TAR HEEL STATE

NEWS OF MORTH CAROLINA TOLD IN SHORT PARA-GRAPHS FOR BUSY PEOPLE

******* Raeford.-Two blacks one of whom is a negro preacher, two whites and is an negro preacher two whites and two Croatans, and three liquor stills, constitute the showing by the officers of Hoke county during the past week.

Salisbury.—Rev. Ingram, of Stony Point, was instantly killed at China Grove while working on a steel structure for the Southern Power Company. He dame in contact with a high power voltage wire and death resulted.

Rocky Mount.-James Craig Braswell, Jr., son of Mr. and Mrs. J. C. Braswell, of this city,, was drowned at Marblehead, Mass., according to advices received by his parents.

Durham .- Durham County Commissioners signed an agreement to cooperate with the State and Federal departments of agriculture and testing all the cattle in the county for tuberculosis. The work will start the first of August. Durham is the twentysixth county to join in the movement. Hamlet .- One of the most important financial transactions in the history of

Hamlet occurred whtn the Page Trust Company took over the First National Bank. The First National Bank had assets, according to their last statement, of \$275,000 with deposits of over two hundred thousand.

Henderson.-Final agreement was reached by the city council at its meet-ing upon the various paving projects to be undertaken under the third bond issue for \$200,000 to be expended in street improvements. A total of twelve street projects will be given hard surface pavement.

Hickory.-City council retained C. Gadsden Sayre, of Anderson S. C., and Raleigh; as architect for the proposed high school building and cut the amount of the bond issue from \$300,000 to \$250,000. Mr. Sayre told the board that \$225,000 would erect and furnish the building, leaving \$25,-000 to be spent on improvements on the other buildings.

New Bern.-Excitement that bord ered on panic broke out in Mt. Calvin negro church here when, during the funeral service of the wife of Miles Spruill, pastor of the church, a section of the floor in the rear of the audityrium broke through and 2,000 shricking mourners plunged through doors and windows seeking safety.

Charlotte.-Lord Lochiel, chief of the Glen Cameron, and his wife, Lady Hermiane, who were to arrive in this country October 15 from Scotland, will visit Red Springs and Flora Mac-Donald College, it was announced well known among the ancients, here. Plans ar under way for a great gathering at Red Springs of North lways extremely fond | Carolinians of Scottish descent to welcome the couple.

> Hickory.-Chief of Police Pink Cambell, of West Hickory, is in a critical to assist in controlling the apple magcondition at a local hospital as a refitted for the pur- sult of knife stabs inflicted, it is, asanother to the serted by officers, by Claude Pollard. young white giant, as Cambell and Policeman Ben Danner were attempting to arrest him in West Hickory. One of the wounds is between the heart and the liver.

Henderson.-A public library to cost not more than \$30,000, and a lot in the heart of the city on which to build it , is offered the city of Henderson by Col. and Mrs. Henry Perry, parents, and Mrs. H. L. Perry, w 3, w. of the late Henry Leslie Perry as a permanent memorial to the prominent young local attorney who died a few weeks ago after an illness of severat

Sanford.-Dr. W. C. Wicker, Elon College educational field worker of the Masonic order of this state, addressed a good sized audience of the craft and a number of visitors in the auditorium of the West Sanford school building on the subject of "The Brotherhood of Man and the Sisterhood of Woman."

Winston-Salem .- Richmond Brown suffered serious sinal injury; D. W. McCaskill internal injury, and Clayton McMichael two fractured ribs when a car in which they were riding near Kernersville left the road, plunged into a ditch and turned

Henderson.-Bennie Jarrell, 17, was killed by lightning at his father's home in Warren county, ten miles east of here. Two of the lad's brothers were sitting on the porch with him at the time and were seriously shocked and burned.

Reidsville.—Clyde Hodges, a youth of Draper, was the victim of a horrifying accident, when his left arm was literally torn rom fthe body at the shoulder by a pulley belt, and hurled a distance of fifty feet.

Charlotte.-Mr. and Mrs. W. D. Brown, whose bodies were found in the burned ruins of their home at Hilton Head, S. C., were the parents of Mrs. D. M. Holmes, 811 North Tryon

Henderson.-North Carolina's new law requiring all vehicles to stop at railroad crossings after July 1 is not being generally observed in this section, if reports being received here are accurate. No arrests have been made for violations of the statute so far as has been learned, certainly there have been no trials in local courts for that offense.

Horticultural Hints

Blackberry Plants Need

Cultivation in Summer Blackberry plants should be kept cultivated during the entire summer and where they are kept cultivated

the sprouts will be kept down in the

middle of the row. If you have not already begun to top the young shoots or canes of the blackberry plants you should do so when they reach a height of two and a half or three feet. This can be done readily by going through the patch and pinching out the tops while the sprouts are young and tender. It will be necessary to go through the patch several times during the summer in order to pinch

reached the proper height. This pinching back will cause the plants to branch and be stocky, better able to resist the winds, and will increase the fruiting wood for another

the plants back when they have

The canes which bear the fruit any one season die at the close of the har-The time to remove these old canes depends on the location or exposure of the planting. Ordinarily the recommendations are to remove the old canes at the end of harvest, but practice has demonstrated that in exposed windy localities the old canes protect the young tender shoots from injury by the wind. In cases other than this, remove the old canes at the close of harvest.-By D. C. Mooring, Extension Horticulturist, Oklahoma A. and M. College.

Spray for Cherry Slugs With Arsenate of Lead

The eggs from which the slugs that infest the cherry and plum leaves hatch are deposited by a black fourwinged fly about as large as a common house fly. The eggs are laid one in a place and are then thrust just beneath the epidermis of the leaf, making a pimple about the size of a small

The slugs are easily destroyed by spraying with arsenate of lead, or white hellebore, as soon as they begin to appear. If there are cherries I would not advise using the arsenate of lead late in the season, on account of the danger of poisoning those who eat the fruit. The white hellebore, lightly eat the cherries.

The slugs may also be killed by spraying with Black-Leaf 40, a good teaspoonful to a gallon of water, or a pint in 100 gallons.-C. P. Gillette, Colorado State Entomologist.

Fourth Spray Helps in Controlling Apple Pest

R. S. Mackintosh, specialist in hortfculture for the agricultural extension dision of Minnesota university, sends out notice that the fourth spray got should be applied about July 20.

As the adult flies do not all appear at the same time, it is necessary to keep the foliage covered with poison. Ordinarily it is advisable, says Mr. Mackintosh, to leave a few trees unsprayed in order to check up results. but with the apple magget it is safer to spray all the trees. If there is sufficient arserme of lead present, the insects are killed.

Minnesota orchardists are showing a preference for the standard liquid lime sulphur, says Mr. Mackintosh. "One of our orchardists used the liquid last season while his neighbors used the dry," he says, 'but they lost so much from the scab that this year they are using the liquid. It has been found necessary in Michigan orchards to use five or six pounds of the dry per 50 gallons of water to equal the liquid."

Proper Thinning Tends to Improve Apple Crop

Proper thinning reduces the number, but the remaining fruit becomes so much larger in size that the yield is practically as much. Besides this the fruit is nearly all marketable at a good price.

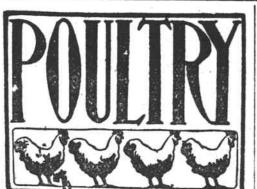

Thin apples when about one inch in diameter, removing all apples at the ends of branches. Where two or more apples are attached to the same fruit spur, only the best one should be left. If the spurs are too close together, remove all the apples from some of them, so that the fruit is five, six and sometimes eight inches apart. Always remove the smallest and most inferior fruit.

Some do all the thinning by hand, twisting the apples off backward, being careful not to injure the one that remains. This tedious job is aided by a pair of thinning shears, especially when the fruit is thick, as the apples can be clipped off without disturbing

Potatoes Help Trees.

If you can possibly spare them, put a few potatoes under each tree around the roots. The rotting potatoes furnish moisture and some plant food. If they grow, let them, but do not attempt to dig the potatoes.

Control Fire Blight. Fire blight is easier to control than most people believe, only it requires the utmost vigilance and careful watching, together with the prompt removal of all blighted limbs as soon as they appear.

Farmer Can Make Money by Culling Farm Flock

Each year a nice little profit could be made by the average farmer by giving his hens a little study and culling out the poor layers, thus allowing more room for the good layers, saving on feed, labor, time and closer atten-

The good poultryman will cull his flock the year round beginning at incubation, but for the farmer who doesn't make poultry raising a business, and wants to make it a profitable side line, one thorough culling each year will increase the production average of his flock. About the middle of the mating period is the proper time to give your flock a good culling. This will vary with different flocks, but usually comes in the middle of July, August, September, and the first part of October. The characteristics which distinguish the poor layer from the good are most evident at this time. The poor producer will not lay during the fall and winter months. A careful culling at this time will reduce the feed bill but not the egg pro-

Culling pullets is based on an estimate of the future production of the bird. Culling hens is based on her past performances.

A careful culling of your pullets just before they start the laying season will improve the production of your flock. The pullets that mature early, showing best body development and redness of comb, should be saved. Pullets that are undersized, lacking vigor, deformed or hatched too late Horses Are Annoyed by for winter production should be culled. Select pullets with prominent eyes, broad back with the width well carried to the tail, broad head and a deep rectangular body.

To cull a flock right each bird must be handled. In order to save time and enable one to go through a large flock of birds in a short while some means for catching the hens should be arranged. A coop or crate open at one end so the hens may be driven through dusted over the leaves, or put in water a small door in the hen house into the in the proportion of an ounce to 3 gal- | coop is a good method. If the coop lons, and sprayed on the leaves, will has an opening in the top so the birds kill the slugs and not poison those who can be lifted out, you can cull the

> Molting is one important point to consider. When a hen molts she has finished her laying season. The early molters, that is, the hen that molts in July, August and September, is a poor producer .- Phil H. Hayes, Extension Poultryman, Oklahoma A. and M.

Only Quality Eggs Get High Prices in Summer

Egg markets of the country are overloaded at this season of the year, and thus eggs are sold on a quality basis duced. and not simply as eggs.

And because eggs are not "just eggs" these days, and because quality eggs are the only ones that get the prices, the wise poultryman takes every step to put a super egg on the market.

as breeding is over and being very par- to pigs on rape pasture. Some farmticular to keep broody hens off the ers have believed that rape pasture nests, for a "setting" hen can start the alone is a satisfactory supplement for process of incubation after a few

R. E. Cray, assistant poultry specialist at the New Jersey State college, suggests also that eggs be gathered twice a day and kept in a cool, dry, clean place. Eggs should be shipped often and in clean, dry cases with good quality of the entire case of eggs. He | pounds. further adds:

Keep the nests dry and clean, as washed eggs will not keep very long in

Cover the eggs up when on the way to the station and keep them out of the sun at all times.

Be sure to grade more carefully during this season if you would get high

Always Catch Ducks and Drakes by Their Necks

To pick up grown ducks and drakes, always catch a bird by the neck in a firm grasp. Never pick up a duck by the body. If you do, you will make trouble for yourself and the duck. You are liable to bend or twist, or dislocate, or break the bones of the wings and legs. You can carry three or four ducks, or more, as many as you can lift, between two hands, in front of your body. Do not be afraid of strangling the ducks, or breaking their

In Shipping Live Birds

Uniformity Is Big Factor When shipping live birds, sort them as to size, age, color and sex, and don't crowd the coops. The buyer will always pay more for uniformity in color and size, because these factors appeal to his eye, just as good food daintily served appeals to the palate.

Poor Place for Chicks. Ground where last year's chicks died isn't good ground for this year's chicks. Move the coops and brooders,

Hog-Growing Contests Make Better Breeders

(Prepared by the United States Department of Agriculture.)

Hog-growing contests in which the object is to make a litter weigh a ton when six months old have demonstrated the soundness of the recommendations on breeding, feeding and management which have long been made by the various state department stations and the United States Department of Agriculture. In one of these contests conducted last year by the Indiana Live Stock 'Breeders' association 555 farmers enrolled and 33 of them raised 36 litters which weighed 2,000 pounds or more at the end of 180 days.

The important facts for pig producers to remember, says E. Z. Russell, in charge of swine investigations for the United States Department of Agriculture, is that all of the winning litters were farrowed and suckled in clean quarters; all were sired by purebred boars; 28 of the dams were purebred, 6 were high-grades and 2 crossbreds; none of the 36 litters contained fewer than 10 pigs; and all of them were farrowed by old sows. On the average, therefore, the pigs in these record litters weighed 200 pounds when they had reached the tender age of

Many states are holding similar contests this year, says the department, and it is expected that the results will make a large number of converts to the principles and practices of better breeding, feeding and care, not only for hogs, but for all kinds of farm ani-

Botfly Pest in August

During August, horses are annoyed to a considerable extent by the presence of botflies. These flies are about the size of honeybees, and are most annoying to horses' legs.

Botflies deposit small yellow eggs, and cement them to hairs at the time they are laid. During the late fall and early winter the eggs enter the horse's mouth. Later the eggs hatch in the stomach, and develop into the larval form known as bots. They attach themselves to the lining of the stomach, where they remain and consume some of the nutriment that should nourish the horse. During late spring and early summer the bots pass out in the manure. They at once burrow into the ground, where they undergo changes in their life cycle, and soon emerge as fully developed botflies.

Bots produce no definite symptoms, neither is there any satisfactory treatment that can be applied. Prevention is easy, and practicable to a considerable extent. Every few days during the fall months all hairs should be clipped off that contain eggs of botfiles. By thus reducing the number of eggs the number of bots will be re-

Pigs on Rape Pasture Require Some Tankage

Tests in hog feeding conducted by W. L. Robison of the Ohio experiment Quality eggs are produced by taking station show an advantage of feeding the male birds out of the pens as soon | some tankage as a supplement to corn

Pigs weighing 36 pounds and fed a ration of corn 19, tankage 1, parts by weight, for 18 weeks on rape pasture weighed 171 pounds at the end of the

A similar lot of pigs full fed on corn alone but on rape pasture for 18 fillers. A moldy filler will spoil the weeks made a final weight of 146

> The average daily gain for the tankage-fed group is 1.1 pounds and ninetenths of a pound for the lot full fed on corn alone.

The tests show that rape is a valuable pasture for swine, but it will not fully supplement a full-fed ration of

Self-Feeders for Swine Fattening Reduce Cost

Wherever labor can be saved on the farm and results accomplished just as satisfactorily, by all means save the labor. Results of experiments at the University of Missouri College of Agriculture with self-feeders for fattening hogs show that those eating from a self-feeder gain more rapidly than those depending on the hand-feeding methods. The amount of feed necessary to produce a pound of pork remains practically the same, but the amount of labor is usually reduced. It is this decrease in labor which enters as a factor in cheapening the cost of producing pork.

Profitable to Provide Plenty Shade and Water

It is a profitable practice to provide plenty of shade and water for the hogs. While trees furnish the best shade a simple sun protection in the form of a straw or brush roof supported by posts will be satisfactory for this purpose if left open at the for a SIX-NIGHT treatment. sides. The hog is not equipped with with each TUBE. Mailed in plain wrapper sufficient sweat glands for cooling entirely sealed. purposes and needs this help during the heat of summer.

Summer Find You Miserable?

It's hard to do one's work when every day brings morning lameness, throbbing backache, and a dull, tired feeling. If you suffer thus, why not find out the cause?
