LADY'S STOMACH WAS LIKE A GAS FACTORY; MEALS TURNED TO GAS

One lady said recently that her stomach used to be like a "gas factory!" That is, when she ate a meal it seemed to turn right into gas. She was always bloated, had awful headaches and constant irregular bowel action. Now, however, this lady says she is FREE OF STOMACH GAS and she says the change is due to taking INNER-AID. Her meals agree with her. No gas or bloating after eating. Headaches and constipation gone. "Oh! what relief!" states this lady. "Why don't other gas and constipation sufferers get INNER-AID. INNER-AID contains 12 Great Herbs; they cleanse bowels, clear gas from stomach, act on sluggish liver and kidneys. Miserable people soon feel different all over. So don't go on suffering! GET INNER-AID.

Certified Crop Dates Are Listed By Reams

Warren County Agent F. W. Reams has released the following list of dates, deadlines for the submission of applications by farmers to the North Carolina Crop Improvement Association for certification of 1946 crops.

Summer crops - tobacco, July 1; sweet potatoes, June 1; Irish potatoes and watermelons, May 15; strawberries, July 1.

Fall crops - cotton, corn, soybeans, peanuts, cowpeas, velvet beans, all August 1.

All spring crops, including wheat, oats, barley and rye, require applications dated April 15 or earlier.

Dr. Landis Bennett of the improvement association, said that no relaxation of the deadlines for application could be allowed.

Farmers making application for crop certification pay an annual membership fee of one dollar and a farm fee of three dollars. The latter fee covers from one to 10 acres of crops and will cover all crops which can be inspected in one trip on one farm. For all acreage above 10, an additional fee of 20 cents per acre is payable.

Hybrid corn, sweet and Irish potatoes are not subject to the above fee rules. Potato certification is taxed at the rate of three dollars for the first acre of fraction thereof and 50 cents per acre for each additional acre. Hybrid corn may be certified only if seed was obtained from the Foundation Seed Producers, Inc. Corn fees include: farm fee, \$6; field fee, \$4; acre fee (1 to 20 acres), \$1 per acre; (above 20 acres) 50 cents per acre.

All Foundation seed for the 1946 corn crop has been distributed.

The North Carolina Crop Improvement Association will conduct its next annual meeting in Shelby, probably in January, 47.

Green Blazes Way In Corn Production

C. B. Green of Durham County, who is perhaps the best corn grower in North Carolina, credits a resolution he made years ago as a farm boy for his success as a scientific farmer today.

Outstripping the state's average yield by 100 bushels per acre last year, Green grew 121 bushels of corn on a demonstration acre.

The Durham farmer recalls that when he was a youngster his father was a believer in intensive cultivation for corn. Year after year the lad followed the south end of a north-bound mule, and vice versa, plowing away long after the corn was tall enough for the blades to cut his face as he moved up and down the rows. Nursing the corn blade scratches, he resolved that at 21 he would never again cultivate a crop after it was tall enough to slash him in the face.

The big year arrived and young Green, now a "man", rented a "one-mule" corn crop from his dad and laid it by when the stalks were "hip high". His neighbors agreed with his father that the crop would "not yield enough to feed a chipmunk." His yield of 40 barrels surprised the neighborhood and gave him a start toward the purchase of a farm.

Late cultivation of corn, Green says, disturbs the root system of the plant, decreasing its power to draw plant food from the soil and reducing yields. It is by following this thesis, stopping cultivation early, plus the use of close spacing and proper fertilization, that the Durham farmer has managed phenomenal corn yields through the years.

His 1946 production goal is 125 bushels per acre.

TELEPHONES FROM EUROPE

T-4 Dan Campbell, Jr., son of Mr. and Mrs. Dan Campbell, who is stationed in Leghorn, Italy, with Hq. PBS, called home this week and talked to members of his family. Dan has been overseas one year, and called home while on tour in Switzerland. He hopes to be back in the States by Christmas.

Three new, disease-resistant varieties of flue-cured tobacco have been developed since 1903 at a cost of \$222,000. Their value to farmers is counted well into the millions of dollars annually.

Now... no wheat used in beer or ale

And wheat alone can solve the problem of feeding the world's hungry

Actually wheat has never been a large item in the brewing process—only $\frac{8}{10,000}$ of the entire U. S. wheat crop was used in 1945.

In accordance with United States Government policy, the brewing industry has used no wheat whatever since March 1, 1946.

OTHER MATERIALS CUT 30%

The other grains used have been reduced by 30%—that is, to 70% of the 1945 amount.

Wheat alone can solve the problem of feeding the hungry. The grains to which the industry is now restricted, are of a variety and grade not normally consumed by the people of the world as food.

LESS BEER AND ALE

Altogether, the brewing industry is using 30% less materials than in 1945. This results in a proportionately lower production. But since the current demand for beer and ale is about 25% greater than a year ago, the real shortage is nearer 50%.

Consequently, your dealer will not be able to supply you with all the beer and ale you would like. We know you will understand the reason for this.

Your attention is earnestly directed to the recommendations of President Truman's Famine Emergency Committee, which are summarized in the box below.

This statement tells in clear, simple terms what each of us individually can do to help during the emergency.

What the President's Famine Emergency Committee asks us all to do

1. Save and share wheat and fat products . . . Go light on all foods that take wheat, fats and oils—save breads, macaroni, cakes, cookies, pastries and deep-fried foods. Use drippings for pan-frying. Save salad oil—use boiled dressings.
2. Buy and serve more plentiful foods . . . Balance diets with the more plentiful foods, such as potatoes, fresh fruits and vegetables.
3. Waste NO food . . . Dress up today's leftovers for tomorrow. Make every crust count with melba toast, crumb-toppings, bread puddings and stuffings. Take no more than you can eat. Clean your plate. Turn in unusable fat salvage promptly.
