Official Paper of New Bern and Craven County.

New Bern, N. C. Feby. 27. 1902.

ESCAPED REAL WINTER HARD-SHIPS.

It is a matior of congraculation that New Be a and bapeople have safely passed inrough a whiter, which while most serve - to I a coldness, yet has not cashed my great soffering, much less loss of life to the pool

The costs offset a very different story conce alig the winter and its hardships 'n r by tere' oas of Lie const v.

Snew has meeted business, shat off the poor frees obtaining work, and cos sequently worked haidships to the labothing less's.

Witnu a few days, following the noes, cours the story of rain. and freezing weather, which has wrecked teregraph and relachance wires, rained trees, and in luted property.

But in this section there has been no snow and ice to prevent work or injute piopec.v.

The weather has been sovere in its low temperatures, but fuel has not been excessively bigh, and the ground while frozen, has not impeded travel, or hindered the very poor from getting fire wood from the fields

Local benevolence has ever been or the watch to assist the needy, and yet this benevolent work has been so quietly done that help has been given without it appearing that any one was in need.

And especially has this city been fortunate in the health of its citizens, and from any disease.

The climate of New Bern is best appreclated, when it is compared with that of other sections.

#### \$100 Reward, \$100.

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages and that is Catarrh. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the bloc

aan Dungled His He vading Jury Duty. ense For Bunding Jarr Daty. A young man whose features and finahing eyes betokened great earnesh-ness was summoned before a judge of the city court the other day for jury duty. He immediately asked to be ex-cused. When the judge asked him what excuse he had for hot serving, he realied:

HE WAS EXCUSED.

"I believe it is a rule of the court "I believe it is a rule of the court that the jury is the sole judge of the facts and the court of the law—that the juror should only weigh the facts as presented by the evidence, not tak-ing into consideration any of the rules of law governing the case, wherefore all lawyers are exempt from jury dute."

"But are you a lawyer?" asked the judge.

"No, but I have been a close student of the law for many years." "I am afraid that I cannot excuse

you if you are not a lawyer," said the ourt, smiling. "But." continued the young man,

with great carnestness, the color mounting to his temples, "I am sure if your honor knew as much law as I do your conscience would not allow you to serve on a jury."

After the bench and bar had recov ered from this naive outburst the judge told the young man that if it was a matter which affected his conscience so deeply he would excuse him, and a very much abashed youth left the courtroom .- New York Times.

The Scorpion's Wonderful Ear. I have studied the habits of the scorpion for many years and have often noticed how very sensitive scorpions are to the most delicate sound, musical or otherwise. Under the thorax the scorpion has two comblike appendages, which are the antennæ (pectinate). It is pretty well settled by physiologists and entomologists that in insects the antennæ represent the organs of hearing. These delicate structures are easily affected by the vibrations of sound, and there can be no doubt whatever that they are also affected by sounds guite inaudible to the

human ear. The slightest vibration of the atmos phere from any cause whatever at once puts in motion the delicate structures which compose the antennæ, to which organs insects owe the power of protecting themselves against danger as well as the means of recognizing the approach of one another.-London Spectator.

#### Railways In Argentina.

"The rallway system of Argentina," says a correspondent of the London Post, "Is second to none in the world, Trains run at frequent intervals and punctually, especially the long distance trains. The rolling stock is excellent, and a long distance journey by rail is a luxury. The sleeping cars are sumptu ously appointed, the permanent ways are well laid, and there is consequently very little jolting. It is possible to breakfast or dine in the trains as comfortably as in a hotel. The dining cars are well fitted up and beautifully decorated with flowers and pot plants. The food is properly cooked and tastefully served at any hour of the day or night, and, above all, the charges are extraordinarily low. Fares, too, are very low, so that traveling is an easy and a

cheap matter."

Finger rings made of horseshoe nails! They are certainly not pretty or graceful, but they are said to bring good luck to the wearer on certain conditions.

To be a genuine charm the ring must be made from a nail taken from a horseshoe found by the owner herself unde a demand upon Ch'an for an addiand nobody else. This is taken to a jeweler, who bends it to fit her little tensi fad-mostry of 10,000.00 tenis for whice it is calme length. The ring is not welded together, and

### DIAMONDS. United States Days Three-Afths World's Output.

The world has never seen and in no other part of the world is there now to be seen anything like America's jewel madness as shown by the conditions of today, when more than 300 New York establishments are engaged solely in the importation of precious stones, when agents of American dealers are earching Europe for the white gen and hopelessly endeavoring to supply American appeals for rubles and emer alds and when 6,000 men in South Africa are tolling to obtain diamonds more than half of which are to add to

the beauty and happiness of the Amerlean women It is she that has caused the United States to become the greatest diamond market in the world. For her we have imported in a single year \$20.000.000 worth of precious stones, for her at one period we smuggled them in at the rate of \$7,000,000 a year, for her we annually buy something like \$12,000,-000 worth of diamonds and thus for her sake heartlessly leave of the world's total output of diamonds only some \$8,000,000 worth to satisfy the vanity of all the rest of the women or earth.

For her adornment we annually cause to be brought to this country diamonds weighing in the aggregate 1,200 pounds, a weight three times that of the total output of the famous Kimberley field and practically the equal of that of the whole of South Africa, the world's greatest dlamond mine.-Frank S. Arnott in Ainslee's Magazine

A Way of Cooking Rodents. The negro slaves of Jamaica used to regard rats as a dainty, their masters not providing them with any other meat. Their method of cooking the toothsome rodents was to impale each one on a long wooden skewer after cleaning the animal and cutting off the tail, turning it briskly around over a fire until the hair was all burned off. Then it was scraped until free from fur, and finally the end of the skewer was stuck into the ground, inclined toward the fire, until it was toasted dry and crisp, thus being made ready for the meal.

Saved Her Child's Life.

"In three weeks our chubby little boy was changed by Preumonia almost to : skeleton," writes Mrs. W. Watkins, of Pleasant City, O, "A terrible cough set in, that, in spite of a good doctor's treat ment for several weeks, grew worse every day. We then used I'r. King's New Discovery for Consumption, and our darling was soon sound and well. Wo are sure this grands medicine saved his life."
