Introducing Reward.™
It leaves sicklepod defenseless.

Reward reduces the waxy "armor" on sicklepod leaves so later postemergence sprays can attack more effectively.
Reward knocks back early sicklepod and forces later-emerging sicklepod to grow up in the shade of your soybeans' canopy.
You can hardly find a tougher-to-control weed in your soybeans than sicklepod (or cogweeder). But sicklepod has two defense mechanisms that new Reward helps you crack.
First, sicklepod has a tough waxy coating that is almost impossible to penetrate by most postemergence herbicides. Reward, applied preplant, reduces these foliar waxes. So your postemergence sprays can stick and adsorb better and knock out sicklepod more effectively.
Second, sicklepod grows fast in full sun but grows poorly in the shade. Reward knocks back first flush sicklepod to give your beans a head start. Later emerging sicklepod never has a chance, because by that time your soybeans have started to canopy.
If sicklepod is one of your biggest problems in soybeans, knock it defenseless with new Reward. See your dealer for all the details now. Stauffer Chemical Company, Agricultural Chemical Division, Westport, CT 06881.
The first step in sicklepod control. Stauffer
