

**School Opening Calls For More Careful Driving**

Raleigh, N. C.—Readin', 'ritin', and 'rithmetic time is here again for North Carolina's youngsters. "School has either started—or is about to—everywhere, and once again we must increase our vigilance while driving." This was the warning issued today by Jeff B. Wilson, director of the Highway Safety Division of the North Carolina Department of Motor Vehicles, which is conducting its September highway safety campaign on child safety in traffic.

"School time," said Wilson, takes the child away from his mother's apron strings for a few hours a day and during part of that time he is a potential traffic accident victim unless we adults

protect him." Emphasis on child safety is particularly appropriate in September.

**COULD YOU STOP?**

NATIONAL SAFETY COUNCIL  
ber, according to the Department, because at no other time of the year are so many very young

children exposed for the first time to the dangers of the streets. In spite of careful teaching by their parents of correct pedestrian habits, children are still immature in their thinking, and warnings have very little meaning to them, the Department said.

"We can't over-estimate the importance of conscientious traffic training on the part of parents," Wilson said, "but we shouldn't forget that the responsibility for child safety will always lie heavier on the shoulders of the motorist than the parents."

In connection with the campaign, Wilson reminded drivers that during the first seven months of this year, 53 children were killed and 533 injured in motor vehicle accidents.

"Many of these deaths," Wilson said, "happened because motorists forgot to expect the unexpected while driving near schools, play-

grounds and residential districts. When a child's life is at stake we can't afford the luxury of laxness."

**Moisture Factor In Corn Yields**

Since much of the State's corn was blown down in recent storms, many farmers entered in the State corn contest will need to harvest their crop early to obtain an early estimate of the yield, according to Dr. E. R. Collins, in charge of agronomy extension at State College.

In general corn is still too wet for accurate estimates of yields to be made Dr. Collins says. However, he adds, yield estimates can be made early provided a moisture determination is made on the samples weighed.

Where a local moisture tester

is not available, the grower may obtain a free moisture test by sending at least one pint of shelled corn, in a sealed container, to Dr. Paul H. Harvey, State College Station, Raleigh.

Acres entered in the State contest can be harvested early provided one of the following methods is used.

(1) Dry all the corn in a commercial dryer before weighing, and determine the shelling percentage and moisture. The corn should be sealed in the dryer by the county contest committee, and weighed by the committee after it is dry.

(2) Weigh the corn wet. Dry 100 or more pounds to a reason-

able moisture content before determining the shelling percentage and moisture. This will give a factor for correcting to shelled corn with 15.5 moisture.

Dr. Collins says all high yields submitted in the State contest must be harvested and certified by a county committee composed of representatives of agricultural agencies and businessmen, with an out-of-county chairman. The acre must be measured by a county surveyor or a licensed surveyor.

Mr. and Mrs. A. M. Stack of Graham are doing a fine job of producing quality turkey meat, according to L. W. Herrick, Jr., of State College.

A herd of 38 purebred and high-grade Guernsey cows owned by L. H. McKay of Henderson County averaged 9500 pounds of milk and 426 pounds of butterfat per cow last year, says County Agent D. W. Bennett.
