COMMENT

It might be interesting to some people to know that it was some time after 1864 that people quit wearing homemade shoes, and every family no matter how rich had house flies until doors and windows were screened and that was a long time after 1900 came in.

P.S. People who never had flies don't know how to appreciate the lowly screen. Children ask grandmother or great grandmother about this little black fly that didn't bite or sting yet was a terrible pest.

REPAIR—City water was shut off to a portion of the downtown area for two hours Monday morning while repair crews worked at the Magnolia St. and W. Edinborough Ave. intersection. A hit and run driver knocked down the fire hydrant in front of the Presbyterian Church over the weekend.

Hoke ASCS

By Thomas R. Burgess

USDA ANNOUNCES 1976 TOBACCO LOAN PROGRAM — The U.S. Department of Agriculture has announced the 1976 crop loan program for tobacco. The 1976 crop loan levels are about 13.7 percent higher than 1975 crop levels. As required by the Agricultural Act of 1949, the higher loan levels reflect increases in the index of prices paid by farmers, including wage rates, interest, and taxes.

As in the past, advances will be made to producer associations under contracts with commodity Credit Corporation. To be eligible producers will be required to certify that they have not used restricted pesticides (DDT, TDE, Toxaphene, and endrin) on their 1976 crop tobacco. Eligibility restrictions on tobacco produced on federally-owned land are removed. The associations to which loans are made are authorized to withhold one cent per pound from the advances to producers to help defray association administration expenses.

DISASTER SHOULD BE REPORTED — Farmers should report failure of cotton, feed grain and/or wheat to ASCS Office in case of a natural disaster or loss beyond their control. Farmers should keep in mind that they will not be eligible for payment if the land is put to other uses before a representative of the ASCS Office visits the farm. Please contact the ASCS Office and file a report before destroying any part of the crop that failed. After appraisal is completed the acreages will be released by ASCS for other uses.

HEED LABEL INSTRUCTIONS. AG-CHEM USERS ADVISED — Farmers and gardeners are reminded by the National Safety Council (NSC), to read and heed label instructions before using fertilizers and pesticides. To prevent accidental injury and illness, NSC suggests that users of agriculture-chemicals observe the following pointers. •Wear appropriate protective garments. •Rinse and drain empty pesticide and fertilizer containers three times. •Make sure the dosage is correct. •Don't smoke or eat until you have washed and changed clothing. •Keep children and non-workers out of the mixing

areas and plots being treated. STORAGE FACILITY AND DRYING EQUIPMENT LOAN PROGRAM — Farmers should take inventory of their storage facilities and drying equipment and determine if additional storage or drying equipment will be needed when they harvest their 1976 grain crops.

Loans are available to producers to purchase needed storage facilities and drying equipment. The loans are based on 70% of the net cost, excluding the foundation and electrical wiring, and run for a period of five years with four annual installments. The interest rate applicable to these loans is set at 7.50%. This interest rate is subject to change on April 1, 1977. Persons needing storage and/or drying equipment and who are

interested in obtaining a loan are urged to contact the county ASCS office to make application. ELIGIBILITY FOR PARTICIPATION IN ALL PROGRAMS ADMINISTERED BY ASCS IS ESTABLISHED UNDER LAW WITHOUT REGARD TO RACE, COLOR, CREED, NATIONAL ORIGIN OR SEX.

Housing Tips

By Willie Featherstone, Jr.

Latex paints are becoming increasingly popular for repainting the house exterior. A question that often comes up is "Will the paint bond to the existing paint?" A new Forest Service Research Note describes a simple test which can be used to answer the question. Prepare the old surface for repainting by scraping off loose paint and

cleaning the surface with a mildewicide and then water. Then leave to dry for two or three days before painting a small area of old paint surface with the latex paint. Allow it to dry for at least 24 hours, then firmly press one end of an adhesive type of tape about 2 1/4 inches long by 1 inch wide onto the dry freshly painted surface. Withdraw the tape quickly. If it is free of paint, repainting can be started. If the next latex paint adheres to the tape, you need to apply an oil-base primer before repainting with latex.
