A very good book on nutrition is 'A Matter of Life' by W. Coda Martin, M.D. One item he relates is that our flour mills remove the 'wheat germ' in milling white flour. This removes the most nutritious portion of the grain - the embryo of the future plant, containing all the essential proteins, important B-complex vitamins, and many trace minerals. While 'enriched' flour replaces 4 nutrients synthetically to the flour, the milling process removed 14 - all 12 of the B vitamin factors, also vitamin E, the wheat germ oil, and much of the minerals and proteins. Whole grain flours are much more nutritious than white flour.
