**Would you trade a Penny for a Dollar?**

You can if you use Natural Chilean Nitrate of Soda for your top-dressing and side-dressing needs. It costs a little more because it's worth more. But the difference in cost usually can be measured in pennies per acre, while the difference in value often amounts to dollars per acre.

Chilean "Bulldog" Soda gives you generous extra value. The nitrogen is 100 per cent nitrate. It's 100 per cent available (quick-acting); 100 per cent dependable. The minor elements make crops stronger, healthier. The sodium—25 pounds in every 100-pound sack—is a key to maximum returns on your entire fertilizer investment. It offsets the bad effects of acid-forming fertilizers...increases the efficiency of mixed fertilizers containing them. It releases "locked-up" potash in the soil...increases the availability and efficiency of soil phosphate...reduces potash, calcium and magnesium losses by leaching...develops larger, deeper root systems.

Sodium builds up the productivity of your land—more each year. It's an essential element for some crops...beneficial to most and necessary for maximum yields of many.

Pennies-per-acre difference in cost may mean dollars-per-acre difference in value to you. Chilean "Bulldog" Soda is the best fertilizer your money can buy. Use it for all of your top-dressing and side-dressing needs.
