## MATTER OF BUSINESS POLICY.

The question for the people of New Bern to decide, is not so much whether their city possesses every natural advantage, hence outside men and outside cap-Ital must come here, but it is whether we have business sense and wit enough to are the trade to which the position of New Bern, in its location, is justly en-

No! merchant, no community, can stand idly by itself, and draw trade.

It is not the question of baving a superior stock of merchandise, or baving an attractive geographical location, which brings a merchant plenty of customers, or brings in those who will build up a

There must be a well defined, intelligent, and determined policy in either case to bring success.

And the success is not won through doing nothing, but in reaching after everything of profit, and that in a most energetic manner.

The Pamlico, Oriental and Western ratiroad company ask that the people of New Bern vote an issue of \$50,000 worth of bonds, to secure that road's being extended to this city.

New Bern has been named as the first choice of places outside of Pamlico coun ty, where the proposed railroad wants to make connection with points North

The country to be opened by this railroad, embraces not only the rich Pamlico section, but also that of part of Beaufort county, and Hyde county with St. Paul ...... 1774 its great corn crops will pays its tribute Erie ...... 89\$ by sending its grain over this railroad to Atchison pf ..... 99; find a market in New Bern.

Here is an opportunity for New Bern to secure a profitable monopoly of a O. & O. ..... 53 splendid annual business]

As a matter of business policy, it is for New Bern to secure it, permanently, by accepting the conditions upon the trade, as proferred.

The real question, to be decided is, have we sense enough to secure the monopoly of this trade, or lacking the sense let it go elsewhere?

# Deafness Cannot be Cured

local applications as they cannot the diseased portion of the ear. re is only one way to cure deafness, mid that is by constitutional remedies.

Deafness is caused by an inflamed conlition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, Deafness is the result, and under the properties of the result, and under the result, and under the result of the result. inflammation can be taken out nd this tube restored to its normal conn, hearing will be destroyed forever; cases out of ten are caused by sh, which is nothing but an ined condition of the mucous ser-

"Oh, don't," the author said. "He

This was a contingency that M Blackwood could not bear to consider He promised that some member of his family would tring the manuscript, and next day, in fact, Mr. Blackwood drove over with it.

How Lightning Kills.

The cause of death by lightning is the sudden absorption of the electric current. When a thundercloud which is highly charged with positive elec tricity hangs over any certain place the earth beneath it becomes abnor mally charged with the negative ele tric current, and a man, animal or other object standing or lying directly benenth also partakes of the last mentioned influence. If while the man animal or other object is in this condition, a discharge takes place from the cloud above, the restoration of the equilibrium will be sudden and violent, or, in language that we can all under stand, the negative current from th earth will rush up to join the positive cloud current, and in passing through the object which separates the two currents, if it be an animate thing will do so with such force as to almost invariably produce instant death. According to the above, which seem

tenable hypothesis, to say the least, a person is really "struck" ground current and not by the forked fury from above at all.

Intelligence of the Ant. An interesting demonstration of the intelligence of the ant was made by a student in the biological department of the University of Pennsylvana. The roung man construct d a roadway two feet in length of metal and divided to into two parallel paths, separated by a high partition. One of the paths be painted red and the other blue, and at their end, in plain view, he put a mor el of rich cake, says the Philadelphia Record. Then he set an ant at the be ginning of the roadway. The ant at mee made for the cake over the red ath, whereupon the student turned or lamp under his mechanism and heat ed the path to an uncomfortable degree. The ant kept on and finally secured the cake, but on its return it must have told itself that it had had a mighty uncomfortable journey. Several ours later the student brought it out again, another morsel of cake being set at the end of the roadway. The ant thought a moment and then started for the cake over the blue path. It re-membered that the red one had been hot. To prove still more conclusively that it remembered, the student next blocked up the blue path, whereupon the ant did without the cake rather than venture after it by the red one.

SECRET OF DIGESTION.

The Relation of Brain Action to the Food We Est.

Some experiments on a dog concerning the effects of personal liking for yarious foods on the digestion were recently made by a well known scientist. The results are curious and interesting.

It was found that the articles of diet which the animal was particularly fond of met with a great flow of the gastric juices and were accordingly digested better and more quickly. For purposes of observation the gullet of dogwas cut in sections and fixed o the neck sp that the food it ate fell through The stomach of the animal was also divided into two portions. into one of which no food was allowed to ester, the other being supplied only with the food necessary to life.

If some tempting dainty was held before the dog and he evinced the usual signe of pleasure in the expected treat at was noticed that at once the stomach, juices sprang into play, although the food when swallowed did not reach the stomach at all. On the other hand, if he was fed with something which he evidently did not have any preference for there was no action of the gastric fluid.

Also, more curious still, when food was introduced unknown to the anl mel into the working half of his stom ach it lay there absolutely dry and contouched by the digastive laices for several hours, even though the food were of the most digestible sort.

All of which proved conclusively that mere thought or favorable brain action of any sort concerning the food caten not only assisted the digestion, but partly caused it. Professor Pawlow, who made the experiments, thinks this partly at least explains why men of letters are often dyspeptic. Their minds are busy with things far removed from their dinners when they are cating. The connection between the narve which sends the important message down to the digestive machinery below for more oil and the patient engineer of nutrition is cut off. So when unexpected orders for deglutition come piling in upon them they are not ready and the work is bungled.—New York Herald.

An Artificial Aurora At the Royal society rooms recently Professor Ramsay showed an experimental proof of the electrical nature of the northern lights. Between the poles of a powerful electro magnet be suspended an exhausted glass globe containing at the top a metallic ring An alternating current discharged through the ring in the globe produced an annular glow, and when a current was sent through the colls of the electro magnet the glow was deflected those of the aurora borealls. The spectrum of the natural aurora shows the presence of krypton, and in Professor Ramsay's experiment krypton was produced in the discharge through the rarefled air within the globe
