Members are urged to sign up in pro shop. Players will be assigned according to the CGA Handicap System.

Davis Lee, R.D. Johnson, and Jim Thompson have been appointed to serve as co-chairmen of the Tournament Committee at Duplin according to President Mike Kern.

Ramblewood's Durwood Anderson led the number two par three 148 yard hole last week playing with John Walington, Royce Swinson, and Aubrey Turner.

George Wellons reports a "superball" golf tourney at Ramblewood, Sunday September 9th. Entry fee will be four dollars and all members are invited to play.

Ramblewood Club Manager George Wellons urges members to make plans to play in the

Robert West Wins Duplin's First Annual President's Cup. Above Duplin Country Club President Mike Kern presents "president's cup" to Robert West winner in the First Annual President's Cup Golf Tournament held at Duplin last weekend. Pro R. C. Kinlaw, on right, made the presentation to

runner-up Joe Costin. Cousin Robert won the two day handicap event with a 94-70-136. A.M. Benton and "ole I.B. were tied for second place with I.B. winning on third hole matching score cards. West gave his famous "chipper" credit for winning. Congratulations.

President Mike Kern reported First Annual President's Cup a success with 25 players. Kern's stated, "we are planning an exciting year at Duplin for the entire family and hope that members will take a more active part in all club functions." Kern also said, "activity as of late has been real good, the course is in good condition, and additional work has been planned to make it a neat and maintained as well as any course around."

Rockfish Pro Gene Briggs announced that club championship has entered quarter-finals with exciting round to be played including the Billy Harrell vs Dandy Dan Fussell match, the C.T. Fussell vs Ben Harrell match, and Billy Potter vs Harold Wilson match. Other rounds in the Championship flight that should be exciting are Bobby Smith-B.B. Longest, Billy Apple-Linwood Denton, and the matches of Jimmy Longest vs Tommy Eater in the first flight.

Pro Gene Briggs urges all area golfers to start making plans to play in the prestigious Poultry Golf Classic, October 6-7.

Duplin Pro R.C. Kinlaw urges golfers to make plans to enter the "scotch foursome" golf tourney set for next Sunday, September 1st. Prizes will be awarded to nearest pin, longest drive, line in fairway, and several others to players. Ladies are urged to sign up in the Pro Shop and play in this club function. Entry fee of two dollars per person to enter, with all monies going back to winners in merchandizes. Plan

to play. Duplin President Mike Kern urges all golfers to post scores in pro shop. "We are in the process of establishing handicaps for our golfers through the CGA Handicap System" Kern said. "We would like for everyone in our club to participate in all the tournaments, but to do so we must set up a handicap system fair to all, and this we are now doing." Kern declared, "your cooperation will be greatly appreciated."

Duplin's Handicap Chairman Dan Holton urges all planning to enter the various golf events at the club "must" post scores to set their handicap or have a handicap of near par set by committee.

Duplin has planned a "member-member" golf tournament for Saturday and Sunday, September 8-9. All members urged to play.

Rockfish Pro Gene Briggs reports Ladies Club Championship will get underway next week.

Pro R.C. Kinlaw reports the annual "Quinn-Ann" will be staged at Duplin Friday, October 12th.

Duplin's club championship will be held Saturday and Sunday, October 13-14. All mem-

Match Play Tournament scheduled at the club Saturday and Sunday, September 22-23. Two day dollars entry fee includes meals, supper for players and wives. Any non-player may attend the supper for five dollars.

For Republicans To Meet There will be a meeting of the Wake/Swain Precinct Republican Party (Duplin County) at 8:00 p.m. August 22, 1975, at Stroud Station, Rt. 2 Mount Olive. The purpose of the meeting will be to elect Precinct Officers and delegates to the County Convention.

VD FOUND IN REST ROOMS
Contrary to years of belief, a few days ago, Dr. Alan Henning, says it's quite possible that gonorrhea can be transmitted in ways other than by sexual contact. The idea that the disease can't be caught in public rest rooms has been crushed.
Dr. Henning found that strains of gonococcus when spread on disinfected rest room surfaces were still alive four hours later. He isolated gonococci from the toilet seat, wash basin, water tap, an electric light switch, a dump bucket, and even on flagstones that had been in contact with those surfaces.
This means that anyone who has been in a rest room has to watch those dirty "men's rooms".

America's Energy Crisis. Mr. Wizard Tells What You Can Do About It Right In Your Own Home.

The energy crisis is debated on such a grand scale in this country, you probably feel there is very little you can do. But this just isn't so. There are a lot of ways you can reduce the amount of electricity you consume without sacrificing either comfort or convenience. And, since the cost of electricity has gone up, you'll feel better knowing your electric bill is as low as possible.

If you're planning to build a house, or re-roof the one you have, be sure to select the lightest-colored roofing materials available. Your shades, blinds or drapery linings should also be light in color.

Naturally, you'll be a lot more comfortable. And you'll be cutting down on one of the biggest single wastes of America's energy resources.

one match represents one BTU. Now imagine the heat from 60,000 matches.

When You Waste Electricity, You're Really Wasting Fuel.

Here in the Carolinas, most electricity supplied by CP&L is produced in generating plants that use coal. So anytime you waste electricity, you waste coal. For example, when you leave a 100-watt light bulb burning for 12 hours, it costs you about 2½¢. But it also costs a pound of coal. That's right, one pound of coal is consumed to supply the energy for one 100-watt light bulb left burning for 12 hours. And lights use relatively little electric power.

If You Buy An Air Conditioner, Be Sure You Buy The Right One.

During hot weather, air conditioning accounts for about 40 percent of the electricity used in the home. So it's important to use it wisely.

That's how much heat your range, dishwasher, clothes dryer and other appliances can give off in a day's time. 60,000 matches worth! That's a lot of heat. And it puts a tremendous strain on your air conditioner. So if you'll use these appliances during the early morning or late evening when it's cooler, your air conditioner won't have to work so hard, you'll save money on your electric bill, and you'll be a lot more comfortable.

If you're planning to buy a new air conditioner, look for the most efficient model for your particular situation. A unit that is too large or too small for the area you want to cool can waste electricity. So figure out the amount of space your air conditioner will have to keep cool, and give these figures to your appliance dealer. Or, call CP&L and ask one of the residential representatives to help you determine just how large or small a unit is right for the job.

And remember, the harder you work your air conditioner, the higher the risk of costly repair bills. So keep your filters clean and avoid using the coldest thermostat settings.

Whether or not you have air conditioning, a lot of heat can build up in your attic if it's not properly ventilated. This heat radiates down from the attic and virtually smothers the cooler air in your home's living area. An attic ventilator fan, thermostatically controlled, is the answer.

This fan will draw the hot air out, make you a lot more comfortable, and take some of the strain off your air conditioning. (The attic ventilator fan should not be confused with a

For every degree below 75 that you set your thermostat, you add about seven percent to your cooling costs.

You may find that 75 degrees, or higher, is a comfortable, money-saving compromise.

Insulation Can Save Up To 40% On Your Heating And Cooling Costs.

Nobody knows just how much of the energy consumed in the United States is wasted. But we do know one thing, a great deal of the waste is due to inadequate insulation.

If your house isn't properly insulated, chances are up to 40 percent of your heating and cooling costs are going right through the walls, ceilings and floors.

In one of my TV demonstrations, I show how insulation protects my hand from the heat of a blowtorch.

Now, if insulation does that, imagine how well it will protect your home from hot air in the summer and cold air in the winter. It's easy to insulate a house when it is under construction. So if you're planning to build, don't skimp on the insulation. If you do, you'll pay for it the rest of your life. If you're not sure that your present house is adequately insulated, you should have it checked. (Most insulation companies will check it for you at no cost.)

Take it from me, every penny you invest in proper insulation will be returned to you in lower heating and cooling bills. In some areas, it will pay for itself in just three to five years. And after that, you'll pocket the savings.

ceiling exhaust unit which draws the air out of the living areas of your home and pushes it into your attic.)

Other Appliances Can Make An Air Conditioner Old Before Its Time.

Heat is measured in BTU's, or British Thermal Units. The heat from

CP&L Must Build New Generating Plants To Meet Growing Demand.

Here in the Carolinas, CP&L customers use about a third more electricity than the average family nationally. And the overall demand is doubling every seven years.

Also, in the years ahead, massive quantities of electricity will be needed to help clean up the environment. Sewage treatment plants, recycling machinery, air scrubbers for industrial smoke stacks—all of these run on electric power.

So you can see, CP&L will have to continue building new generating plants to meet this area's future demands. But if everybody makes an effort to cut down, it will help ease the drain on our natural resources and save you money at the same time.

Carolina Power & Light has written a book about more ways to save. Pick up your free copy at your local CP&L office.

The Color Of Your Roof And Drapes Can Save Money.

As I've demonstrated on television, light colors reflect the sun's heat, while dark colors absorb it.

A dark-colored surface can get as much as 60 degrees hotter than the air temperature. That same surface, if painted white, would get only about 20 degrees hotter than the air temperature.
