

# Save These Rules - They May Save Your Life!

Your chances of escaping death or serious injury if an atom bomb drops in Raeford will depend mostly upon what you, yourself, do, both now and when an attack comes.

Civilian, defense officials, scientists, military men who studied deadly results of the A-bombs dropped on Japan agree that thousands of lives can be saved by taking simple precautions. You are urged to clip the instructions on this page. They have been compiled from official sources. Keep them, study them and have all members of your family do the same. Your life and theirs may depend upon it.

## When An Attack Comes

### Wherever you are:

1. Take shelter, underground, if possible.
2. Lie flat on your stomach, head buried in arms.
3. Cover up with something. Anything, preferably light in color, will help.
4. Put folded handkerchief over nose.
5. Don't look up. The brilliant light from an atomic fireball can blind you.
6. Stay away from windows, easily shattered material.

### If there is some warning:

1. Stay where you are. Don't try to reach loved ones. The chances are they are as well protected as you.
2. Don't lose your head. Calm those around you. Avoid panic at all cost.
3. Don't telephone. The lines will be busy with important messages.
4. Keep radio on for emergency announcements.

## After The Explosion

1. Stay sheltered, covered up for at least five minutes or until "all-clear" signal is given. There may be a second bomb.
2. Help any injured person near you.
3. Put out any fires started in your immediate area.
4. Listen to a radio for instructions. Use portable battery or car radio if electricity has been turned off or knocked out.
5. Stay in your own neighborhood if at all possible. Wait for instructions and assistance. Don't telephone.
6. Keep nose, mouth covered with handkerchief against contamination from radioactive dust.
7. Take less seriously injured to neighborhood first aid station or medical treatment center. Avoid moving seriously injured if possible.
8. Avoid food and water in open containers to prevent radiation poisoning. Stick to canned and bottled things. Wash them before opening. Don't smoke if there is chance area is contaminated.
9. If you are a volunteer defense worker, report to your post as soon as possible.
10. If you have no official duty and are physically able, report to nearest school, community center or public building for relief service.
11. Don't drive your car unless absolutely necessary. Traffic will de-

## The A-BOMB and YOU

Four survival secrets for atomic attack are listed by national civilian defense officials. They urge everyone to memorize these basic rules.

1. Try to get shielded. Get down in a basement if there is time. Caught in the open, take shelter alongside a building or in a ditch or gutter.
2. Drop flat on ground or floor. Flatten out at base of wall or bottom of a bank.
3. Bury your face in your arms. Hide eyes in crook of elbow. That will protect face from burns, flying objects, temporary blindness.
4. Don't rush outside right after a bombing. Wait a few minutes after an air burst, at least an hour if the bomb explodes on the ground to let radiation die down.

fire engines, rescue squads, doctors.

## To Protect Family At Home

Now:

1. Select a room or place in your own basement or in your immediate neighborhood for a shelter. Have your family survival spot near a strong wall or a main support, not in the center.
2. If possible stock the shelter with a flashlight, first aid kit, fire extinguisher, canned foods, water in containers, toilet necessities, and other essentials.
3. Fireproof your housekeeping by eliminating fire hazards. Heat from an atom explosion can start a paper blazing a mile and a half away.
4. If you live in an apartment, be sure you know location of stairs, all exits. Elevators may not be running.
5. When a raid alarm sounds, turn off gas, water, electricity. Close windows, doors, draw blinds. Then go to underground shelter immediately.

### After the Explosion:

1. Stay where you are or wait for an all-clear signal.
2. Keep doors and windows closed against radioactive dust. Cover broken windows, plug other openings from inside.
3. Don't strike matches or light fires. Gas may be escaping.
4. If your area is contaminated, change clothes. Take a shower, if water is available.
5. Keep pets indoors. They can track in radioactive dust. Remove

shoes when re-entering house for same reason.

6. Wash off any cans or containers of food as a precaution before opening.
7. If your house is badly damaged, go to nearest public building designated as neighborhood relief center.

## If You Are Outside

1. Take shelter underground if there is time. If not, get into a ditch, the gutter or against strong wall.
2. Lie down flat and cover up. Even a newspaper is some protection.
3. If you're in a car, pull off road and stop. If there's time, take cover in a ditch, against an embankment or behind any rise in the ground.
4. If caught in your car, get on the floor, roll up windows, cover up.

### After the explosion:

1. Don't try to continue on your way. Keep off roads and streets if possible.
2. Report to nearest school or public building for first aid if injured. If unhurt, report anyway for service as needed.
3. Obey orders of all defense officials.

### IF YOU'RE A SAFE DISTANCE FROM BLAST

1. Stay where you are. Prepare your home to receive victims. You can't be contaminated by contact with them.
2. Don't try to go to the disaster scene. You'll delay rescue and relief efforts.
3. Stay away from the telephone.
4. Listen to the radio for any instructions.

## QUEWHIFFLE NEWS

by Mrs. Ralph Cothran

Friends of Mrs. E. R. Pickler will be sorry to hear she is a patient at Moore County hospital for treatment.

Mrs. B. F. Hardister and Mrs. Ralph Cothran spent Thursday in Carthage with Miss Bertha Bryd.

"CASH IF YOU HAVE IT—CREDIT IF YOU NEED IT"

WHAT DO THESE EYES REVEAL?

Wise eyes, wide eyes . . . blue eyes and brown! From their eyes, what can you tell about the people? We'll give you a tip—these are capitalists' eyes! They belong to the owners of business-managed electric light and power companies.

What kind of people are these owners? Well, shown here, are the eyes of:

1. A teacher.
  2. A lawyer.
  3. A farmer.
  4. A housewife.
  5. A postman.
  6. A machinist.
- In other words, these are the eyes of your friends and neighbors.

It's like this: Several million Americans, in every walk of life, own the securities of electric companies like this one.

More than 30,000 different people own Carolina Power & Light Company. They live in every state of the Union, but more of them live in the Carolinas than in any other state. No one stockholder or any organized group of stockholders owns controlling interest in Carolina Power & Light Company. In fact, the largest single stockholder in the Company owns less than two per cent of the total shares.

CAROLINA POWER & LIGHT COMPANY
