

From School Teacher to Great Eminence

A young man who was brought up on a farm, qualified for district school teacher, then managed to save enough money to put him thru medical college.

Later, he moved to Buffalo, N. Y., and today the name of this man, Dr. R. V. Pierce, is known throughout the world. His Golden Medical

Discovery is the best known blood medicine and tonic. More than fifty million bottles have been sold. If your dealer does not sell the Discovery, in liquid or tablets, you can obtain a pkg. of the tablets by sending 65c to the Dr. Pierce Clinic, in Buffalo, N. Y. Also write for free medical advice.

CORNS

In one minute the pain is Gone!

Gets at the cause of corns

Dr. Scholl's Zino-pads work like magic, because they remove the cause—pressing or rubbing of shoes. The pain goes instantly. Amateurs paring or burning with "drops" (acid) is dangerous—and doesn't stop the cause. Zino-pads are safe, sure, antiseptic, healing. They protect while they heal. Get a box at your druggist's or shoe dealer's—35c.

Put one on—the pain is gone

Great Britain, the United States and Japan represent about 90 per cent of the world's naval strength.

DEMAND "BAYER" ASPIRIN

Aspirin Marked With "Bayer Cross" Has Been Proved Safe by Millions.

Warning! Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians for 26 years. Say "Bayer" when you buy Aspirin. Imitations may prove dangerous.—Adv.

After the rains on some motor roads near London a sand sprinkler is used to make the roads safe for travel.

Cut, cure Comforts Baby's Skin
When red, rough and itching, by hot baths of Cuticura Soap and touches of Cuticura Ointment. Also make use now and then of that exquisitely scented dusting powder, Cuticura Talcum, one of the indispensable Cuticura Toilet Trio.—Advertisement.

Man wants but little here below, but he is afraid to try living by that plan if he can get more.

Baby's Fretting Often Due To Stomach Disorders

If baby's stomach is out of order, he cannot assimilate his food and often times becomes nervous and upset. In such cases there is no need to become worried. Thousands of mothers have found that a dose of two of Teethingin will quickly end Baby's fretting by dispelling all traces of gas and indigestion.

"I have four little ones," writes Mrs. J. M. Butler, of Gilmer, Texas, "and used Teethingin with all of them. When baby is fretful and nervous I give her a dose and she is soon laughing and playing."

Teethingin is the famous prescription of Dr. C. J. Moffett. It contains no opiates or harmful drugs of any sort. Can be safely given to the youngest of children. For over 50 years grateful mothers have been testifying to the priceless qualities of Teethingin in relieving the distressing ills of babyhood.

FARM STOCK

BRIGHT PROSPECTS FOR BEEF CATTLE

(Prepared by the United States Department of Agriculture.)

Higher prices for beef cattle are in prospect within the next 18 months for both the feeders and range producers, according to the report on the outlook for beef cattle made by the Department of Agriculture. An upward trend is probable over the next two or three years, the department says. The numbers of breeding stock of cattle on feed, and of young stock seem to be materially lower than for several years so that reduction in the market movement is expected.

While no considerable reduction in the number of stock held by range men was made for some time after the break of 1920, the number of steers has been reduced during the last three or four years accompanied by a less rapid reduction in the number of cows. The increasing number of cows and heifers now being slaughtered indicates further reductions in breeding stock still being made. It does not appear, therefore, that the number of cows is sufficient to long maintain the present high rate of slaughter, the report shows.

All indications are for smaller supplies of cattle on the markets during the next few months also, the department states. The movement of all cattle so far during 1926 has been less than for the same periods last year, and the best information from the range states indicates a considerably lighter run of grass cattle during the next three months than a year ago.

In the Southwest there are lighter supplies of cattle available than a year ago. As the 1926 calf crop was good, the number of calves to be offered from the Southwest this fall will compare favorably with the past three years, however. Good range conditions and an improved situation have placed the Southwestern cattlemen in a position so they would not be forced to sell on an unfavorable market.

The number of cattle in certain areas of the northern Great Plains region, which have recently suffered from drought, has been so reduced already that light movement may be expected next year, the report states, and there is a possibility of the cattlemen in that area becoming active buyers with changing conditions. The full extent of the reductions which have taken place should be apparent by the autumn of 1927 and by that time improved conditions might prompt restocking of the ranges which would still further reduce market supplies.

No competition from foreign supplies of beef or cattle which would affect the situation are seen. Present indications are that consumptive demand for beef during the next 12 months will continue good, although no better and possibly somewhat below that of the past year. Increasing competition from hogs, especially during 1927, will also have some influence on beef prices.

The situation in regard to the probable demand for feeder cattle this fall is uncertain. The margin between the present price of fed cattle and feeder cattle is exceptionally narrow, and the present prospects are for a corn crop considerably smaller than last year, but there will be a heavy carry-over of old corn and the number of hogs is still low.

Prospects for a fair supply of corn, only a slight increase in the number of hogs to be fed, and a decrease in cattle available for feeding will tend to maintain the price of feeders on a level slightly higher than that which prevailed in the fall of 1925, according to the report. Lighter-weight cattle in the feedlots will enable feeders to distribute market supplies over a longer period and in accordance with the movement of prices. Together with the reduced supplies, this may result in higher prices of fed cattle during the winter and spring of 1927 than a year earlier. Heavy-fed cattle will top the market next year if feeders swing too heavily to light cattle this fall and winter. On the fall of 1927 range cattle prices probably will show a marked effect of the impending shortage and average higher than for several years past.

Live Stock Notes

A plentiful water supply is as necessary as any other item of food in the ration of either cow or pig.

Failure to dock and castrate ram lambs costs sheep raisers millions of dollars every year.

Many cattle feeders value stags for fattening older cattle, but have doubted its value for calves.

The KITCHEN CABINET

(© 1926, Western Newspaper Union.)

I would be true, for there are those who trust me;
I would be pure, for there are those who care.
I would be strong, for there is much to suffer;
I would be brave, for there is much to dare.
—H. A. Walters.

WHEN ENTERTAINING FRIENDS

We all wish to extend courtesies to our friends, and when we entertain them it is a pleasure to serve food that is pleasing, and if possible, unusual. Those who are deprived of home cooking enjoy best of all a good meal of substantial, well prepared food. The wise hostess fits the dinner to suit the needs and tastes of her guests.

There is no main dish more appetizing than a good ham well baked, served with creamed potatoes and glazed sweet potatoes, with a simple salad of some seasonable combination with the following dessert:

Hamburg Cream With Fruit Juice.—Put a cupful of raspberry and currant juice into a double boiler over the fire. Beat the yolks of nine eggs, add a cupful of sugar and beat again; add the juice scalding hot to the eggs and sugar, very slowly; return to the boiler to cook until thick. Remove from the heat and fold in the stiffly beaten whites of nine eggs. Serve chilled, in sherbet glasses with macaroons.

Frozen Boston Pudding.—Grate half a loaf of Boston brown bread that is at least a day old, pour over it a pint of hot cream, allowing it to stand until cold. Prepare a rich boiled custard by scalding a pint of milk and adding three well-beaten eggs and two tablespoonfuls of sugar. Cook until the custard coats the spoon. Cool, add the bread crumbs and half a pint of sweetened whipped cream. Flavor with a few drops of almond extract and turn at once into the freezer. When frozen, remove the cream to a flat pudding dish, cover with macaroon crumbs and bury in ice and salt until serving time.

Ginger Cobbler.—Cut into dice one pared cucumber; slice two oranges, three lemons, sprinkle with powdered sugar, add a cupful of ginger sirup and put on ice for two hours. Add two quarts of ginger ale, a cupful of sugar sirup and pour over a block of ice in a punch bowl. Garnish with raspberries or other bright fruit.

Bananas dipped into salad dressing then rolled in chopped nuts and served with mayonnaise, on lettuce, are liked.

Seasonable Dishes.
Bananas are to be found in almost any market at any season of the year.

Baked Bananas.—Remove the skins from five bananas, cut in halves lengthwise, and put into a shallow pan. Melt two tablespoonfuls of butter, add a third of a cupful of sugar and two tablespoonfuls of lemon juice. Baste the bananas with one-half the mixture. Bake 20 minutes in a slow oven, basting during the baking with the remainder of the mixture.

Fillets of Beef With Bananas.—Cook the fillets cut one and one-quarter inch thick and arrange on a platter, pouring over them the liquor from the pan. Sauté quarters of bananas in a small amount of butter until cooked and place a piece of banana on each fillet when serving.

Banana Salads.—Mix finely cut bananas with canned or fresh cooked green peas and French dressing. Serve in the banana skins on lettuce.

Canterbury Chicken.—Cook three and one-half tablespoonfuls of butter with one of finely chopped onion, until yellow, stirring to prevent burning. Add one tablespoonful of cornstarch and one and one-half cupfuls of chicken stock. Bring to the boiling point, add one-half tablespoonful of lemon juice, three-fourths of a teaspoonful of salt, a few dashes of paprika, one-half cupful of celery cut into small pieces and one and one-half cupfuls of chopped chicken. Serve very hot, garnish with toast points and parsley.

Prune Toast.—Take one cupful each of prune juice and stoned stewed prunes, the juice of two oranges, two tablespoonfuls of cornstarch. Heat the prune juice, add the prunes and orange juice, mix the cornstarch to a paste with a little of the juice and add to the mixture. Cook over water until well cooked and thickened. Pour over well-battered slices of toast and serve at once.

Mint may be steeped and strained and kept to add to drinks of lemonade.

Heidi Maxwell

The DAIRY

DAIRY LOSSES CUT BY MILK COOLING

A large proportion of the loss from sour milk, high bacteria counts, and low quality butter and cheeses, might be avoided through prompt and thorough cooling of milk at the dairy farm, asserts the dairy department of the College of Agriculture, New Brunswick. All milk should be cooled to 50 degrees F. or lower and should be kept at that temperature until delivered at the receiving plant.

In the matter of dairy temperatures one should never guess. A good thermometer will always pay for itself in a short time. One can of rejected milk will cost more than four or five good thermometers.

To cool milk to 50 degrees F. or below, ice is nearly always necessary. If ice cannot possibly be had, only the coldest water should be used. This means water direct from the well or spring unless a colder source is available. Running surface water or tank stored water is never very cold. If ice is not to be had, it is desirable to arrange the equipment so that spring water may run constantly through the milk storage tank, or so that all water pumped for farm stock passes first through the tank.

The cooling of morning's milk is the important problem just now. A surface cooler will save time and ice, and will enable the farmer to cool it at the farm.

Once the milk has been cooled to 50 degrees F. or below, if it is to be held, a cooling tank in the milk house becomes a necessity for final cooling and storage. Milk plant operators can advise farmers as to the best types of coolers, cooling tanks and milk houses to meet the requirements of their respective companies and boards of health.

Bloody Milk Caused by Ruptured Blood Vessel

When a cow gives bloody milk it is due to the rupture of a small blood vessel in one or more of the quarters. This condition usually leaves as soon as the cause is removed.

Immediately after freshening this condition is caused by the inflammation in the udder and leaves as soon as the inflammation leaves the udder. When it takes place later in the lactation, it is usually caused by an injury of some kind to the udder. It may be due to lying on a cement floor or by bumps from calves or other cows in the herd. To effect a cure the cause must be removed. Watch the cow carefully to find how she injures the affected quarter and then remove the cause and you should have no further trouble with bloody milk.

Some Grain Is Essential When Pasture Gets Short

To keep up the milk flow of his herd the dairyman who has no sudan-grass pasture must increase the grain feed when natural grass pasture gets short. Due to the exertion a cow may actually require more feed when on a sparse pasture than when shut in a dry lot. All cows giving over three gallons of milk daily should get a pound of grain for each five pounds of milk while on pasture. Cows heavily dry and not due to freshen within two months can economically go without grain at present. The chore of milking cows in fly time can be avoided by breeding in late December.

Dairying More Popular

Whenever one half finds dairying profitable, the other half fears that it may be overdone. Hence the warnings now being broadcast that dairying is up in the clouds and due to come down soon. But folks go right along paying their bills by means of a few good cows and hens just as they have for many years past. Quite the opposite, there are now many signs indicating that dairying will have even more popularity before it has less.

Dairy Facts

Great alfalfa has a very pronounced off-flavor in the milk if fed an hour or two before milking, but no effect after 2 1/2 hours.

There is no long waiting period with the dairy cow—she pays as she goes. The cream and the milk sold are usually paid for each week or each month.

Milk utensils should never be left in the sun until after they are carefully cleaned and dried. The use of water that contains will save time and labor and insure disinfection.

Her Hair Fairly SPARKLES Now!

The woman who knows what to do after waving her hair doesn't fear the effect of hot irons. Nor of frequent washings. A few drops of Danderine—on comb or towel—and the hair is soft and lustrous, and behaves beautifully.

A bit of Danderine rubbed lightly into the scalp is the one sure way to dissolve every particle of dandruff. But a few drops more make a dressing that is simply marvelous. A sheen that rivals brillianine, and no grease!

One Bottle Free

Every druggist in America has Danderine at 85c. Or, to prove its marvelous properties, your first bottle free now!
