

Has Your Car Been Inspected?

RALEIGH - Motor Vehicles Commissioner A. Pilsner Godwin, Jr. has ordered a stepped-up enforcement of the Motor Vehicles Safety Equipment Program.

"I have been informed by the State Highway Patrol that a recent on-the-road survey throughout the State indicated 98.8% compliance with the 1965 law. We now think it time to push for full compliance as drivers have been given ample opportunity to comply with the law."

Vehicles carrying license plates ending in digits 3 through 8 should have been inspected.

and those carrying 7 as their last digit must be inspected by July 31. All vehicles must be inspected by December 31. Commissioner Godwin set Monday, July 11 for the effective date of the accelerated enforcement program. Meanwhile, instructions have gone out to the entire highway patrol. Actually the patrol already has made some arrests for violations of the law and many warnings have been issued. Now owners of vehicles which have not been inspected within the periods specified will be subject to arrest.

Owners of vehicles rejected due to faulty equipment do not in every instance have 90 days in which to have vehicle re-inspected. The inspection deadline is not extended. Operation without current inspection certificate or defective equipment subject the operator to arrest action.

Homestead strains and others. A more serious disease, bacterial wilt, also attacks tomatoes, but we have no varieties resistant to this trouble, which is soil born. The symptoms are also different from fusarium. Plants are stunted and wilt rapidly, usually beginning in the top portion of the plant. The plants die, usually without yellowing or spotting of the leaves. The inside of the stem shows a brownish discoloration and is water soaked near the ground line.

The apple trouble was caused by cedar rust. This is an alternate host fungus disease which spends the summer stage on the apple leaves and the

Museum Award Winners Art Displayed Chinquapin

James Sprunt Institute and the Tar Heel Fine Arts Society are sponsoring an art display at the Chinquapin Elementary School from Thursday, July 14 through Tuesday July 19 an exhibition, AWARD WINNERS, which consists of paintings and sculptures from the collection of the North Carolina Museum of Art and circulated by them in cooperation with the state Department of Community Colleges.

sun? Yes. What is the soil type? Clayey. Have you given the plants reasonably good care? Yes. What variety did you plant? When he answered "Big Boy." I was sure of the diagnosis because this variety is not resistant to fusarium wilt.

Fusarium wilt stunts the plant growth; leaves turn yellow, wilt, wither and drop off, starting at the base of the plant. Brown streaks occur inside the lower stem and roots, and a brown canker may girdle the stem near the soil line.

The most practical method for control of this disease by the home gardener is the planting of fusarium wilt resistant varieties. There are many good ones - Marlon, Manalucie,

GARDEN TIME

BY: M. E. GARDNER
North Carolina State University

Two local distress calls were received this week—one about tomatoes and the other about apples.

When the person calling about tomatoes described the symptoms, I was pretty sure that the trouble was caused by fusarium wilt—a fungus disease. I did ask some questions, though, to confirm my suspicion. Are they growing in full

On the upper surface of the leaf the disease appears as yellow-orange to orange-red spots with black specks. On the under side of the leaf the spots appear as creamy white to light orange, short fuzzy tendrils. Leaves that are heavily spotted will drop prematurely, which stops fruit sizing and growth processes, generally.

The most practical control for the home fruit garden is to remove the cedar trees, thus destroying one of the host plants. The other method is to pick off and destroy all cedar balls as soon as they form on the cedar trees.

HEALTH AND SAFETY TIPS FROM THE AMERICAN MEDICAL ASSOCIATION (sunburn)

One dermatologist (skin specialist) has predicted that sun-tanning some day will no longer be a "status symbol" and that people will quit baking their outer hides to a golden brown each summer.

The dermatologists have long known of the hazards of sun-tanning, such as premature aging of the skin and various freckles and blemishes.

But your doctor also knows that, whatever the future brings, some Americans today still are suntanners, and thus the American Medical Association suggests that if you must tan, do it without burning.

Gradual tanning with a minimum of discomfort is possible for most people. Gradual exposure to the sun is the safest and simplest method of acquiring an attractive tan. As a general rule, begin with 15 minutes exposure the first day, and increase the time by a few minutes a day. The time of day is important, with the mid-day period, when the sun is directly overhead, being the hottest for burning purposes.

Continued tanning brings gradual changes in the blood vessels of the exposed surfaces. The connective tissue of the skin degenerates, causing wrinkles and a coarsening of texture. The "v" of the neck becomes permanently reddened and freckle-like dark spots appear on the skin. These spots can sometimes be the start of skin cancer.

Sun bleaches the hair, too, and over a period of time the sunbleached hair becomes brittle and unmanageable. However, the damaged hair will eventually grow out.

The physical benefits of tanning are almost nil. The only beneficial effect of sunlight, other than the psychological lift of sporting a good tan, is the formation of vitamin D, and the American diet already provides an ample supply.

FINAL SUMMER Sale

SUMMER MERCHANDISE REDUCED FROM 1/4 TO 1/2

variety of china patterns, flatware and stemware, if you wish. Give each tray a distinctive color scheme with a brilliant place mat and a tiny bouquet arranged in a small dish.

"A little ingenuity will take you through the common crisis of too few serving dishes. When the menu is an ample one, this can happen in even the best-equipped households. Try turning ceramic canisters into serving dishes. If you have an extra insulated ice container, press it into use. It will keep hot foods as well as cold. Your electric appliances such as skill lets, saucepans, griddles, and warming trays can go from the kitchen to the serving table with the extra advantage of keeping foods piping hot if the meal is delayed."

"Guests will be less apt to leave hot serving utensils in the casserole (to burn another's fingers) if you provide a butter plate or small dish beside each hot dish. If you are an antique collector and have an old crystal dumbbell, by all means put it into service as a spoon rest."

If your trays are arranged individually rather than stacked, put the glasses right on each tray. If you are having buffet style service but your guests are going to be seated at a dining table for the meal, place the glasses and silverware right on the dining table. Another solution is to put glasses on a side table or tea cart adjacent to the buffet."

If someone is available to pour coffee at or near the buffet table, then place the coffee

Reddy Comments

By Priscilla Singletary
Carolina Power and Light Company

Here are some tips on how to be a buffet buff from the current issue of Better Homes and Gardens.

A successful buffet always looks delightfully easy to the guests - but, as every hostess knows, it can present special hurdles. Instead of stacking trays on the table, make use of a break front or a china cabinet to hold the complete set of trays. Trays can be set in different ways, featuring a

Lake, Sea & River

ON GUARD!

The scene: Your town on a warm June morning. You hop in the car with your family and head for the marina where you keep your boat. Upon arrival, the kids tumble out and race for the dock, only to come racing back again.

"Where's the boat, Dad?" they yell as they screech to a stop.

"Whaddya mean, where's the boat?"

"It's gone!"

Sure enough. There where your rig is usually bobbing at her dock lines is nothing but an empty slip. You've been robbed!

It could happen, even though you probably don't like to consider the possibility. Each year we have more and more boats on the water and each year, more and more boats are stolen. Some are never recovered.

Outboard motors are particularly juicy targets for our contemporary pirates. More often than not, unfortunately, these stolen motors never come home. An outboard motor is too easy to keep out of sight...and is pretty easy to steal, too.

If you don't or can't generally take your motor off the transom when you leave your boat at the dock for a day or so, you'd be wise in fitting one of the better outboard motor locks to the transom clamp. This lock will serve to keep the clamps from vibrating loose

Be sure to have the serial number of your motor recorded so that if the motor is stolen you can report the number to the authorities. You should also send a report of the theft to the company that made the motor. Many outboard manufacturers send periodic lists of serial numbers of stolen motors to their dealers. If a motor of that make and size comes in for repair, the dealer can check the list of numbers to see if that motor is a stolen one.

Your boat poses a different problem. There often is no serial or hull number you can use for identification. All the pirate need do is repaint the boat, replace some of the fittings, and you'd never recognize it as yours. If the hull does have a number, it's generally easy for the pirate to shave it off or destroy it some way. So it may be smart to put your own identifying mark on the hull somewhere.

I remember as a kid taking my bicycle and drilling holes in the bottom of one of the frame members. The holes were in a particular sequence that would positively identify that bike as mine no matter how well the other kid had painted it over. You might try the same stunt with your boat. Drill a series of holes under the gunwale, or on the bottom of the dash. They will look like they belong there but yours will be the only hull of that make and model with those holes. Report this fact to the authorities when you report the boat stolen.

Your rig may not be stolen. Let's hope not, but if you take a few precautionary steps now, you run a better chance of getting it back should someone "borrow" your rig on a permanent basis.
