

TOO WEAK TO DO ANYTHING

A Serious Feminine Illness Remedied
By Lydia E. Pinkham's Vegetable Compound.

Casco, Wis.—"After the birth of each of my children I had displacement and was so weak I couldn't do anything I found a book about Lydia E. Pinkham's Vegetable Compound and so thought I would try it, and after taking it I soon felt better. That was fifteen years ago and I have felt well ever since except that I had a slight attack of the trouble some time ago and took some more of your Compound and was soon all right again. I always recommend your medicine and you may publish my testimonial for the benefit of other women."—Mrs. JULES BERO, Jr., R. 1, Box 99, Casco, Wis.

Lydia E. Pinkham's Vegetable Compound, made from native roots and herbs, contains no narcotic or harmful drugs, and today holds the record of being the most successful remedy for female ills in this country, and thousands of voluntary testimonials prove this fact. If you have the slightest doubt that Lydia E. Pinkham's Vegetable Compound will help you, write to Lydia E. Pinkham Medicine Co. (confidential) Lynn, Mass., for advice. Your letter will be opened, read and answered by a woman, and held in strict confidence.

Anything is wrong that is nearly right.

FRECKLES

Now is the Time to Get Rid of These Ugly Spots.

There is no longer the slightest need of feeling ashamed of your freckles. Othine—double strength—is guaranteed to remove these homely spots. Simply get an ounce of Othine—double strength—from your druggist, and apply a little of it at night and morning and you should soon see that even the worst freckles have begun to disappear, while the lighter ones have vanished entirely. It is seldom that more than one ounce is needed to completely clear the skin and gain a beautiful clear complexion.

Be sure to ask for the double strength Othine, as this is sold under guarantee of money back if it fails to remove freckles.

There is nothing so necessary as necessity.

Important to Mothers
Examine carefully every bottle of CASTORIA, that famous old remedy for infants and children, and see that it bears the signature of *Dr. J. C. Ayer*.

In Use for Over 30 Years.
Children Cry for Fletcher's Castoria

A low hedge is easily leaped over.

Case Seemed Hopeless

Use of Doan's, However, Brought Complete Recovery and the Recalcitrant Have Been Lasting.

"I used to think my back would surely break," says Mrs. H. S. Fix, prominent lodge woman, 240 Carpenter Street, Reading, Pa. "My back pained me constantly. I was as helpless as a babe and a nurse had to stay with me all the time. The kidney secretions burned and passed as often as every ten minutes. Sometimes my eyes were almost closed by the swollen sacs beneath them and my limbs, too, swelled twice their normal size. For almost a year I was practically helpless and never expected to get downstairs again. I had been told that nothing could be done for me, and had given up all hope of ever getting better. My condition was critical when I was told about Doan's Kidney Pills. I began using them and the results made me hopeful of getting well again. The pain in my back eased up and my swollen limbs started to look more natural. I kept on using Doan's and became entirely well. I owe my life to Doan's."

Sworn to before me.
HARRY WOLF, Notary Public.

Prayed for Cure Finds it After 10 Years

Food Would Sour and Boil—Teeth Like Chalk

Mr. Herbert M. Gessner writes from his home in Berlin, N. H.:
I had stomach trouble over ten years; kept getting worse. I tried everything for relief but it came back worse than ever. Last fall I got awfully bad; could only eat light loaf bread and tea. In January I got so bad that what I would eat would sour and boil; my teeth would be like chalk. I suffered terribly. I prayed every day for something to cure me. One day I read about EATONIC and told my wife to get me a box at the drug store as I was going to work at 4 p. m. I took one-third of it and began to feel relief; when it was three-fourths gone, I felt fine and when it was finished I had no pain. Wife got me another box, but I have felt the pain but twice. I used five tablets out of the new box and I have no more stomach trouble. Now I write to tell you how thankful I am that I heard of EATONIC. I feel like a new man; I eat what I like, drink plenty of water, and it never hurts me at all.

ECZEMA

Money back without question if HUNT'S SALVE fails to relieve the treatment of ITCH, ECZEMA, RINGWORM, TETTER or other itching skin diseases. Price 25c at druggists, or direct from A. B. Richards Medicine Co., Sherrill, N. Y.

HOW TO STOP HESSIAN FLY LOSSES

Showing the Life Cycle of the Hessian Fly Which Has Survived the Cold of Last Winter in Considerable Numbers, Entomologists of the United States Department of Agriculture Find.

(Prepared by the United States Department of Agriculture.)

Although there is no remedy for the Hessian fly when once it takes possession of a crop of wheat, a great deal can be done toward keeping the fly out of the wheat.

Since the Hessian fly is the most destructive insect enemy of wheat in the United States, control measures pay. There have been at least seven general outbreaks east of the Mississippi river in the past 37 years, and another is regarded as imminent by specialists of the bureau of entomology. The average annual damage to wheat throughout the United States from this insect is estimated at \$50,000,000.

How to Stop Losses.

The means of preventing loss, as summarized by the department, are these:

Practice crop rotation. Do not sow wheat on stubble if it is possible to avoid doing so.

Plow under all infested stubble, where practicable, soon after harvest. Plow ruined wheat as soon as possible after it has been determined that the crop will be a failure.

Destroy all volunteer wheat by harrowing, disking, plowing, or some other method.

Plow all land to be sown to wheat as early and deeply as existing conditions permit, and prepare a thoroughly pulverized and compacted seed bed. Conserve moisture against a period of drought at seeding time. Use good seed.

Fertilize.

Sow wheat during the fly-free period as advised by your farm adviser or state experiment station.

Adhere to these practices every year whether the fly is abundant or scarce. They will help to keep it scarce.

Community co-operation is essential if success is to be attained, because one infested field may furnish enough flies to damage the wheat for several miles around.

When to Sow Wheat.

Sowing wheat during the fly-free period means moderately late sowing. Experiments conducted over a great many years have shown that, in most localities, the safe date for sowing wheat to escape Hessian fly injury usually coincides with the proper time for sowing in order to obtain the largest yields independently of Hessian fly injury. These dates have been determined for certain localities as follows:

- In northern Michigan, soon after the 1st of September.
- In southern Michigan and northern Ohio, about September 20.
- In southern Ohio, after the first week in October.
- In extreme northern Illinois the safe period usually occurs from September 21 to 28.
- In central Illinois and Indiana, from September 21 to 30.
- In extreme southern Illinois, from September 30 to October 5.
- In central Kentucky, from October 5 to 15.
- In central Tennessee, from October 15 to 25.
- In Georgia and South Carolina, from October 25 to November 25.
- In northeastern Kansas the safe period is from October 1 to 10.
- In east-central Kansas, usually from October 1 to 20.
- In extreme southern Kansas and northern Oklahoma wheat should not be sown until the second week in October.
- This is true also of Virginia near sea level.
- October-sown wheat always enjoys the greatest freedom from the fly in Maryland, except in the mountainous regions where earlier planting is necessary.
- In southeastern Pennsylvania the safe period is during the last week of September, and practically the same corresponding delay in wheat sowing in the fall should be followed to the southward.

These dates are only approximate, and serve to show in a general way about the time when the fall brood of the fly disappears. All are dependent upon latitude, altitude, longitude, and other local conditions. The date varies considerably in broken or hilly country, even on the same farm, being appreciably later on the southern slope of a hill than on the northern slope of the same hill at the same elevation. Because of the fact that the larger part of the fall brood appears and is gone within a week or so, it is possible so to time the seeding of winter wheat as to avoid the Hessian fly, and this is one of the most practical and effective measures that can be applied.

A full discussion of the Hessian fly and how to prevent losses from it is contained in Farmers' Bulletin 1083, copies of which may be had free by writing the United States department of agriculture.

SELECTING LAND FOR PRODUCTION OF RICE

Soil Not Too Deficient in Organic Matter Is Best.

Abundant and Always Available Supply of Fresh Water Is of Much Importance—Provide Ample Drainage Facilities.

(Prepared by the United States Department of Agriculture.)

Rice produces its largest yields on clay soils that are not too deficient in organic matter. The land selected for rice culture should lie in level tracts that can be cheaply drained.

The crop requires an abundant and always available supply of fresh water, and to obtain good yields of high-grade rice ample drainage facilities must be provided.

The surface soil of the seed bed should be loose and finely pulverized to a depth of at least two inches. The field levees should be low, broad, and permanent and constructed on contour lines at distances which will hold the water at an average depth of five inches. They also should be seeded to rice. This will increase the cultivated

When slogged in the field rice looks somewhat like oats or wheat at a distance, but the method of growing is entirely different.

Area and leave no uncultivated strips in the field for the growth of weeds. The harvested rice should be put into strongly built shocks that should be well capped to protect the grain from the sun as well as from the rain. Thrashing should not be done until the rice has remained in the shock for at least two weeks.

Orchard Information

AUTUMN-FRUITING RASPBERRY

Ranere and Erskine Originated in United States and Are Now in Nursery Trade.

Fresh home-grown raspberries all summer long and until frost comes in the fall! That is the delightful prospect which the United States department of agriculture holds out to the gardener who will plant one or more of the autumn-fruiting varieties of raspberry plants which it recommends. The department points out that European gardeners have grown autumn-fruiting varieties for many years, and some of them are of higher quality. It is particularly important that the American gardener secure varieties that will survive in this country, since in many sections our climate is too severe for the European varieties.

Two good autumn-fruiting varieties, the Ranere (St. Regis) and Erskine (Erskine Park) have originated in the United States and are now in the nursery trade. The Ranere was found near Hammon, N. J., and was grown by the hundreds of acres on the sandy soils of southern New Jersey before being introduced into the trade. It is the principal commercial raspberry of New Jersey, and seems destined to become the leading sort along the Atlantic coast states as far south as southern Georgia. The variety may be found fruiting freely throughout the fall months in Atlanta, Ga., and even farther south where other varieties do not succeed.

In the cooler parts of the northern states, the Ranere produces fruit of too small size and too poor dessert quality to be of great value. However, the berries borne on the young shoots in the autumn are larger in size and better in quality than those of early summer, and if pruned after the English system, where all the old canes are cut out in late autumn or early spring, it should be desirable in many northern gardens.

The Erskine raspberry, which was found a resident of Lee, Mass., in a patch of the Marlboro, bears larger fruit than the Ranere. The fruit is also of better quality, and if it proves as hardy and bears as well throughout the northern states as it has under the care of the one who discovered it, it should be especially desirable. The Erskine seems to be a hybrid between the American and European red raspberries, and should be tried wherever the Cuthbert and Marlboro succeed.

Among the varieties of autumn-fruiting raspberries grown in England are Alexandra, Belle de Fontenay, Hallsham, Merville de Rouge, November Abundance, October Red, October Yellow, Semper Fidelis, Surprise d'Autonne, and Yellow Four Seasons. Only two of these sorts, the Belle de Fontenay and the Hallsham, are in the nursery trade in this country.

Two other European fall-fruiting sorts, which may perhaps be found in England, are in the nursery trade in this country, the La France and the

Cluster of Autumn-Fruiting Raspberry.

Souvenir de Desire Bruneau. The La France has been grown in gardens in Connecticut for many years without a name.

The experience of American fruit growers of the eastern United States for the last hundred years has been that no variety of raspberry introduced from Europe succeeds in eastern United States as a commercial sort. Introductions of European varieties have been made repeatedly, but none of them have yet succeeded under the rigorous eastern climate. Those who try these autumn-fruiting European varieties, therefore, should not expect them to be of value, except in the home garden. There, however, some of the hardier of these varieties may prove desirable. By removing most of the old canes and cutting those that remain to within one or two feet of the ground in late autumn or early spring a considerable quantity of fine-quality raspberries may be secured. The berries borne on the canes which are cut back will come after the season of the common sorts, and should last until the new shoots begin to bear.

European varieties are more likely to succeed in the mild humid sections of Oregon and Washington where the climate more nearly resembles that of parts of Europe than does that of the eastern states. Those interested in this group of raspberries probably will want to try the European sort.

If You Need a Medicine You Should Have the Best

Have you ever stopped to reason why it is that so many products that are extensively advertised, all at once drop out of sight and are soon forgotten? The reason is plain—the article did not fulfill the promises of the manufacturer. This applies more particularly to a medicine. A medicinal preparation that has real curative value almost sells itself, as like an endless chain system the remedy is recommended by those who have been benefited, to those who are in need of it. A prominent druggist says "Take for example Dr. Kilmer's Swamp-Root, a preparation I have sold for many years and never hesitate to recommend, for in almost every case it shows excellent results, as many of my customers testify. No other kidney remedy has so large a sale."

According to sworn statements and verified testimony of thousands who have used the preparation, the success of Dr. Kilmer's Swamp-Root is due to the fact, so many people claim, that it fulfills almost every wish in overcoming kidney, liver and bladder ailments; corrects urinary troubles and neutralizes the uric acid which causes rheumatism. You may receive a sample bottle of Swamp-Root by Parcel Post. Address Dr. Kilmer & Co., Binghamton, N. Y., and enclose ten cents; also mention this paper. Large and medium size bottles for sale at all drug stores.—Adv.

After a man has been once publicly cheered he is never the same.

GET READY FOR "FLU"

Keep Your Liver Active, Your System Purified and Free From Colds by Taking Calotabs, the Nauseless Calomel Tablets, that are Delightful, Safe and Sure.

Physicians and Druggists are advising their friends to keep their systems purified and their organs in perfect working order as a protection against the return of influenza. They know that a clogged up system and a lazy liver favor colds, influenza and serious complications.

To cut short a cold overnight and to prevent serious complications take one Calotab at bedtime with a swallow of water—that's all. No salts, no nausea, no griping, no sickening after effects. Next morning your cold has vanished, your liver is active, your system is purified and refreshed and you are feeling fine with a hearty appetite for breakfast. Eat what you please—no danger. Calotabs are sold only in original sealed packages, price thirty-five cents. Every druggist is authorized to refund your money if you are not perfectly delighted with Calotabs.—(Adv.)

To the wise an ounce of hint is worth a pound of subsequent advice.

If your eyes smart or feel scalded, Roman Eye Balsam applied upon going to bed is just the thing to relieve them.—Adv.

Economy is a brand of wealth that no one cares to inherit.
