A recent bulletin of the department of agriculture points out the fact that within the past 15 years there has been a complete change in the chief insect foe of the cotton plant. Previous to 1881 the cotton worm was not only the principal, but almost the sole, insect depredator dreaded on the cotton planta tions. Since that year the cotton worm has gradually disappeared, and a new enemy to the cotton plant, the boll-worm, has taken its place. It seems that during my sick-ness the Observers has had a hard time with comers and goers who want relief. The trouble is—blame 'em—they will not take what they say they want.
