FRIDAY, AUGUST 3, 1895.

INDUSTRIAL SCHOOLS.
We publish elsewhere a digest of the report of the committee appointed by the Georgia Legislature to investigate the subject of technical training schools and note with pleasure that this committee after thorough investigation gave them an unequalled endorsement.

It is humiliating that the plans for the larger number of public buildings and fine residences built in the North or by Northern architects now resident in the South, while one-tenth of the machinery and implements of various kinds used in our different industries and households are imported.

From the following paragraphs in our report it will be seen that our representatives have impressed his well-known sentiments upon the committee: 'The committee do not see any reason why the policy of the State should be so completely in the hands of a few men as to be able to give a final word upon the subject of industrial schools.'

Everything that can be done should be done to train the brains and hands of our young men, and we will add our young women, too, to our labor, for on them the South must depend for our industrial independence and permanent success in competition with other sections.

Hon. M. C. Butler, of South Carolina, is taking a great deal of interest in the question in that State, and has written several able papers upon it. In the last, which appeared in the Charleston News and Courier, he says that it costs the State, under the present defective system of working, \$1,500,000 a year to work the much money thrown away.

In Great Britain and Ireland, with a population of 27,000,000, there are 12,000 lawyers, or one to every 2,250 people. In the United States, with 50,000,000 inhabitants, there are 50,000 lawyers, or one to every 1,000 inhabitants, but still there is room enough at the top.

The Hickory Press has been indulging in some dog statistics. Finding the number of dogs at 400,000, and the cost of feeding them per annum at \$10 each it runs up a board bill of \$4,000,000. Add to this \$100,000 a year in destruction of sheep, and \$100,000 loss caused by discouraging sheep husbandry, and we have a grand total debit to the State of \$4,200,000.

Mr. Gysel, a distinguished Catholic priest from England, arrived in New York Monday, and will travel through America delivering lectures on various topics. He is said to be the typical modern churchman described by Disraeli in 'Lothbald,' and has measured strength with Gladstone in polemical contests.

The report of the Legislative Committee on Technology is an admirable document, and reflects credit upon its authors. It embodies the views of the visiting members of the committee, as given in their report to the Georgia Legislature, and especially our educational system, with which he is much impressed.

Technical education is necessary to develop our resources, to develop our manufacturers, utilize our resources, and keep our State's prestige. We must either educate our own people or import others who are naturally skilled.

Technical education dignifies labor by opening up new and remunerative channels for its performance. Technical education is necessary for the people in receiving the sanction and encouragement of the greatest minds in the greatest governments on earth.

Technical education leads to dignified labor, not only by giving grades to students, but in the secondary results; for, by affording the surest means to develop the State's resources, it will naturally tend to increase the cost of living, and give employment to the idle and indigent.

Technical education is practical education, as distinguished from the mere theoretical. It is addressed directly to the wants and necessities of man. It comprehends the best means of solving technical questions, of increasing industry, and of giving employment to the idle and indigent.

Technical education is not the problem of higher education now so much that needs to be solved. It is the problem of practical education. It is the question of filling the gap in our State's progress.

Technical education is not the problem of higher education now so much that needs to be solved. It is the problem of practical education. It is the question of filling the gap in our State's progress.

Earthquakes and Volcanoes.

The frightful disaster at the beautiful island of Iochia, the Tachia range of mountains in Buchanan's Range, is only the forerunner of catastrophes equally fearful. There is no foretelling what Yeuvevius may do. Eleven years ago a series of earthquakes preceded the eruption of 1872.

Although it is true that earthquakes have long ceased to be seats of volcanic action, and that upheavals or depressions of strata in place at vast distances from volcanic centers, it is indubitable that the vast majority of earthquakes have not only occurred in the neighborhood of volcanoes, but have preceded great eruptions.

It has been clearly established that by a careful study of the superficial effects of earthquake vibrations, the points at which the vibrations originated may be determined, and that earthquakes shocks never originate at a greater depth than 50 miles below the earth's surface.

The destruction of Ohio preceded the recent disturbances in Yeuvevius; and although Ohio is situated at a far greater distance from the volcanic center of Yeuvevius, it is probable that the volcanic had their birth in similar underground disturbances.

One remarkable thing regarding volcanic eruptions is that an interval of years sometimes intervenes between the eruptions, and the definitive cessation of volcanic activity is not always permanent. Thus both Heracleum and Pompeii were nearly destroyed by an eruption in A. D. 63, but the great eruption which occurred in 79 A. D. re-opened until sixteen years later.

The volcanic eruption of the island of Iochia, and the volcanic phenomena of the island of Iochia, and the volcanic phenomena of the island of Iochia, and the volcanic phenomena of the island of Iochia.

Half a teaspoonful of common table salt dissolved in a little cold water, and drunk, will instantly relieve a headache or dizziness. If taken every morning before breakfast, increasing the quantity gradually to a teaspoonful of salt in a glass of water, it will in a few days cure any ordinary case of dizziness.

Mustard is another valuable remedy. No family should be without it. Two or three teaspoonfuls of ground mustard stirred into half pint of water, and swallowed, will relieve a headache or dizziness.
