HOW TO TREAT THE GRIP.

A Celebrated Paris Physician's Ideas. The New York Herald publishes an WM. P. LAWRENCE.

interview with Albert Robin, the celebrated Paris physician, giving his ideas as to the best treatment of the grip. He is reported as saying:

"A curious thing is noted, and that is that in large cities it is less intense than in the smaller towns and villages. It attacks all temperaments, but old and feeble persons are the most severe sufferers. Children support the malady better than adults. If influenza is ea pecially dangerous on account of the complications that arise from it, it follows that its true treatment is to avoid the latter. These complications are pneumonia, pulmonary congestion, weakness of the nervous system, aciduweakness of the nervous system, acidu-lous poit oning of the blood. To avoid such complications the patient should be kept rigorously in bed so long as there is the slightest cough. Warm aromatic portions should be given, which induce perspiration, and by sweating eliminate the toxic products that encumber the blood.

" I have determined, by the way that the sweat of a person suffering from influenza is twelve times more tonic than that of a person in a normal condi-tion. Weak does of sulphate of quinine of from twenty-five to fifty centigrams should be given three times a day. The reason is that large doses make the patient sleep profoundly and destroy the fever, but have no action whatever apon the poisons circulating in the blood ty. Small doses, on the contrary given frequently, render more active exudation and elimination of the poisons which are the principal means of elimi which are the principal means of elimi-nating animal poisons, and consequent-ly it is more harmful than useful. To sulphate of quinine should be added alcohol in moderate doses in the form

of port wine or grog.

'It is necessary above all when fever has disappeared and the patient wishes to go out and resume his usual
