published an interview with David Riesman, Harvard professor and noted author on social trends. On being asked if he thought the fad for the Beatles is a mania, answered "It's a form of protest against the adult world. These youngsters arehoping to believe in something, or respond to something new that they have found for themselves." He further points out that no fad lasts too long as it starts out as a min ority movement. "It is selffulfilling, self-nourishing for the minority that supports it, and every member of the minority is supposed to respond in the same way. As soon as the majority takes it up, it can no longer be a fad."

Of interest to me was the fact that Reisman said being British had nothing to do with the craze. It is more difficult to cultivate fads within America. Mass media promotes anything so quickly in America that we have to use other English-speaking lands in order to have a place for fads to grow. comments Reisman.

Further questioned "how about the Detroit movement to stamp out Beatles". "Oh, we have a campaign of our own to stamp out Detroit," said McCartney (one of the four).
