When the writer cansoppositione of the fore-ts here, so great! large number and variety of evergreen structurely implequate. It is improved, and the predominance of the phase gave the impression of a lack of developes wood. But a little observa--lowed that they were not wanteg, In the space of PSO, I and opportu-ing for the first time to take a trip to we bestern part of the State, and make strictly he a central Mount Mitchell. In going from the context on the eastern shore to propagated through so many generation in a loy of the Swamanoa in Buncombe country, we also by a more or less regular country to represent them as "furriners, case to an elevation of nearly 2500 test. The reader may discriminate at his pleas the distance by ordinary route of travel ure. rather over 100 miles but "as the grow. I have drawn on all available source ther over 100 miles but "as the crow fire something less than 300. In this for information, and been helped greatly range of clevation, the appearance of the forest — as well as the soil and climate— has obanged greatly. The pines are no longer the prevalent—growth—but are small and few in number, and the banks of the Swanannoa are lined—with hard—the swanal and swanannoa are lined—with hard—the species of the fast Carolina As—the fore Fises of the fast Carolina As—the fast Carolina As—t

waithts and make and maple—richness and beauty in endless variety and form.

"This is the forest primeval."

The mountain side is steep and rugged, so that a borse can carry up his rider only by swaying to right and left in a lerent give and survey only by swaying to right and left in a lerent give and give an endless of this level give and give an endless of this level give and give an endless of this level give and give an endless of the level give an endless of the level give and give an endless of the level give an endless of the level give and give an endless of the level give and give an endless of the level give an endless of the level give an endless of the level give and give an endless of the leve broad zig zag course. Two hours of this tedious climbing bring us to a place long known as the "half way House" and in reaching it we have passed through and out of the magnificent growth mentioned, have seen the different kinds.

Nearly all of these have been forward-warieties of wood duning in size and growth mentioned, have seen the different varieties of wood dominish in size, and one by one drop out of sight, till here there is only a low shrubbery, principally of oaks. From this point the changed character of the woody growth covering the mountain is very noticeable, belief with different names. In all about and prices, call upon B. B. NEAL, covering the mountain is very noticeable, and marks a dividing line clear and well defined. Below are the heavy tembers and hard woods mentioned, with an undergrowth of laurel and ivy, and herbs and flowers in great variety; above an almost exclusive growth of Balsam Fir, everywhere present, beautiful, fragrant useful, sometimes growing in large areas of nearly uniform size, and again of all sizes together from the tall tree of six

test girth, down to a thicket breast high, and the plants of a lenal breadth. These constitute the only undergrowth except Berne, Craven county, N. C., Mar. 25th, an occasional clump of the green and 1893. glossy rhododendron, and the beautiful soft moss of bright yellow green color which in many places covers the ground as with a carpet and extends over rocks and the trunks of fallen trees, softening

the sharpness of their outline, and cloth-ing them as with a rich mantle. I have mentioned the ubiquitous balsam as being almost the exclusive growth near the cummit of Mount Mitchell. It cems to the ordinary, or even careful observer to be wholly so, but many years ago—1787 and 1802—two distinguished naturalists, the elder and younger Michaux, observed in the Black Moun Mr. Splase.
