

Miss Kelly Tells How Lydia E. Pinkham's Vegetable Compound Restored Her Health.

Newark, N. J.-"For about three years I suffered from nervous break-

down and got so weak I could hardly stand, and had head aches every day. tried everything I could think of and was under a physician's care for two years. A girl friend had used Lydia E. Pinkham's Vegetable Compound and she told me about it. From the first day I took it I began to feel better and now I am well and able to do most any kind of work. I have been recom-

mending the Compound ever since and give you my per-mission to publish this letter."-Miss FLO KELLY, 476 So. 14th St., Newark, N. J.

The reason this famous root and herb remedy, Lydia E. Pinkham's Vegetable Compound, was so successful in Miss Kelly's case was because it went to the root of her trouble, restored her to a normal healthy condition and as a result her nervousness disappeared.

What Insignia Was This? Members of the Red Cross auxiliaries may be able to explain what is to follow, but it is too much for me.

Those who knit, crochet, tat, crossstitch and otherwise manipulate the elusive needle may be able to tell what it all meant, but all I do is to relate the facts.

'Twâs a large colored woman, walking down the street. Around her ample form she wore an apron of black and white checkered material. On it, done in what I was told was cross-stitch, were three large roosters. Perhaps the design was taken from some nursery pattern.

And as if to make sure that there vas no mistake, in letters four inches high above the birds was the following legend, also done in cross-stitch: 'Roosters."-Washington Star.

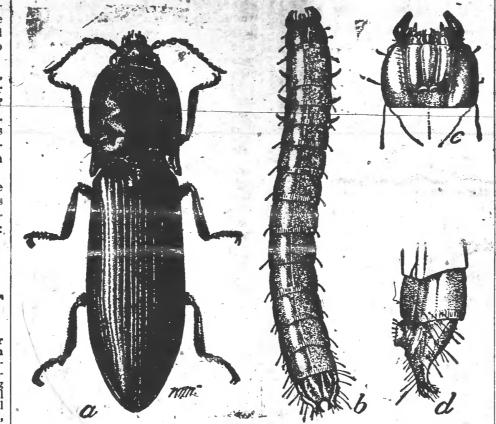

TOO WEAK **TO FIGHT**

The "Come-back" man was really never down-and-out. His weakened condition because of overwork, lack of exercise, im-proper eating and living demands stimula-tion to satisfy the cry for a health-giving appetite and the refreshing sleep essential to strength. GOLD MEDAL Haarlem Oil Capsules, the National Remedy of Holland, will do the work. They are wonderful. Three of these capsules each day will put a man on his feet before he knows it; whether his trouble comes from uric acid poisoning, the kidneys, gravel or stone in the bladder, stomach derangement or other ailments that befall the over-zealous Amer-ican. The best known, most reliable remedy for these troubles is GOLD MEDAL Haarlem Oil Capsules. This remedy has stood the test for more than 200 years since its discovery in the ancient labora-tories in Holland. It acts directly and gives relief at once. Don't wait until you are entirely down-and-out, but take them today. Your druggist will gladly refund your money if they do not help you. Ac-cept no substitutes. Look for the name GOLD MEDAL on every box, three sizes. They are the pure, original, imported Haarlem Oil Capsules.—Adv.

PREVENTIVE MEASURES ONLY SUCCESSFUL METHOD KNOWN TO CONTROL WIREWORMS

HOKE COUNTY JOURNAL, RAEFORD. M. C.

The dry-land wireworm (Corymbites noxius): a, Adult; b. larva; c, under surface of head of larva; di side of last segment of larva (a, b, enlarged; c, d, more enlarged).

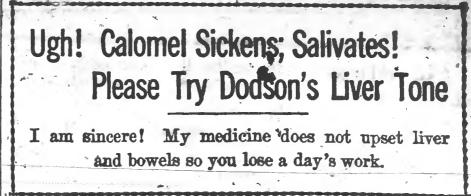

Wireworms are especially destructive to seed corn in the ground and to the young corn and wheat plants. They work entirely underground and are among the most difficult to control of all the insect foes that affirt the farmer. Much may be done, however, to lessen their ravages by careful tillage. drainage, proper rotation of crops, etc. Wireworms are the young of the common snapping beetles, or click beeles, and the worms are yellowish or prownish, highly polished and slippery to the touch. They move actively and disappear rapidly when brought to the surface by the plow or spade. The ggs are laid in the ground, usually in sod lands, where the young worms are hatched. It takes three years for most kinds of wireworms to get their full growth and to become beetles.

The most successful method for the control of wireworms are cultural in nature, it having been found impossible, or at least impracticable, to poison them by any known means. Where it is proposed to plant sod land to corn the following year, to prevent wireworm injury the land should be plowed immediately after the first hay cutting, usually early in July, and should be cultivated deeply is removed. during the remainder of the summer. Land already in corn which is padly infested should be cultivated deeply, even at the risk of slightly root pruning corn, on freshly broken sod land if the corn. This should be confinued this can be avoided. To do so exposes as long as the corn can be cultivated, it to almost certain injury by wireand as soon as the crop is removed worms, cutworms, and white grubs. the field should be tilled thoroughly Plant such land first to soy beans, before it is sown to wheat. In regions where wheat is seeded afterwards rotating to grain. The down for hay, any treatment of in- growing of any one kind of grain on fested fields is precluded. Where the the same land continuously is sure to wheat is not followed by seeding to result in damage from insect pests, other corps, the fields should be plow- and is bad agricultural practice. Adopt ed as soon as the wheat is harvested. a good system of crop rotation suit-This kills the worms by destroying able to your particular region. If you their food supply and preventing them do not know the most approved sysfrom preparing suitable sleeping quar tem of rotation for your locality, ask ters for the winter. A thorough preparation of corn land

(Prepared by the United States Depart-ment of Agriculture.) and a liberal use of barnyard manure or other fertilizer is recommended, and a vigorous stand may be produced sometimes in spite of the wireworms by such treatment. Wherever practicable the interposing of crops not. severely attacked by wireworms, such as field peas or buckwheat, between sod and corn tends materially to reduce the number of wireworms in the soil. Some kinds of wireworms live only n badly drained land, and for this reason thorough tile draining of such fields is often very beneficial, especially where the general condition of the fields is improved by proper applications of lime and thorough cultivation.

In the Northwest and northern middie West the dry-land wireworm, pictured above, is very injurious. The following methods have been found to he valuable in the elimination of this pest: (1) Disk or drag harrow the summer fallow as early as possible in the spring in order to produce a dust mulch and thereby conserve the accumulated winter moisture; (2) continue the disking as often as is necessary in order to maintain the mulch and keep down the weeds; (3) plow the summer fallow in July or early in August and immediately drag; (4) plow the stubble as soon as the crop

Avoid Fresh Soc

knocked out. Your head is dull, your tongue is coated; breath bad; stomach sour and bowels constipated. But

dop't take salivating calomel. It makes ick; you may lose a day's work. Calomel is mercury or quicksilver, which causes necrosis of the bones. Calomel crashes into sour bile like dynamite, breaking it up. That's when you feel that awful nausea and cramping.

If you want to enjoy the nicest, gentlest liver and bowel cleansing you ever experienced just take a spoonful of harmless Dodson's Liver Tone tonight. Your druggist or dealer sells you a bottle of Dodson's Liver Tone for a few cents under my personal that the sale of calonel is almost money-back guarantee that each spoon, stopped entirely here.--Adv.

You're billous! Your fiver is sing- I ful will- clean your sluggish liver betgish! You feel lazy, dizzy and all ter than a dose of nasty calomel and that it won't make you sick.

Dodson's Liver Tone is real liver mericine. You'll know it next morning because you will wake up feeling fine, your liver will be working, your headache and dizziness gone, your stomach will be sweet and your bowels regular. You will feel like working; you'll be cheerful; full of vigor and ambition.

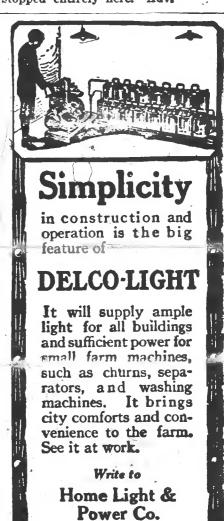

Dodson's Liver Tone is entirely vegetable, therefore harmless and can not salivate. Give it to your children-Millions of people are using Dodson's Liver Tone instead of dangerous caldmel now. Your druggist will tell you

Technically Correct.

One of the Y. M. C. A. workers in France, in a letter to a friend in Los Angeles tells of an autotruck driver connected with the Red Triangle who was never seen without a box conspicuously labeled 'tools.' Finally one day an inspection officer halted the truck and asked: "What's in that box? It's labeled 'tools,' but every time you have to niake repairs you get tools from under the driver's seat."

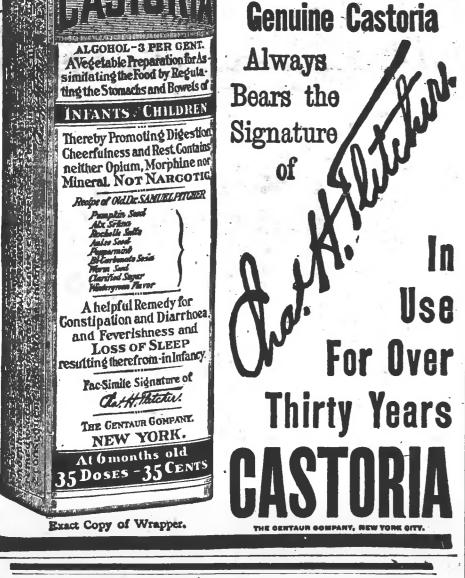

The young man opened the box and took from it several tin plates, knives, forks, skillet and a coffee pot. "Cooking tools," he remarked laconically, and threw the lever into the high.

Knowing the true feed and production records of each cow, the dairyman practices selective breeding, eliminates with certainty all. low producers, and feeds the remainder according to known production.

SKIM MILK IS BEST **UTILIZED BY FAMILY**

Feed Only Surplus of Nutritious Food to Live Stock.

None of It, Either Fresh or Sour, Should Be Wasted-Supplies More Food Value in Preparing Dishes for Table.

(Prepared by the United States Department of Agriculture.)

It is generally understood that milk is a good, nutritious food, yet on many farms some skim milk is fed to live stock that could be utilized to better advantage by the housewife in feeding the family. It is cheaper and easier to find an economical substitute for it in feeding stock than in feeding human beings. Skim milk should therefore be used in home cookery first, in every way possible, then if there is any surplus it should be given to the young stock on the farm. It is needless to say that none of it, either fresh or

Do not plant grain, and especially cowpeas, clover, alfalfa, or buckwheat,

your county agricultural agent or state experiment station for advice.

than when fed to animals and converted into meat. Surplus skim milk may be used economically to feed hogs, yet 160 pounds of it, which will produce 15 pounds of cheese, produce only 4.8 pounds of dressed pork if fed with corn. Skim milk if made into cottage cheese furnishes nearly seven times as much protein and nearly as much energy as the dressed pork it would produce. Of course the most nourishment is obtained when skim milk is used direct, either for drinking or cooking. As far as possible, therefore, skim milk should be used for human food, and only the excess fed to live stock.

Buttermilk is equal to skim milk for feeding hogs, while whey is half as valuable. Whey, being low in protein, is not well suited for young pigs and should be fed to older animals.

Ordinary grass pasture, or green rye, oats, sorghum, 'rape, clover, alfalfa, peas, or beans can take the place of skim milk after the little pigs get a start. Much green feed can be raised without greatly reducing the acreage of other crops.

Calves and pigs do well when some skim milk is fed, but they need it only for a short time and in limited quantities. Except when fed to very young animals, skim milk is fed most economically when supplemented with grain. For dairy calves sklm milk may be substituted in part for whole milk on the tenth day. If the calves are vigorous they should receive a little grain and hay at two weeks of age and it is safe to discontinue the skim milk five or six By substituting grain, green feed,

weeks later. buttermilk and whey for skim milk in animal feeding, much skim milk may be released for use in cooking; for condensing, or for making cottage cheese
