**GIVE US MORE CRUISERS.** With our extended coast line and shallow harbors it is a question if the recommendation of the Secretary of the Navy for an appropriation for three additional battleships is not premature. It is true that the draught of these ships is to be not more than twenty three feet, and that they could be used in the Gulf of Mexico, but we have no harbor between Port Royal and Galveston, which they could enter. Furthermore, there is greater need for more cruisers of the New York and Brooklyn type to protect our growing merchant marine and rapidly increasing foreign interests. Before building any more battleships we should also provide a suitable dry dock for their accommodation.

In the event of a war with one of the European powers, it is doubtful if our Navy would be called upon to protect our principal sea coast cities against its battleships, especially if our cruisers were sufficiently numerous to keep them at home. Our principal source of harbor defense would be found in harbor fortifications and torpedo warfare, and first-class armored cruisers are really more necessary at present than an increase of battleships. It must also be borne in mind that four such cruisers can be constructed and equipped at a less cost than is required to build three light draught battleships, and that they are capable of inflicting more damage to foreign interests than the ships recommended by the Secretary.—Washington Times.

**An Antiquarian Lunch.** Amariah Dukes, a New York broker, recently said: "I have eaten apples that ripened more than eight-hundred years ago, bread made from wheat grown before the children of Israel passed through the Red Sea, spread it with butter that was made when Elizabeth was Queen of England, and washed down the repast with wine that was old when Columbus was playing barefoot with the boys of Genoa. This remarkable spread was given by an antiquary named Gosbol, in the city of Brussels, in 1871. The apples were from an orchard jar taken from the ruins of Pompeii, the buried city to whose people we owe the knowledge of canning fruit. The wheat was taken from a chamber in one of the Pyramids; the butter from a stone shelf in an old well in Scotland, where for centuries it had lain in an earthen crock in icy water, and the wine was recovered from an old vault in the city of Corinth. There were six guests at the table and each had a mouthful of the bread and a teaspoonful of the wine, but was permitted to help himself liberally to the butter, there being several pounds of it. The apple jar held about two-thirds of a gallon and the fruit was sweet and the flavor as fine as though put up yesterday."—Our Home.

**Profitable Tobacco Raising.** The Savannah News says: Mr. Joseph R. Oliver, of Hillsboro township, in Marion county, South Carolina, planted this year six acres of tobacco. From the crop he had sold up to last week tobacco to the value of \$1,087, and still had a large quantity of his best tobacco on hand. How much he still has on hand is not stated by the Charleston News and Courier's correspondent, from whom the facts are obtained, but if he has a large quantity, and it is his best tobacco, it is fair to presume he will get several hundred dollars more from his crop of six acres. It may safely be assumed that he will get enough for the whole crop to make it bring him \$1,200, or \$2,000 per acre. That is more per acre than any cotton planter in Marion county has been able to get out of his farm in many years, if

For the people of Marion and Florence counties, South Carolina, have within the last few years gone extensively into tobacco culture, and the reports are that they have found it very profitable. Mr. Oliver's crop was probably above the average, but we have heard of a number of planters who have made from \$150 to \$175 per acre on tobacco, even when prices were lower than they are now. It is remarkable that Georgia farmers do not give more attention to tobacco. Floridians are very much interested in the weed this winter.

Hall's Family Pills are the best. **Americans as Fruit Eaters.** The American people will not eat bananas this year. The fruit importers have discovered this, to their surprise and disgust, and were very much worried at first over the cause. Why have the people given up bananas? they asked, anxiously. New Orleans supplies nearly all the West and South with bananas and other tropical fruit, and is the largest importer in this country. But bananas have sold so badly of late that the importers have cut down the number of vessels running to Central America one-half. They have only just discovered the trouble. The American people have not lost their taste for the tropical banana, but the latter has been knocked out by the big apple crop of the West. With apples at 75 cents a barrel the banana has no show, for the average man eats about the same amount of fruit each year, and prefers the cheaper. It is apples this year, to suit the hard times, but it may be bananas next season. So, at least, the importers hope.—Harper's Weekly.

**Gunton's Magazine.** A knowledge of economic and politico economic questions and their practical bearing upon American conditions is more important to American citizens today than is the scholarship implied in a college degree. The Republic hangs in the balance, and its permanence and prosperity will depend upon the education and good sense of the people upon these subjects, particularly the questions of Money, Protection and Labor. To this educational work GUNTON'S MAGAZINE is exclusively devoted. It reads not upon popular names, but upon carefully thought-out ideas, principles and facts. It aims to be strictly scientific in method, modern and accurate in data, and American in sentiment. It is in reality a magazine of American Economics and Political Science. 25 cents a number; \$2.00 a year. GUNTON'S MAGAZINE, Union Square, New York.

**Food Cranks.** A well-known teacher of athletics and the inventor of a machine for developing all the muscles of the body, a machine that should give the user perfect health and make him live forever or thereabout, has been the source of much trouble to his friends on account of his insane freaks as to his insides, particularly his stomach. He came to the conclusion that it was necessary to his well being to eat two or three quarts of ice cream and then use a stomach pump on himself and take it out. This is not a pleasant idea, nor was it a pleasant process. That, coupled with other queer manifestations, landed the athlete in a lunatic asylum.

He was not much crazier, however, than thousands of people outside of the insane hospitals who devote their lives to worrying over their stomachs. Here is a woman who devoutly believes she would die if she did not swallow a dose of warm water and soda after every meal. You cannot argue or reason or even pray with her on the subject. Another queer creature is in the habit of weighing every ounce of food he takes and carrying the matter as a heavy burden on his soul. If he should eat a sixteenth of an ounce too much, he would nearly expire from the pains of dyspepsia. You might try him in a mortar and you could not persuade him otherwise. Brethren, these be all cranks, every one. In their degree they are genuinely crazy. It is not their notions of food that make them crazy, it is their craziness that makes their crank notions about food. The true way is to eat the best food we know of and eat as little of it as will satisfy us, then think no more about it. There is nothing more disastrous than studying our internal anatomy too closely. There is nothing so destructive as brooding over our ailments and wrongs.

**The American Race.** The nineteenth century will close its eyes upon a people who form at least the groundwork of a distinct American race. Its best representatives are neither German, Irish, English, cavalier, Quaker nor Puritan in their ancestry. They are the result of the crossing, more or less scientific, of all these, with a dash of French and Spanish added. The man who is a mixture of Pennsylvania Quaker, Pennsylvania German, Scotch-Irish, New England Puritan and perhaps Knickerbocker Dutch is much superior to the man descended from ancestors who have staid in one place and reproduced, without change, the blood of the Puritan or Dutchman or of the English families, however noble, that originally settled in the south. The typical American will have the blood of the most civilized nations of Europe, peoples not too dissimilar, running in his veins. There will be fighting blood, scholarly blood, commercial, agricultural and artistic blood, and from the mingling and chemical combining of it all will spring the handsomest and most gifted race on the globe. We are not vain, but we really feel sure of this. Even Scandinavians, Poles, Hungarians and Italians will have their share in producing the perfect American race. We do not want too many of the last named peoples, however, and the government is wise to restrict their immigration.

By a mutual agreement the Republican representatives elect of Indiana may partially abandon the congressman's time honored prerogative of having postmasters of his recommendation appointed in his district. The postmaster will, if the plan is correctly reported, be elected by their fellow townsmen. The patrons of a given office, presumably women as well as men, will at a stated time vote for their choice for postmaster, and the congressman will recommend for appointment the individual getting the most votes. This is a wholly fair and just way of selecting a postmaster, and it is in accord with the spirit of American institutions to let the people select their own officers.

Like a sunbeam upon a stormcloud beams always a kindly, graceful action in this hard, grinding world. Such an act was that of King Oscar of Sweden and Norway, who erected a monument at Bergen to mark the spot where Mr. and Mrs. D. D. Youmans, American citizens, lost their lives last summer. The monument bears the names, home and date of death of the two travelers, with underneath the beautiful, touching words, "God's grace be with them." Below all the rest of the inscription stand the words, "Oscar II erected this memorial." The gracious act will endure King Oscar to all Americans.

Before the next presidential election it is to be hoped that somebody will invent a voting machine that will both register and count votes as rapidly as the little apparatus known as the cash register disposes of money put into its capacious slot. The recent election showed the great need of such machine. Perhaps the voting machines already invented will be fully perfected by the next election. Newfoundland is to be congratulated on the discovery of rich petroleum wells on her west coast. The home of the fog banks can stand an unlimited amount of prosperity at present. It is to be noted, too, that for once our own Standard Oil company does not appear to have got hold of the wells, but that a British syndicate is buying them.
