**CAROLINAS SANDHILL
PEACH SHOW AT HAMLET
THURS., FRI., JULY 23, 24**

Hamlet, July 13—Antoiats from every section of the Carolinas and beyond have learned to adjust their plans so that they can head toward Hamlet for the mid-summer exhibits as put on by the Carolinas Sandhill Peach Show.

This year the Peach Show is going to far surpass anything previously offered the public in this section.

On July 23rd the show will be formally opened by Governor Angus W. McLean, and a program of pleasure and profit will follow each hour of the day. On July 24th, Governor Thomas G. McLeod, of South Carolina, will be the guest of honor and deliver the main address. On each of these days there will be an exhibit evening and night of the American Legion Circus, a six act, high class attraction; acrobatic events, baseball games and plenty of orchestra and brass band music.

As on former occasions of this nature, the Kiwanis Club will serve a banquet for the visiting Kiwanians and honor guests, so that none may fear a lack of accommodations.

The peach exhibit itself will be the most attractive it has ever been, by reason of the ideal weather conditions for developing perfect fruit—a most cordial welcome is extended the entire public to visit Hamlet on July 23rd and 24th, and help to enjoy the attractions of this annual event.

**LAST CALL FOR
FORAGE PLANTING**

In a news release just issued the United States Department of Agriculture calls attention to the impending hay shortage throughout the country due to drought in the big hay producing regions. In connection with this announcement the Department takes occasion to point out the fact that timothy hay is bringing from \$25.50 in Atlanta to \$27 in Memphis, and that alfalfa is bringing \$30 in Atlanta and \$25 in Memphis. And mind you, this is right in the middle of the haying season, a fact that can hardly be taken to forecast anything other than high prices throughout the next twelve months. Moreover, the wheat crop of the country is many million bushels smaller than that of 1924. It has been predicted that the total production will scarcely exceed consumer demands within our country, affording no exports. If there is no wheat for export we may reasonably expect high prices to obtain for this product also. With wheat high corn will be relatively high, too. And all taken together, there is just one conclusion. That conclusion is that if the South does not prepare to take care of itself somebody is going to wake up mighty sick.

Fortunately our planting season is not yet ended. A mixture of fifty pounds of Mammoth Yellow soy beans planted in rows, or peas broadcast, or sorghum broadcast, or sorghum and peas mixed and broadcast at the rate of one bushel of peas and one-half bushel of sorghum to the acre, are all crops that can be planted with a fair degree of assurance of success even on up to August. Of course, we should not expect the yields from these late plantings that might have been produced from earlier plantings. If we make no more than a ton to the acre, however, such yields will prove tremendously profitable under existing circumstances. Even under ordinary conditions plantings of these crops should be made. The South has never yet produced an over abundance of roughage.—Southern Ruralist.

Seventy-eight per cent of all the farms in Kansas have telephones.

**CALIFORNIA TO GIVE
OTHER STATES DATA**

Will Supply National Committee
With Facts About Its Thirty
Thousand Electrified Farms.

Definite activity is in progress in California, the one state where actual farm electrification is further advanced than in any other, to collect data which will be of benefit to other states interested in this subject.

The national committee on the Relation of Electricity to Agriculture will be the clearing house for the information secured. The arrangement resulted from visits to California by Dr. E. A. White, director of the committee. He informed a gathering of California agricultural and electrical men of the national committee's purpose and assisted in the organization of a California state committee.

In California, thirty thousand farms use electricity. Their consumption of energy in a typical year amounted to 554,000,000 horsepower hours.

Eighty per cent of this energy was employed to operate irrigation pumps. Nearly half of all the electrical energy expended on California farms is derived from electric motors.

At the same time, much use is made of electricity on California farms for typical farming operations. There are also many California farm homes which are completely electrified.

Several sub-committees are gathering general information on the California farms which use electricity. One committee will gather data on costs and kinds of uses of electricity. Another will investigate the question of rates for farms.

The third committee will find out how electricity is used in California farm houses and how it makes life more livable on the farm. The fourth committee will study the economic utilization of electricity on the farm.

Poultry farms and dairy farms will be given special study, as will the farm shop. Refrigeration and the spraying of plants will also be looked into by one of the committees.

It is to be expected that the investigations under way in thirteen other states will find much to add them in the information obtained from California.

**GOV. A. W. McLEAN MADE
HIT WITH COTTON ASS'N**

Charlotte, July 14.—Governor A. W. McLean and his executive budget system and program of economy made a distinct and decided hit with the textile men of the State during the convention of the Cotton Manufacturers' Association of North Carolina, according to men of Charlotte and this sector who have just returned from Asheville where the meeting was held. Governor McLean evinced quite a degree of interest in the well being of the textile industry and his straight-forward discussion of a business government for the State struck a responsive chord.

Hurrah! No More Lice!

"Now I can set in peace. Even the poultry house, barn and stable are free from lice since we used

DR. LEGEAR'S LICE POWDER"

Makes hens feel better and lay better when dusted into the open feathers of the fowl and around coops, roosts and other places where lice and vermin are likely to be found. Easily applied from sifter top can. Also good for repelling lice on horses, cattle and dogs.
Satisfaction Guaranteed or Money Back

The stock of horse and mule colts in this country is at a low ebb and progressive farmers in North Carolina will find in this an opportunity to make money, thinks Prof. H. S. Curtis of State College.

Why Suffer?

THE SOUTHERN SERVES THE SOUTH

Millions for necessities but none to spare for luxuries

Railroad profits are limited by law, and rates are fixed by the Government. In no other large business is so great an amount of capital risked for so small a return as in railroad transportation.

The new money put into a railroad, therefore, must be profitably employed, either in increasing capacity for service or in effecting economies of operation.

The Southern, never yet able to control all the new capital its management would be pleased to invest, necessarily has to give preference to productive improvements, such as yards, shops, engines, cars and tracks.

But it is because it has devoted its resources to necessities—rather than non-productive improvements like monumental passenger stations—that the Southern has been able to keep its service abreast of the demands of the territory it serves.

*The net income earned by the Southern Railway Company on its property investment has averaged only 3.72% per annum during the last ten years.
