>~********************* There's Room For Success \$

Great Southwest \$ The

Have you ever considered the great advantage of this feature of the Southwest-pleuvy of elbow room-where three, five, even ten acres may be had at the price of a single acre in your home section? It's worth considering, especia !; when the great productive worth of the land is taken in account. It's a wonderfully fertile section. There is no betagricultural section in this country, and farms are cheap out there-in Arkansas, Oklahoma and Texas-simply be-Cause there are more farms than farmers. Can you afford to overlook an opportunity of this kind? Our illustrated booklets will give you the particulars in detail. It not interested yourselt write for them anyway in behalf of your less favored relatives and neighbors. (Mention this Paper.)

A LOGICAL SAVAGE.

In an Argument. med to know in Australia an were talking one day about the matters of New Guinea, and he told m liow one of these natives had stumpe him in a certain argument. It seem that he had accosted the unive an urged him to let himself be civilized. "But what good, the native sated, will this civilization of yours do me?" "'Well," said the missionary, 'you will cease, for one thing, to idle all

your time away. You will learn the delights of houest labor. "'What good will the labor do me?' "Through it you will gradually accumulate money, and in time, with frugality, you will possess much store of honestly acquired riches." "The native was still unconvinced 'What good will the riches do me?' was

his next question. "They, said the missionary, will enable you to cease from work at last and to spend the rest of your days in well earned rest." "The native laughed.

" 'It seems to me," he said, 'that if I did as you say I would be taking a mighty roundabout course to get to the place I started from."

INDIA RUBBER.

Its Form of Structure Which Permits

It to Be Elastic. Modern physics teach us that the molecules of all bodies are in a state of incessant motion; that the intimate dropping off the shoulder, to which structure of matter is, in fact, a repro-

is put on in the same manner.

duction on an infinitely minute scale o the revolving suns and planets. In gases and liquids this motion i most extensive in range, but in solids the movements of the molecules are more restrained, and they merely oscillate or rotate about a certain mean position, the range of motion being strictly governed by the attractions

producing it, If by the pull of an outside force the molecules are drawn out beyond the limit of their mutual attractions the body is broken, but within this limit is will recover itself when the pull ceases We may regard the particles of rub ber as revolving in circles. When it is stretched these orbits become elliptic returning to the circular form when released. As then this substance pos sesses a very wide range of variation of molecular distance without rupture it is eminently elastic.

DOCTOR OF DANCING.

This Title Was Given to Beauchamp by Louis XIV.

In France during the reign of Louis XIV, dancing took a very prominent position among court festivities, and many members of the royal family took part in the complex ballets of the time. Louis himself, no mean perform er, took lessons for twenty years from Beauchamps, who was called the fa ther of all dancing masters and upon whom the king conferred the title doc tor as a special mark of favor.

Beauchamps had the honor of ap pearing as partner with the king in the minuet, a dance which was introduced in 1650 in France, and no court ball was opened in Europe for a century and a half without it.

About the year 1661 emy of dancing was formed under the auspices of Beauchamps, Lulli, Mollere this style has been out of vogue, but | and others, the object of which was to elevate the art and check all abuses. Of this academy Beauchamps was chief, with the title of director.-Lonport enough to supply such a demand. | don Telegraph.

> A Story of a Scholar. Theodor Mommsen, the famous his torian, had not only the appearance but the manner of a scholar. Once during the half hour's drive from Ber lin to Charlottenburg the car in which the professor rode went badly off the track. The rest of the passengers alighted, the horses were removed and the stranded car was left until bely could be found. Mommisen remained reading his book. Ap hour passed, and the sound of levers and jacks and the plunging of horses' boofs aroused him from his reverie. With no sign of discomposure he arose from his seat and went to the door. "Ah," said he, "we

seem to have come to a standstill." Maine Counties. The three original counties of Main had good old English county names, York, Camberland and Lincoln. Only two, Oxford and Somerset, have been similarly named since, all the rest baying good American appellations. For the names of Androscoggin, Aroustook, Kennebec, Penobscot, Piscataquis and Sagadabor find their origin among the pearl buttons. The cape has four small | aborigines, while Franklin, Hancock, Knox and Washington bear the name

of distinguished Americans of the white race A Pent In Growth. "I lost my foot in the war," said the tramp, "and I'm teying to raise enough money to get out to California "What do you want to go to California for?" asked the woman at the door.
"Oh, I've heard that there are things

which grow a foot in a day out there. -- Yorkers Statesman. The Dessivers.

Miss Verjuce What a shame it is now the men deceive us poor women Miss Bluchous They would never get a woman to marry them onless they did, my dear. New Yorker.

The Abacus In Japan. The Japanese shopkeepers use the abacus, or soroban, so universally that the stranger quickly comes to a realizing sense of the absence of all mental calculation in the empire. In lieu of paper and pencil any child or adult will at once take up the soroban when given a problem in mathematics and rattle its beads about as though he were amusing himself. The principle of the little instrument is this: Each of the five beads in the broad lower division of the board represents one unit, and each solitary bead in the parrow upper division represents five units. Each vertical column is thus worth ten units. Each vertical column represents units ten times greater than those in the column immediately to the right of it, exactly as in our own system of notation by means of the Arabic numerals. Any sum in arithmetic can be done on the soroban, even to the extraction of square and 'cubic

roots. Handy With Texts. James Whitcomb Riley told a story of an old fellow who asked for work at the Riley farm in the poet's boyhood. He was set at hoeing potatoes, but did not prove to be especially industrious. When taken to task for his lack of application he only replied, "Waal, the good book says, 'Do all things in moderation." "Well, it came on dinner time at last," says the humorist, "and the old codger did his share nobly. In fact, he ate enough to kill two or three ordinary men. Some one gently hinted that the text didn't seem to apply. He opened a worn little Bible and imperturbably pointed to a passage. It read, Whatsoever thy hand findeth to do, do it with all thy might."

Bow and Arrow Drill In China. In 1896, a year after the war with Japan, so disastrous for China, a high Chinese official, who had never seen a shot fired, penned a memorial to the throne to prove that China's defeats were due solely to her having exchanged the methods of warfare taught by the sages for newfangled European Ideas and European weapons. The memorial was published with commendation from the throne, and I myself saw Chinese recruits practicing outside the walls of Peking with bows and arrows.-Valentine Chirol in Na tional Review

The Dead Sea.

There are no fishes in the Dead sea no life of any kind. The ne of solids in the water is enormousabout 26 per cent. The principal solid ingredients are the chlorides of sodium, magnesium and calcium. The deepest part of the Dead sea's bed lies 2,600 feet below the level of the Mediterranean. Its depth there is 1,310 feet Oddly enough, it has a cloud system of its own, for one may frequently see cloud banks lying over the Dead sea which are 600 or 700 feet below the level of the ocean.

He Was a Stayer.
