SEVENTY FOUR YEARS AGO—This photograph, taken in 1901 at the Raeford Institute was brought to The News-Journal by Mrs. Lacy McFadyen, who is seeking help in identifying the young ladies pictured. Mrs. W.B. McQueen is the third on the left, and others are Hattie and Fannie McIntyre, Mary Watson, Beulah Campbell, Sudie Maxwell, and a Miss Jones, but Mrs. McFadyen needs help in placing the names with the faces.

## SCS Activities

By Frank Jeter, Jr.  
USDA - SCS

North Carolinians interested in recreational development, whether public officials or private developers, have a new and useful tool to help with their planning, it was disclosed by Jesse L. Hicks of Raleigh, who heads the Soil Conservation Service in North Carolina.

Surveys of potential for outdoor recreation have now been developed for each Tar Heel county, and booklets summarizing results of the survey have been published in 98 of North Carolina's hundred counties, with the other two due off the press in the near future. The booklets are a joint effort of the Soil Conservation Service, an agency of the U.S. Department of Agriculture, and many local and state agencies as well as concerned individuals in each county.

State Conservationist Hicks makes the point that the surveys "are not simply an inventory of what we have now in the fields of outdoor recreation, although data of existing facilities is provided. It also gives an accurate indication what we will be able to develop in future years, and provides guidance on the directions that recreation enterprises in various counties should take."

Under this program, the data is published in a bound book for each county. Most books have photographs as illustrations, to show types of recreation with high potential, and all have Soil Conservation Service maps which show sites for recreation in the county. A wide range of activities, actual or potential, is surveyed in each report. Climate, scenic areas, places affording natural environment, lakes and streams are all included. Soil characteristics, important for deciding the best use of land, are also covered, as well as proximity and access of areas where high potential for recreation exists.

Present land use plans are included, along with population of people who live close enough to utilize recreation facilities.

One section covers historic areas, with their proven appeal. Which areas present the best potential for vacation cabins? Homesites? What about camping? Where are the best picnic facilities and localities for field sports? All these questions are answered in the surveys, and accurate cartographic maps show exact locations.

Some favorite types of recreation in North Carolina—present or potential—are included. Golfers can

get data on present courses and localities where future courses may be built.

Hunters are provided information on large and small game, including birds. What is the future for game? A separate section on game preserves, increasingly popular, is also featured.

Fishing waters, riding stables, vacation farms, and places for boating, swimming, water skiing, and other aquatic sports are also included—with present facilities and future potential evaluated. Opportunities for enjoyment are a major purpose. But economic data useful to those preparing to invest in future recreational facilities is also provided. "This will give a good indication whether a recreational business will succeed or fail in a given area," was one comment on this data.

In reporting on completion of the statewide project, State Conservationist Jesse Hicks applauded "the wonderful spirit of cooperation" among sponsoring agencies and individuals "which really made the survey successful. It could not have been accomplished without a lot of interested people working together," he said.

The booklet containing this information on Hoke County is available at the local Soil Conservation Service Office located in the Federal Building.

## Hoke Director Attends Meet

William T. Niven, Hoke County civil preparedness coordinator, attended a plans and operation workshop July 15-17 at Appalachian State University's Center for Continuing Education.

Sponsored by the N.C. Division of Civil Preparedness, the meeting was attended by 34 civil preparedness officials of Northwest North Carolina.

The workshop was designed to help local civil preparedness coordinators update county-wide plans for emergency assistance and disaster relief.

The workshop participants attended sessions on state disaster relief and assistance plans, emergency operations for war and planning a county-wide Emergency Operations Center.

## Is It Really Cheaper To Own Your Own Telephone System?

Before you buy telephone equipment from a catalog, store, or salesman—BE SURE YOU KNOW ALL THE FACTS.

Don't sign a contract for a new phone system without the answers to these questions:

1. Who will be responsible for taxes and insurance?
2. Are there additional charges for maintenance service?
3. Who replaces equipment damaged by fire or flood?
4. What happens if you need to make additions or changes?
5. Can you get emergency repairs 7 days a week?

Only through a special connecting device may privately owned and maintained telephone systems be attached to the telephone company's facilities. Such devices are provided by the telephone company at rates approved by the N.C. Utilities Commission.

Unfortunately, some current

advertising does give the impression that it is cheaper to own your own telephone system.

However, the fact is that any customer owned system must be installed in compliance with approved tariffs. These tariffs require a connecting device on all such installations.

Some state regulatory agencies have expressed concern about the quality of service being rendered by customer-owned equipment. Also of concern is the effect which customer-owned equipment could have on the rates charged by telephone companies to all their customers.

Investment costs, service costs, replacement costs, and taxes are items you don't contend with when the telephone company provides your telephone equipment.

Just call your local Carolina Telephone business office. They'll give you straight answers.
