MORE ABOUT Farm Notes

Nitrogen is scarcer this year than it has been in a long time. Nitrogen is the most expensive plant food. Farmers could realize more profit over a period of years if they would follow a definite rotation and soil building system. Crotalaria is one of the best soil building summer legumes for this section. Crotalaria fits in well with certain other crops. Growing nitrogen is cheaper than buying it.

Farm land prices in North Carolina are 125 percent above prices in 1939. Just how long land prices will remain high no one knows, but it should serve a notice on prospects to buy only that land that can be paid in cash at the time of purchase.

Indications are that boll weevil will emerge in large numbers this year. Reports are already being made of finding weevils in buds of cotton. Close checks should be made of fields that border wooded areas. This can serve as a guide for treatment. Calcium of Arsenate has been used in the past as a mop and dust with varying degrees of success. Treatments for the control of boll weevil are now being made experimentally with Benzene Hexachloride and Toxaphene. Very good results has been obtained with these materials in tests conducted last year. It is suggested where these materials can be obtained that farmers try small portion of their crop with one of the dusts. Demonstrations are being conducted in the county this year.

One of the best places to plant a late garden is in the tobacco plant bed. As soon as the plant bed becomes available, it should be disked and planted to beans, tomatoes, etc. There is usually sufficient fertilizer already there. It should be used.

Watch for bean beetles on snapbeans and butter beans. Start dusting with rotenone before severe damage. Don't give up. If it rains soon after dusting, go back again after the rain. It pays to be

persistent. Use a dust gun that has a nozzle that will put the dust under the leaves.

Forty-two farmers made the tour to Coker's Pedigreed Seed Co. farm in Hartsville, S. C. Most of those making the trip were young farmers of the county who are taking the farm training course under G. I. Bill of Rights for World War II Veterans. This program on the county level is under the supervision of W. P. Phillips, Vocational Agriculture teacher. One cannot appreciate the real value of well bred seed until he understands the years of work involved in breeding a good variety.

FORD'S OUT FRONT with two great engines

Both with these BIG FORD features!

Fewer Engine Revolutions Per Turn of the Wheels

Yes, both SIX and V-8 have slower engine speeds than any other cars in their price range. The car "hustles" while the engine "loafs" for best economy, longer life!

4-Ring Pistons

Among the many V-8 features you get in the Ford SIX engine are light-weight aluminum pistons, with 4 oil-saving rings.

Balanced Carburetion

In both the modern SIX and famous V-8 you get new balanced downdraft carburetion, dual automatic spark control and super power combustion chambers—for performance and thrift!

Ford "50 year" Engineering

The Ford SIX is the only six-cylinder engine with the same basic engineering features as the V-8. No matter which Ford engine you select, the rest of the car is exactly the same.

THERE'S A Ford IN YOUR FUTURE
