OUT OF ONE POCKET—

—INTO ANOTHER?

This rural electric system is one of about 1,000 all over the country. While some of these systems have been in existence for as long as 18 years, many people still do not really know just what we are.

There is no mystery about us, or about any of the rural electric systems. Our electric system is business, like the drug store or the feed store. Only instead of selling drugs or feed, it distributes and sells electricity.

There are two differences between our operation and that of most other businesses. First, every one of our member-consumers is also an owner of the system. Second, and most important, our business is not conducted for profit.

Some people have not understood this non-profit angle. Really, it's very simple. Every person who buys electricity from this system is an owner of the system. Consequently, the rate he pays for his electricity does not include a margin for profit, since that would be taking money out of one pocket and putting it in another. It's exactly like the druggist selling himself a bottle of aspirin. He doesn't pay himself the retail price, which includes his profit. He pays only what it cost him to get the bottle of aspirin into his store.

So, the member-owners of this system pay for their electricity only what it costs them to buy it at wholesale and distribute it to themselves. That is the sole purpose of this system — to provide its members with electricity at cost. It's not much of a mystery when you know what it is.

Alert Cat Turns in Two Fire Alarms in Two Days

Clayton, N. Y. (AP) — A gray and white cat named Muggsy has seven toes on each foot and he makes good use of them. When an electrical storm knocked down a high-tension wire outside the home of Mr. and Mrs. Cecil Baker, Muggsy's owners, the cat clawed at the blankets of Mrs. Baker's bed until she woke, saw sparks showering about the house and notified the power company.

The next night Muggsy again woke Mrs. Baker when a warehouse fire became visible from the bedroom window. Police said her, phone call was their first word on the blaze.

The eggs you are going to use in a cake should be removed from the refrigerator about an hour before mixing time; when they are at room temperature they beat up better than when they are chilled.
