East Carolina Teachers Training School

A State school to train teachers for the public schools of North Carolina. Every energy is directed to this one purpose. Tuition free to all who agree to teach. Fall Term begins September 22, 1914.

For catalogue and other information address,

ROBT. H. WRIGHT, President,
GREENVILLE, N. C.

The Woman Who Writes

and with stationary procured here is in no danger of having her letters mutilated as to correct form anyway we have just the right shape, size and tint of paper, the ink that doesn't splutter. Our stationary is approved by people who know.

Coward-Wooten Drug Company

CRIME THAT WAS HUSHED UP

For Various Reasons the Police Were Not Informed of a Recent Daring Robbery.

There was a robbery recently at a home in Broadway, south of Thirty-second street, that was not reported to the police, relates the Indianapolis News. Really there was no need to have the police coveting about the place—the person who was robbed expressed no wish for their assistance, and the stolen goods were recovered.

The person who was robbed was a boy, just a little fellow about eight or nine, or maybe seven months old—it is very trying for an ordinary man to judge a baby's age. And this little person was playing on the front porch of his home at the time of the robbery. He was in a sort of corral about three feet high, with sides of spindles, and having just the best time possible with his toys.

And then the villain appeared. He was a villain with a fat little nose and a fat little stomach, and he crept stealthily up and peered inquisitively through the spindles at the very little boy, and the very little boy peered out at him with that air of world-old wisdom peculiar to the very little folk.

The fat little nose was thrust between two of the spindles, and the fat little stomach followed in due course, and then their owner, a little brindle pup, was within the corral. Possibly he was a little thief by nature, or possibly he was a victim of sudden temptation. But anyway he stole the toys of that very little boy, one by one and carried them over to the front porch of his home next door, where he was having the best time possible when he was discovered and the spoils of his expedition taken from him and returned to their rightful owner.

DOGS AS ARTILLERY HORSES

Proposition Under Consideration in France Seems to Have Much to Recommend It.

The French First army corps is said to be considering the adoption of dogs for hauling artillery. The dogs in question are the big Flemish animals, which are largely utilized in the north of France for dragging milk carts and other vehicles.

From the economic standpoint there is a good deal to be said in favor of the replacement of the horse by the dog so far as light artillery is concerned. A good Flemish dog can be bought for 100 francs, and the cost of feeding it does not exceed fifty centimes a day. The lowest price of an artillery horse is 400 francs, and the daily cost of its upkeep amounts to two francs. In other words, the first cost of the horse is at least four times as great, and it costs four times as much to feed. Moreover, for 100 francs it is possible to buy a dog in much better condition than the majority of the French artillery horses.

After the Forest Fire.

Wallace, Idaho, is still suffering from the disastrous forest fires of 1910, which burned over the watershed that furnishes the water supply of the city. This basin included an area of 2,000 acres and was formerly well timbered with trees from fifty to two hundred years old. These were destroyed by the fires of 1910. The city used to get its water supply not only for domestic purposes, but also for the development of electricity for power and light from that watershed. Before the fires the flow of the stream, at its lowest stages, was never below 1,000 miners' inches. Since the fire the records show that the minimum flow has fallen to about two hundred and fifty miners' inches. Each year they have to get power from steam and to use a considerable part of this power in pumping water. Records of the weather bureau at Wallace show that the precipitation for the years since the fire has been about normal for the region. This seems to demonstrate that the unevenness in the flow must be due to the destruction of the forest cover of the watershed and not to any change in climate or precipitation. The United States forest service has undertaken to reforest the denuded watershed.

How the Boy Scouts Help.

A story illustrating the helpfulness of Boy Scouts to those on the road is related by a correspondent.

"I had a puncture near Farmborough, Kent, a few days ago," he said, "and I was busily mending it when a troop of scouts came along and, to my surprise, the scoutmaster ordered them to halt.

"Can we help you, sir?" he said. "We have motoring experts in the troop."

"Two very small scouts—who had proficiency badges for 'motor repairing' and 'puncture mending'—stepped forward and saluted. I am sorry I did not need help."—London Mirror.

Great French Bacteriologist.

Dr. Eugene Doyen, who denies the claims set forth by radium experts that radium will cure cancer, is regarded as the greatest bacteriologist France has produced since Pasteur. He was born in 1859 and has devoted his life to the study of bacteriology. Among the discoveries to which he lays claim is that of the "cancer microbe." Despite occasional criticism by his brother physicians that his methods are unorthodox, his high position and brilliant record compel attention to his and his views.

FOUND WAY TO SEE PARIS

Englishman Quickly Got on to Scheme Which Enabled Him to "Do" the City Thoroughly.

There is a very good friend of mine, whom I now call the New Innocent Abroad, says a writer in the London Times. Though he has lived the greater portion of his life in the West end of London, circumstances have always conspired to prevent him crossing the channel.

He cannot speak a word of French, and last week he spent three days in Paris.

When he came back I went to see him.

"I think I have seen everything there is to be seen in the streets of Paris," he said when I met him, "because I discovered the ideal way of seeing a strange city.

"Whenever I wanted to go anywhere I signaled a taxicab and showed the driver the address I wanted. Now, all these French cab drivers are men with wonderful intuitions. They know at once that I really wanted to see Paris in all its beauty. So they took charge of me, and whenever I wanted to go from one office to another they drove me all round the city.

"Often after the first day I knew that the place I wanted to call at was not more than a few hundred yards away from the hotel. Still the cab drivers determined that I should improve my knowledge of Paris.

"The proper way to pursue this method of sightseeing is to drive for half an hour in silence. Then you stop the cab with violent signals, produce your written address again and flourish it in the driver's face.

"He smiles politely and generally treats you as though you are a naughty child. Meanwhile, a small crowd collects composed of polite individuals all anxious to proffer you their services.

"They direct you to different places of public interest, and after an exchange of courtesies you start on another joy ride for half an hour or so."

REAL CAUSE FOR ANXIETY

Old Gentleman's Exceedingly Neat Rejoinder to Tactless Remark Made by Nephew.

There is an old gentleman in Philadelphia approaching the ninety mark who still finds much zest in life, and, having retained all his faculties, he feels that a few of the physical disabilities of age are of small account. His nephew is a man of small tact, a fact which has always aroused the ire of the old man.

A few weeks before the old gentleman's eighty-ninth birthday this nephew, who had been overweighted with business cares for years, started on a trip to Europe that was to consume a year.

"I have come to say good-by," announced the nephew to the old man. "I am starting abroad to be gone a year—perhaps longer. I thought I might never—well, you understand—I wanted to be sure to see you once more."

Whereupon the old man leaned forward, fixing his nephew with his bead-like eyes.

"Bill," he said impressively, "do you mean to tell me the doctor doesn't think you'll live to get back?"

Now the Rain Bores Holes.

When rain falls it does not actually soak into the earth, but bores its way in, forming tiny tubes, says the Retoboth Sunday Herald. These tubes are so small that it would be impossible to insert a hair in one of them without bursting its walls. Sometimes the tubes are bored down to a depth of four or five feet. When the surface dries the water evaporates from the tubes, just as it would from a pipe. If the tube is twisted it takes longer for the water to evaporate.
