the decorations were being made this week by the students, with their teachers supervising. The float will bear the words

home remedies and manufactured

products to date indicate none of

the additives provided any clear cut

benefits over use of water alone for

needle retention or for maintaining

moisture content of twigs and needles. The use of additives also

to use in the home? A: We believe that cut trees

properly stored outdoors and then

maintained in a continuous water supply indoors present no real hazard.

Q: Are cut Christmas trees safe

dilutes the water.

Hoke Agricultural Extension News

by Willie Featherstone, Jr. County Extension Chairman

HOW TO KEEP YOUR CHRIST-MAS TREE FRESH

Included in today's news article are often-asked questions about the handling and care of Christmas trees. The answers provided are to help you have a safe and attractive Christmas tree for a longer period

of time. QUESTION: Why do some cut Christmas trees shed their needles

when brought indoors? ANSWER: Experience and research indicate that species, genetic differences within species, climatic factors, when the trees were harvested, fertilization practices and probably the biggest reasons, moisture content of twigs and foilage are involved. Eastern White Pine and Virginia Pine along with true Firs including Fraser and Douglas Fir generally retain their needles without serious loss after harvest if the out serious loss after harvest if the trees are properly cared for. On the other hand White and Norway Spruce can shed their needles prolifically after being indoors only a few days. All trees will normally shed excessively if allowed to dry out. Based on research conducted by university researchers in Con-necticut and other institutions. needle loss can be minimized by placing trees in water as soon as possible and keeping a supply of water for the tree's use throughout the Christmas season.

Q: How much water will a cut tree use indoors?

A: In general the larger the tree and the warmer and dryer the indoor atmosphere the more water the cut tree will use or transpire. Research conducted on White Spruce and White Pine for a period of three weeks indicated that medium dense trees six feet in height can use from one to two and half pints daily. Initial water consumption was two to three times greater than the three-week aver-age, especially for the larger trees.

Q: Is there anything that I can add to water to make my Christmas tree last longer? A: Not really, a continuous water

supply will maintain or increase the moisture content of twigs or needles and will help prevent needle loss. However, research conducted with

Della Maynor Named To **State Council**

Della Maynor, Hoke County register of deeds is one of the 20 people Gov. James Hunt has ap-pointed members of the North Carolina Council on the Status of Women

Miss Maynor's team will run till next June 30.

Miss Maynor is a member of the Hoke County United Way Board of Directors and of the Hoke County Youth Task Force.

"Joy to the World" on the sides of its bed, and eight of the students will be in costumes of different nations, illustrating ways the coun-tries celebrate Christmas. With them will be a large, handmade globe of the world.

On Tuesday morning, students in the classes of Miss Janice Brock, Miss Carolyn Ronalter, Mrs. Carol Pagan and Mrs. Gwen Reeves were preparing the "skirt" of the float, working in the old school maintenance shop building near Upchurch Junior High School. They were fixing newspapers to make the skirt, and later sprayed the papers with color.

Five inmates of Sandhills Youth Center at McCain came over Tuesday afternoon and helped them.

At Upchurch, meanwhile, the students of Mrs. Marsha Currin, Miss Vicki Woddell and Mrs. Debra Olson were building the globe.

A total of 25 students in the classes participated in preparing the decorations
