There is much complaint heard shout the water furnished by the City Water Works. At one time everybody was beasting about how palatable and good the water was, but it is anything but pal atable now, in fact it is sometimes nauseating. One or two days this week it has looked more like milk than water and had quite a peculiar taste. An inspection should be made to see what's the matter. It will put the city in pretty bad shape to let the water furnished by it polson its citizens Bo much for quality. In quantity the supply is not sufficient for the needs of the people, and the ordinary pressure is hardly worth speaking about. The service of the water and light plant could be great ly improved. What's the matter? Are the officials to blame, or is it because the help don't do their duty?
