,693 persons were trained in life saving. Volunteer workers produced 3,102,843 surgical dressings, with 80,901 volunteers being on active duty throughout the year.

First Aid Treatment Taught Thousands By Red Cross

More than 187,000 certificates showing completion of first aid courses were issued last year by the Red Cross. This shows a gain of 56,000 certificates over the previous year. Approximately 64,200 boys in C.C.D. camps throughout the country passed first aid tests. Since the Red Cross first entered the field of first aid teaching, being one of the first organizations in the world to do so, almost one million persons have been trained in handling emergency treatment.

The annual report of the Red Cross further reveals that more than 327,000 copies of the Red Cross Aid Handbook have been sold at home and abroad.

The Red Cross has assisted 54,305 veterans in clearing their cases through the U. S. Veterans' Bureau this past year.

Last year 3,837,941 persons became members of the Red Cross. The annual roll call takes place each year between Armistice Day and Thanksgiving Day.

Junior Red Cross members increased by 402,000 enrollments during the year which has just passed. Junior members carried on an exchange of correspondence with junior members in 62 other countries having Red Cross Societies.

Civilization being what it is, more people have heard of Sally Rand than of many a saintly mother who gives her life for her children.

McCormick-Deering Disk Harrows

And "Bumper" is Right!

GOOD Harrowing means a good seed bed and "bumper" crops. The bumper disk harrow shown above has a country-wide record of performance. An exclusive McCormick-Deering feature, the heat-treated crimped-center disks, gives this bumper disk harrow unequalled ability to hold its sharp cutting edges under tough, hard soil conditions.

The expense of frequent sharpening is saved, and the disks are automatically kept in shape for fast, clean work. It's the last word in disk quality!

We are now displaying the new McCormick-Deering Bumper Disk Harrows best suited for local conditions. Come in and see them.
