HOW IT CAME ABOUT.

Lamont's First Meeting With Grover Cleveland.

New York Sun.

The late Colonel Daniel S. Lamont used to relate most amusingly to his intimate friends...

Lamont was then a reporter on Albany Argus, which was controlled by Daniel Manning...

But those letters had to be answered, and as they piled up before him day by day...

"Dan, I shouldn't wonder if you might be able to help Cleveland out in this. Suppose you run up to Buffalo and try it."

"So Lamont packed his grip and it didn't take much of a grip to carry all I had in those days..."

"Come in!" said a vigorous voice. "Colonel Lamont and his handbag went in. The governor-elect was sitting at a table..."

"Well, governor, I guess I'll be going now to hunt up a place to stay. What time shall I come around in the morning to begin work?"

"In the morning!" exclaimed Cleveland, looking surprised. "You're not going to begin work at all in the morning. You're going to begin right now."

work at all in the morning. You're going to begin right now.

"Now, Lamont was tired and hungry and sleepy. He kept the tired and sleepy part to himself, however, but admitted to the governor that he was hungry..."

"Entirely unnecessary, replied Cleveland. 'I can feed you right here.'"

"They went to work, and from Lamont's knowledge and experience and training in the matters to be attended to he was able by half-past one in the morning to get such a good showing of order out of the mass and had outlined such practical plans for facilitating the work that the governor said he guessed they could spare the rest of the night for sleeping."

"Ob, never mind that," said Cleveland, "I will call you."

"As the late secretary used to say, he went to bed so tired that his head had hardly touched the pillow before he was asleep."

"He heard the stove being shaken down vigorously and the rattle of coal being put on, and recognized the voice of the governor, who was doing the shaking down and coaling up, humming the then new and popular song, 'When the Robins Nest Again.'"

"Lamont looked at his watch. It was just 4 o'clock! The governor was up getting breakfast ready, preparatory to the beginning of work for the day."

"The system that Lamont put into the work of straightening out that tangled mass of correspondence and in a remarkably short time getting it moving in easy and proper channels favorably impressed Grover Cleveland. At any rate, that is the way, so Lamont used to say, that he and Grover Cleveland first met. How much that meeting meant to the future of each is history now."

Mrs. Mary Mapes Dodge, poetess, editor of St. Nicholas Magazine and author of several stories for children, died at her summer cottage in Antona Park, Tannersville, N. Y. Tuesday's Raleigh Times says Mr. Franklin Sherman, who has held the position of State Entomologist for the last five years, has resigned, and left last night for Canada, where he has accepted a full professorship in Ontario Agricultural College. Mr. Sherman's departure will be universally regretted not alone by the State officials who were his associates, but by the people of this entire city. He was among the best posted and most capable of the men who have been identified with any of the various departments in the State.

NEW PRESBYTERIAN PASTOR.

Brief Sketches of Rev. and Mrs. R. C. Anderson, Who Will Come to Gastonia Early in September.

Rev. Robert Campbell Anderson, the subject of this sketch, was born to the Rev. R. C. Anderson and wife in Henry county, Va., July 26th, 1867. His father was the pioneer Presbyterian preacher of Henry county, and under his faithful ministry of 47 years Presbyterianism was securely founded in this section of the State.

Under the supervision of this consecrated father, amidst the hallowed associations of a godly home, the son was prepared for college. At the age of 16, young Anderson taught a public school of 40 scholars giving eminent satisfaction. With the proceeds of this school, together with funds which he had accumulated on the farm by manual labor, Mr. Anderson entered Hampden Sidney College, Va., where he spent three years, graduating with the degree of B. A., in the

REV. R. C. ANDERSON.

summer of 1887. While a student at college he paid special attention to the Literary societies, and was selected as senior orator to represent his class at the final commencement.

In the fall of 1887, Mr. Anderson entered the Union Theological Seminary in Va., and graduated three years later. During the first vacation from the seminary he supplied the Buffalo, Pamphle's and Walkers churches. In the second vacation he labored in Lynchburg, Va., as supply of the Westminster church during the vacation of the pastor, Dr. Fleming, and preached also to a mission of this church which he also supplied twice a month during the following winter. This mission has since developed into the West End church.

Through the solicitation of the late Rev. R. L. Labney, D. D., in 1890, Mr. Anderson went

MRS. R. C. ANDERSON.

to San Angelo, Tex., and took charge of the church at this place which was at the time a small church of only 33 members with no manse or study. His ministry was greatly blessed at this place, the membership being almost quadrupled and besides a handsome manse was erected at a cost of \$2,500 and a study costing \$400.

On Dec. 30th 1890, he was married to Miss Katie Pierce Walker of Richmond, Va., the daughter of the late Gen. Lindsey Walker and Mrs. Sallie Kiam Walker. On the 12th of Feb. 1892 his companion was taken and by this sad circumstance Mr. Anderson resigned the charge at San Angelo, and accepted a call to the Second church, Roanoke, Va., a little church of 28 members struggling under a debt of \$6,000 and so church building. While laboring here he received calls to other points offering strong inducement by way of much larg-

THE DEADLY MOSQUITO.

Surgeon White of the U. S. Public Health Service Assumes That Every One Knows That Yellow Fever is Transmitted Only by the Mosquito.

In all letters received by the business men of Raleigh from their correspondents in New Orleans is enclosed a circular letter addressed to the president of the New Orleans board of trade, Mr. E. F. Kohuke, and signed by J. H. White, Surgeon United States Public Health and Hospital Service, in charge of government relief measures in Louisiana, which answers the question if yellow fever is transmitted in other ways than by the deadly mosquito. The letter is an interesting one, and we print it in full:

"Dear Sir:—Referring to your letter of the 29th, requesting my reasons for not considering it necessary to disinfest freight of any character, I have to say that these reasons fall under several heads. 'I assume that everybody knows the fact that yellow fever is transmitted solely by the mosquito, from one man to another man. We must, therefore, consider whether or not, our infected mosquito is likely to become an inhabitant or passenger in freight parcels. The particular mosquito transmitting this disease is one of the most easily destructible of these insects, being killed by a very slight pressure.'"

"In freight parcels of any sort, a mosquito in a box would unquestionably be caught and crushed during the jostling in transit. Again, remember that freight packages originate in warehouses and factories, which places are not the habitats of sick people, and the infected mosquito will therefore not be found in such places."

"It is a conceivable fact, that a mosquito from a sick room might drift into the street, but the habit of this mosquito, in so doing, is to seek the first clean water to lay its eggs and then die."

"It is extremely improbable that she will take up her abode in a place of business (warehouse or factory) rather than to seek a congenial pool of clean water to deposit her eggs in accordance with nature's provision in her case."

Referring to more special cases, namely commodities such as coffee, sugar, rice in bagging, I have to say, not as a matter of opinion, but of real knowledge, that such articles as these above will in the very handling, absolutely annihilate any mosquito which may have sought refuge in the crevices of the bagging. The weight and shifting character of a bag of coffee or sugar is an absolute guarantee of the destruction of this little insect, the first time such a bag is thrown to the floor of a car or roughly handled on a truck."

There is no possible way in which yellow fever may be transmitted other than by the mosquito, and freight cannot, under any circumstances, be infected in this way, but only so far as it might become the residence of an infected mosquito. I believe I have shown with reasonable clearness that it is not likely to become the residence of any kind of mosquito, much less the infected mosquito whose presence in business and manufacturing establishments would, in the nature of things, be a very remote contingency."

TREES AND LIGHTNING.

Dangerous to Stand Under Oak or Elm During a Storm

New York Sun.

About the most dangerous place to seek shelter in a thunderstorm is under an oak or elm tree, as was proved again by the experience of a dozen persons in Prospect Park, Brooklyn, only a short time ago. This fact has long been known to scientists, but many persons are killed every year by lightning because of the lack or disregard of this knowledge.

The total annual loss of life by lightning is not known, for complete statistics on the subject have never been kept. A few years ago the United States Weather Bureau attempted something of the kind in a tentative way. Its experts figured out the average number of persons killed by lightning yearly in the United States as 312. But this was not complete. From several States in the Union the Weather Bureau received no reports.

The reports received did show that of all that lightning killed

FARM STOCK and VEHICLES

Our first lot of Tennessee Stock for fall selling has just arrived—a nice lot of young mules, horses and mares specially adapted to farm use. This stock has all been carefully selected for us by our Tennessee buyer, who supplied us last season with upward of 500 horses and mules. Come at once and make the choice that suits you. Terms are favorable, as usual. Extra big supply of vehicles of every kind. Biggest line of rubber tires we have ever carried, among them some vehicles sure to interest you.

Full Line of Mowers and Rakes

CRAIG & WILSON

only a few were struck in the open field. Most of the killed and injured, it was found, had sought shelter from thunderstorms under trees, in doorways of barns or near chimneys.

While no records of the kinds of trees most often struck by lightning has ever been kept in the United States, the lightning rod conference held in England in 1881 reported that in the United Kingdom the trees most often struck were the elm, oak, ash and poplar. It also said that the beech, birch and maple were seldom touched by lightning. It was an elm that was struck in Prospect Park on July 8.

For a period of eleven years in the Principality of Lippe Detmold exhaustive records were kept of all trees struck by lightning. These showed that trees standing near water seemed to be the most likely to be hit and gave this table of comparative danger: Oaks, 100; elms, 77; pines, 33; firs, 10; fir trees in general, 27; beeches, by far the safest of all forest trees, 2.

CHECK FOR \$1000,000.

Green County Man is Made Millionaire Because of Act of Kindness While at College

Kinston Cor. Charlotte Observer.

If the banks of New York honor a check drawn by the administrator of the estate of the late Senator Mark Hanna, in favor of Mr. Peller, and in turn endorsed by him to Mr. Theophilus Edwards, of Greene county, the latter gentleman will be a millionaire, all because of a generous act of his in antebellum days, when he was a man of affluence. The check for \$1,000,000, drawn as stated above, was received by Mr. Edwards and, after having been submitted to a North Carolina congressman for inspection, was expressed to the bank in New York for collection.

The story runs thus: Mr. Edwards, who was one of the wealthiest property and slave owners in Eastern Carolina before the war, was attending Eastman College, Poughkeepsie, N. Y., and there became acquainted with a young man by the name of Peller who was struggling for an education. His money gave out and he was on the eve of quitting the college before he had finished when Mr. Edwards furnished the money for him to complete his education. The young man was prosperous after he left college and amassed a great fortune. It seems, also, that he was a legate of the House estate and received a million-dollar check from the administrator and this he endorsed over to Mr. Edwards. The story reads like a romance, but one thing is certain, Mr. Edwards received such a check and, if it is honored, will be a millionaire soon.

Mr. Edwards is about 65 years old and a half-brother to Mr. Thomas Harvey, of this city.

Last Thursday while an employe of the Tomlinson Chair company of High Point, Mr. W. K. Teague, was working with some chairs with another employe and while some screws were being put in the arm of a chair with brace and bit, the brace slipped and the bit penetrated young Mr. Teague's eye. The physicians are of the opinion that the sight is destroyed.

Dr. W. H. Wakefield OF CHARLOTTE

will be in Gastonia at the Fall House on Sat., October 28th., for the purpose of treating diseases of the Eye, Ear, Nose and Throat and Fitting Glasses.
