Bill Carr Receives Award From DuPont

Bill Carr has received a second award for practical suggestions concerning production in the DuPont Industries located near Wilmington, Del. A son of Mr. and Mrs. E. C. Carr of Farmville, he has been employed with DuPont since his graduation from State College five years ago with a degree in chemical engineering.

The latest award was given for a suggestion made while Bill was a junior supervisor in the Sulfur Colors Area. Since that time, he has been transferred to another plant.

According to the company the suggestion resulted in substantial savings in materials.

The process is explained thusly, "It had been the practice to add a certain amount of a clarifying agent to each charge of rubber 'peptizing' material in the neutralizer before filtering to the clarifier. Bill observed that inasmuch as the agent acted as an apparent oxidizer tending to reduce the yield of the product, the amount used could be greatly reduced without any sacrifice in quality.

"He suggested then that three charges be accumulated in the clarifier, a Barrett Color Rating Test be made and then only the indicated necessary amount of the agent be added to meet color specifications. In addition to the material savings there has also been an increase in the yield."
