and from 8 until 11 a. m. on Saturday for eleven weeks be-ginning February 29. This cou-rse is the first of two courses in Data Processing, Machines covered will be: 514 punch reproducers, interpreters, sort-ers, 3 series of busic colators and basic 1401 computer. Cost of the course will be \$3 per

tems, at the Institute, each Tuesday and Thursday night for six weeks, beginning April 9. Cost \$5.00.

I like the dreams of the future better than the history

### Social

#### Security

Mny workers who are of re-tirement age are still working full time at regular em-ployment. It is believed that a great number of these workers have not applied for their so-cial security benefits because they are still working. If you are one of these workers, you should contact your Social Security of-fice at your earliest confice at your earliest con-venience, it may be possible for you to work and still receive benefits for some months of the year. This will depend on the amount of your bene-fits and the amount of yearly

There are several reasons why a person of retirement age should contact his Social Security Office even though he is a

still working.
(1) A man or woman may, in some cases, continue to work full time and still be entirled to some benefits for the year.
(2) A person can establish entitlement to benefits while he

There is often a delay in payment when people do not have the necessary proofs and other required information available when they file their applica-tion. If an application is filed in advance of actual retirement, This would eliminate the last minute rush to secure the needed information which might de-

action toward preparing a per-son for retirement until he has filed an application.

If you are of retirement age and have not filed an appli-cation, you should contact your Social Security Office immediately. The office is located at 311 East Walnut Street in Goldsboro. The employees there are always at your service to help you with your social security problesm.

# PAGE 3 THE DUPLIN TIMES-PROGRESS SENTINEL, FEBRUARY 20, 1984

when a disease severaly threatens the very breath of life, its cause, treatment, pre-valence and prevention become of great concern. Such is the nature of certain respiratory

Because of this concern, the scientists of the North Carolina Sanatorium at McCain, N. C., are at work on a project which when completed should provide answers to some un-answered questions regarding certain respiratory diseases and their relationship to tu-berculosis. These diseases constitute a major health threat.

These investigations, according to Dr. W.H. Gentry, Associate Superintendent-----Medical Director of the Sanitorium, are designed to study for a period of 12 months the incidence and severity of chron-

ic respiratory diseases in a group of adult patients who live primarily in rural ares. These patients will be seen in the 15 local health Departments, Chest Clinics and in the Sanatorium Out-Patients Department by sanatorium physicians. Most

I have just read a report on the apparent effect of seaweed

on the growth and flowering of iris. I found the results report-

ed to be of sufficient interest

to me to pass on to my read-

Seaweed is commonly referred to as kelp and includes a large number of the brown

siderable interest in seaweed

as a food and as a nutrient to

supplement the fertilizer pro-

gram. It has been used on both

flowers, vegetables and fruits. Mrs. Jeannie Price of Black-

burg Va. used the seaweed for-mulation on her iris at the re-

quest of a Norwegian company

who manfactures the product.

Incidentally Mrs. Price is an accredited exhibition judge and a member of the American Iris

Socity. This fact lends credence

to her report.
Mrs. Price used 29 varieties

and four treatments -- no sea-

weed, granulated seaweed, extract seaweed, and the extract

plus the granulated form. In all cases the use of seaweed formulations made a difference in

the general plant vigor, flower production, quality of the bloom, length of blooming season, and cold resistance.

The differences that Mrs. Price found in her treatments can be ascribed to the large

number of trace of micro-

weed. Leaf analyses were run for copper, manganese, molyb-denium and zinc. In all cases the leaf content in parts per million was higher than you

would expect from using a regular complete fertilizer such as an 8 (N)- 8 (K). The pH (relative acidity or sweetness) of the soil was raised from 5.5 to a maximum of 7.2. This puts the pH in the neutral zone

or slightly on the sweet side.

The leaf analyses show the accumulative power of the plants grown in seaweed without detriment to the plant or the soil. The findings do not give

all the nutrient needs of the iris

plant but they do give an in-dication of the response of this plant to what we might call a balanced fertilizer treatment. Mrs. Price concludes: "My

own experience (after one year) using Norwegian (Ascophyllum nodosum) seaweed verifies that

the trace (micro) elements de-

rived from this product are em-

inently successful with iris.'

Dark Chocolate Sauce

(Makes 1 cup)

¼ teaspoon salt
3 tablespoons butter
½ teaspoon vanilla
Heat chocolate, water, sugar

and salt in saucepan on low heat. When chocolate is melted, raise heat slightly and cook until thickened, stirring constantly. Add butter and vanilla; mix thoroughly. Serve het or cold on pudding or ice

Helen's favorite:

1/2 cup sugar

2 squares unsweetened chocolate % cup water.

There has been con-

studies previously reported here have been done on people living primarily in cities or large metropolitan areas.

Many of the patients are seen as referrals from private physicians; others are former T.B. patients returning to the clinics for regular cheek-ups.

The patients get routine tests to determine breathing capacity chest X-rays, tuberculin skin tests and physical examinations. They also provide information for a standard questionnaire,

Those with evidence of sig-nificant pulmonary disease are advised to have a more detailed diagnostic werk-up ei-ther by a private physician, or private diagnostic clinic, or in the Sanatorium, This diag-nostic and treatment information will become a part of the overall study.

Emphysema, chronic bronchitis, asthma, silicosis and bronchiectasis are among the diseases found in addition those having tuberculosis, Each leaves its crippling imprint on the tissues of the lungs and each takes its toll in human suffering and misery. Approximately 1,000 tests have been made since July, 1963, The completed study is expected to include more than 2,000 pa-

counties are represented. Patients in the emphysema group are largely white males 90% of whom have a history

tients. These tests are char-

ted by the counties from which

the patients come. So far 33

of smoking.

Treatment for this group presents a challenging problem.

At the present time intermittent positive pressure breathing machines are used in the treatment of many patients. Some of them are able to carry on a fairly normal life at home by using small, mexpension, handoperated treatment ma-

"The patients have to be taught to live with their disease, since there are no medicines that produce a permanent cure in most of them," said Dr. Gentry. Dr. Gentry further noted that

patients with severe shortness of breath have a tendency to

1964 Heart-of-the-Year Award to Rickover

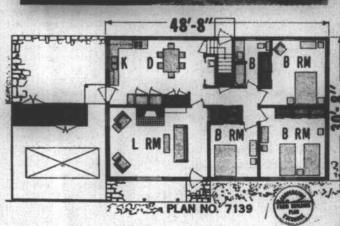

VICE ADMIRAL H. G. RICK OVER, who survived a heart attack in 1961 and continued as "father of nuclear propulsion," has been named recipient of the American Heart Association's Heart-of-the-Year Award. It is given yearly to a "distinguished American whose courage and achievement in meeting the personal challenge of heart disease have inspired people everywhere with new hope." President Lyn-don B. Johnson was the 1959 recipient. He was then Senate Majority Leader.

reduce their physical activity. some even becoming complete ly bedridden. This decreases further the efficiency of the complicated respiratory process frequently resulting in apprehension and fear of suffocation.

The study, helped financia-lly by Tuberculosis Associations through Christmas Seal Funds, is still too much in its infancy to now produce the answers which are being sought But, already it is showing that there is a need for recognizing the e chronic respiratory diseas s in the early stages when treatment can be more

### 3-Bedroom Farmhouse

If you've been wanting a home with plenty of room, this 3bedroom farmhouse may be just

what you're looking for.

Designed by the U.S. Department of Agriculture, the house is of masonry, slab on grade construction, and features --plenty of storage space, a den or office for farm and household record keeping, two baths three bedrooms, laundry center, utility room, living room with fireplace, and family and dining area.
The laundry center is loca-

ted next to the sleeping area, convenient to the source of most soiled clothing and linen. Three nearby closets offer convenient

storage.

The family and dining area offers facilities for formal and countertop meals, It is arranged so the homemaker can easily supervise all activities while engaged in her usual household tasks. A desk for meal planning, a toy storage cabinate, and a sewing center are near the front window.

You can order free working drawings of the Plan No. 7141 from your county agricultural

Peanut butter and cheese combine to make a rich soup, brimful of flavor, to warm the heart and nourish the spirit these chilly days. Here's a soup with the double protein of cheese and peanut butter to serve as a main dish for lunch or supper. It's easy to prepare, yet has the subtle flavor of a long-labored-over dish.

PEANUT CHEESE SOUP (Makes about 2-% cups)

1 can (11 ounces) condensed Cheddar cheese soup
4 cup milk
5 cup water

1 can (11 ounces) condensed Peanut Butter
2 tablespoons finely chopped onion, optional

Mix together all ingredients; heat to serving temperature, stirring occasionally. May also be served as a sauce for hot sandwiches, fish and vegetables. Garnish with parsley, if

is still working, and his claim can be completely processed before he retires. This can be done even though his earnings, at present, prevent him from receiving benefits. This elimin-ates delay in receiving benefits at the time he finally does re-tire

a person will have ample time to secure the necessary proofs for completion of his claim. lay your benefit check.
