gers and buyers of poultry and

KEN ANSVILLE -- Teaching poultry and livestock technology just comes naturally at James Sprunt Institute located in Duplin County, which leads North Carolina in income from agricultural products. The county of ty also places 80th in the na-

The poultry and livestock program is designed to teach the student about producing, marketing, processing and distributing livestock and poultry according to the scientific principles essential to efficient and profitable operations.

and profitable operations.

Thomas Hall, dean of in-struction at James Sprunt, said that, according to a 1966 census, the county was fourth in broiler production, fourth in egg production, fifth in hatching eggs and first in turkey pro-duction. The total income from the poultry industry was second in the state, in swine produc-tion fourth, in vegetable pro-duction (excluding potatoes) se-cond, in corn production fifth and in tobacco production se-

Hall further pointed out that the poultry and livestock technology program is perfectly suited for the area, explained that in 1967 it was estimated that Duplin County produced 36 million broilers and two and a half million turkeys, a four and a half million dollar in-crease over 1966. He added that it is estimated that the turkey production will double by 1970.

Summing up the situation, Hall said, "An atmosphere di-versified in agricultural pro-ducts prevails in the county."

James Sprunt's dean of in-struction explained that Duplin County needs programs to train individuals to fill the void in fields related to agriculture. will leave and find employment elsewhere."

To add to the attractiveness of the program, while at the same time making it more informative, the poultry and livestock students are escorted on field trips where they come face to face with situations they have learned about on class. Included in their itinerary are trips to hog and cattle farms, egg operations and a diagnos-tic lab for poultry. According to Hall, a farm

background can be an asset for students studying poultry and livestock even though their knowledge might be on a lay-man's level. However, he add-ed that in some cases a farm

commended which should give good control of the mexican bean beetle. These materials are carbaryl (Sevin), malathion and parathion. Parathion is an extremely toxic insecticide and should be applied with great care. The suggested rates of active ingredient per acre: carbaryl, 1 pound; malthion, 11/2 pounds and parathion 1/2 pound, These insecticides are effective for only a few days. Beetles which migrate into the field several days after an in-secticide has been applied, are not likely to be killed by the insecticides. Due to the high population of the adult beetles early in the season this year, repeated applications of insecticides may be required to give satisfactory control of the mexican bean beetle.

there will be a picnic lunch. Special singing will begin at 1:30 p.m. (The regular pastor the Rev. Ray Harrison, Kin-

ston will deliver the message.) Everyone come and bring a picnic lunch.

Hospitalized

Continued From Front Page Sheriff T. Elwood Revelle said James Thomas Williams,

colored male age 18 of Rt. 1, Seven Springs, was shot in the elbow at Addie Pearl Melvin's place, by what was determined "a small pistol", probably a 22 caliber.

many.

Williams was carried to a Goldsboro hospital Saturday night where he was treated and released. Sunday afternoon after reporting the shooting to the sheriff, he went to Duplin General Hospital where X-ray showed the bullet was still in the arm, located between the two bones. Dr. Redwine sent him to Memorial Hospital in Chapel Hill.

The assailant has not been identified and no charges have been preferred today.
