Failing Vision Inevitable.

Strange to say while all parts of the ody is growing, the eyes are going back, this begins at the 10th year, bu does not become manifest until middle life; at the age of ten the eye possesses near point of (3) three inches, at (20 twenty four inches, at (30) thirty, 5

inches, at (40) forty, 9 inches. At this period the near or close poin has receded beyond a comfortable dis tance, because of a flattening of the eye also s hardening of the lens and a weak ening of the muscle governing it, there fore as the power of making the lens more convex is removed and as the eye occomes flatter, you must see that tronrom some source.

Science and art has bestowed us with that aid in glasses which adds convexity to the eye and restores the near point to a comfortable distance
