

**"Milestone Model" and the Men Who Made It**

Twenty men whose combined crafts and skills are representative of the myriad trades contributing to production of a motor vehicle, pose at Flint, Mich., with a "milestone model"—the 20,000,000th unit produced by Chevrolet in its 35-year history. From the engineer with his designs and blueprints, to the polisher with his buffing tool, from the chemist to the hooded welder, these are the men who keep the nation's traffic arteries humming. Despite production difficulties, Chevrolet has produced its latest million cars and trucks in almost exactly a year.

**State College Hints To Farm Homemakers**

To make raisins extra plump and juicy for use in fruit cup or salad, rinse them in hot water.

In cakes and breads raisins spread their sweetness and flavor farther and have less tendency to sink if they are chopped. For chopping, use scissors dipped in hot water. Dust the chopped raisins with part of the sifted dry ingredients. This helps keep them bouyed up during the baking.

Once a package of raisins is opened, transfer the contents to a tightly covered jar or tin. This keeps them from drying out and becoming hard on the shelf. And in warm humid summer weather it keeps them from absorbing moisture and molding.

Seedless raisins are preferred for fruit cups, salads and many sauces, and are also widely used in baking.

When placing curtain ties, pull the window shade down to the desired height and use it for a marker to get the tie-back even.

Snaps go on easily if you sew all he snaps on one side in their places. Then rub chalk on the snaps and press against the side where the other half must be sewed. The chalk will mark the place exactly.

Raveled yarn from a knitted or crocheted garment can be made perfectly smooth by winding it around a board, then dampening it well with water. Let it dry on the board, and it will be as straight as new knitting yarn.

To help the family detect quickly the torn or ragged handkerchiefs they don't want to use in public, fold and iron the shabby ones in a triangle instead of the usual square.

**State College Answers Timely Farm Questions**

**QUESTION:** How is the best way to store cured meat?

**ANSWER:** Except for freezing, no satisfactory method has been devised to keep cured meats over long periods of time without considerable shrinkage. Wrapping the meat in moisture proof paper and placing it in a muslin sack will provide satisfactory protection for 4 or 5 months if the air in the smoke house is dry. Meat stored without any covering and placed in an ordinary smoke house tends to become hard and dry in few months. One method that has been recommended for keeping smoked ham is to place it in melted beef tallow until the covering is complete. By this method hams and shoulders should keep satisfactorily for a year and bacon from 3 to 6 months.

**QUESTION:** Is providing temporary pastures for hogs a good practice?

**ANSWER:** If suitable crops are used, excellent grazing can be provided during most of the year. Green feed is necessary and, when it is supplied in sufficient amounts, it will improve sanitary conditions, will act as a tonic, will encourage thrift and health, and is an excellent source of Vitamin A. In addition, the amount of grain and protein required will be reduced by the use of a palatable and succulent pasture.

In all cases temporary pastures are recommended, especially for nursing sows and pigs. Dry sows and boars can be safely turned on permanent pastures, if necessary, but other hogs should have access to temporary pastures only, in order to help control internal parasites.

**Will Be Held In Rocky Mount**

The 1948 joint annual meeting of the North Carolina Crop Improvement Association, North Carolina Foundation Seed Producer, Inc., and 100 Bushel Corn Club will be held January 8-9, at the Smith tobacco warehouse in Rocky Mount, according to Dr. R. P. Moore, director of the N. C. Crop Improvement Association.

The meeting will be sponsored by the Rocky Mount Chamber of Commerce, Dr. Moore said.

In addition to the host of interesting speeches that have been scheduled, and the educational and commercial exhibits that will be displayed, the usual big seed exposition with a long list of valuable prizes is expected to attract much attention.

Virtually every phase of producing certified seed will be discussed during the two-day meeting. Topics on this subject include: Ways in Which the Producer of Certified Seed Can Improve His Seed Program, Getting and Keeping Stored Grain Insects Under Control, and Harvesting and Drying Seed Crops.

No business, including poultry raising, can be efficiently and profitably operated without the keeping of accurate records.
