FOR FARM AND GARDEN,

WHITEWASHING.

While whitewash on the walls of the heu houses inside gives light and renders the lause cheerful, it is cheap enough to use on the outside as well. To those who do not care to use paint we will state that if they will use whitewash on the outside they will be surprised at the neat appearance it will impart to the hen house and fences. It may be washed off some by the rains, but that should be no obstacle to its use, as it is easily and quickly applied .- (New York Herald.

SIZE OF A ROOTHOUSE.

As a bushel of notatoes occupies a space of a cubic foot and a half, 450 cubic feet of space are required for 300 bushels. A b'n should be three feet deep and not over five feet wide, so that thirty feet of length of bins will be nee led. A house sixteen feet square would thus be required for this quantity of potatoes. The temperature of a roothouse should be as near freezing as possible and not over forty-five degrees. To keep this low temperature, which is raised somewhat by heat generated in the mass of the polasses, occasional ventilation in dry, c -d weather will be necessary .--New York Times

MARNELLE BELLINNE STOCK. Unless you desire to flaten concles,

advantages in the increased productiveness of the farms. I cannot

imagine a farm so poor that, by stocking it to its capacity and applying the manure to the surface as fast as made, it cannot be rapidly increased in productiveness. I have seen very thin land, with apparently no grass on it, treated through the winter with manure from the stables, that by the next autumn was so heavily coated with white clover as to draw the attention of the passens-by .- [New York Tribune

THE BREED OF SVINE NEEDED.

How we should pity the poor pig; he is the most misused animal on the farm. He is supposed to live ou most anything or nothing if pressed to do it, and get fat on the castern blizzards. The manure pile is a good enough bed for him and it makes no difference if he is confined to a pen-which is nevercleaned; or if his feed is put into a trough half tilled with filth.

He is left, when young, to run after his poor mother, still more abused, through wind, storm and sunshine alike, to pick his living where he can find it, or where he is supposed to tind it.

He is the scavenger of the farm that is never cared for. Yes, and he is not only supposed to endure all this, but if he is among the cattle and gets a cow's horn half way through him, or is taking his chances among a score. of his larger kin who hall him to the fence, breaking a rib or two and dislocating a joint, he must not get filebrand. When he gets into the front yard and his owner breaks a hourd over his back or sets a deg out him which takes off his left cur, he must be contented.

Under all these curcaustances this little, ironefall savings bank is sup- with its westera line by a certain date. posed to by up ports for all that he

After he has endlated all these outside terrors he is not yet through. He is put into a pen. Oh! how fine: mere is a whole painful of cora. He cats greatily, but soon how sick he gets. He wishes that he could get out and root up all ties feares on the farm. if necessary. He wishes that he ould get some more reofs, clover and milkto east but no, he was born a pig and | water. The management of the road must quietly endure his storr scoutch. his achiev level and his dirty uest till. he is turned into pura, and his hapless? life is brought to an end.

Now, what we want is a bog that under all the electromistances will keep good health and maintain a steady growth. If this breed can be found with the power to transmit fit to offspring , the owner has a fortune in store for him. About two-thirds of our farmers need such a breed; where

Cabinet Fatalities.

Deaths of Cabinet officers during their time of office have been rare. The suddenness of Secretary Windom's decease calls up the tragic deaths of Abel P. Upshur, Secretary of State, and Thomas W. Gilmer, Secretary of the Navy, under Tyler, on February 28, 1844. The two gentlemen, as well as a number of other distinguished persons, were killed by the bursting of one of the guns of the shipof-war Princeton, then on her trial trip. The Journal of the House shows that on February 29, 1844, President Tyler sent a message to Congress, in which he said :

I have the melancholy duty to perform of announcing to the two Houses of Congress the death of the Hon. Abel P. Upshur, late Secretary of State, and the Hon. Thomas W. Gilmer, late Secretary of the Navy. This most lamentable occurrence transpired on the United States ship-of-war, the Frinceton yesterday at about 4.30 o'clock in the even ing, and proceeded from the explosion of one of the large guns of that ship. The loss which the Government and the country have sustained by this deplorable event is height ened by the death, at the same time and by the same cause, of several distinguished per sons and valuable citizens.

I shall be permitted to express my great grief at an occurrence which has thus so sud denly stricken from my side two gentlemen upon whose advice I so confidently relied in the discharge of my arduous task of admin istering the office of the Executive Department and whose services at this interesting period were of such vast importance.

Mr. Webster died while filling the office of Secretary of State, Mr. Rawlins while Secretary of War, Mr. Brown and Mr. Howe while Postmuster-General and Mr. Folger while Secretary of the Treasury, Mr. Windom was therefore the second Secretary of the Treasury who died in office, and like Mr. Folger, he died while away from the National Capital, Secretary Manning was stricken with a fatal disease while Secretary of the Treasury, and died soon after leaving the service. As was also the case with Mr. Folger, Searctary Wordem died from heart failure, generally sturil and to overwork in the perioduction of his official duries. - New York Workl.

Chance Location of a thir.

According to a Seattle (Washington) man, it was a case of necessity when the city of Taroana was located on Puget Sound, "The Northern Pacific," he says, "was obliged to reach tude water The financial flurry came on, and it was difficult to raise funds necessary for the completion of the read. Yet large land grants and heavy subsidies were dependent upon reaching of salt water by a certain date. It was the intention to place the western terialnus of the Northon Pacific far to the north and west of the present location, but in spite of the untiring efforts of finameters in the East and engineers in the West it was seen that the point selected could never be mached in time to save the lands and funds dependent upon reaching salt ordered the engineers to press toward the n substantial on the sound without reit to the terminus,"- Ikston Tran-- 143 C
