tioned about 250 miles east of Cape Hatteras. Meteorologists hope, how ever, that the ship will be replaced soon with an automatic buoy weath

The methods available for pre dicting where and how fast a hurricane will move are still inade uate, the NYU scientist says. But the answers may be discovered in the extensive research on the fore casting of storms now being con-ducted by the Weather Bureau, Air Force, Navy, and many of the nation's universities

"It's doubtful." Dr. Spar believe that exploding an atom bomb would have any effect on a hur ricane, unless the explosion itself were of the dimensions of the In that case, the storm might be far less dangerous than the bomb.

"It has been suggested that an atomic explosion in a baby hurri cane when it is just forming and the energy of the storm is still small, might prevent its development. Perhaps this is possible, but can also be argued that the explosion might cause a worse storm The best guess is that there would be no effect. It is significant to remember that the Pacific atom tests did not produce any large or developing storms."

No two hurricanes are alike, Dr. Spar points out. The winds in the storms are always changing and the only certain factor is that they do blow counterclockwise in the Northern hemisphere and clockwise in the southern hemisphere a speed of 75 miles or more an hour may be moving less than 10 miles an hour. A slight change in storm direction may mean the difference between disaster and pleasant weather.

"The path of a hurricane is usually parallel to the winds in the upper atmosphere," Dr. Spar ex-"The storms move like small whirl or vortex in a stream. Streams that carry or steer the hurricane are currents of air more than a thousand miles wide and When this ty. several miles deep. current of air flows far to the north, the storm moves northward. This is what happened to hurrianes Carol and Edna. They were steered by a current of air extending far to the north and they oved northward. The same thing happened with a similar hurricane

Counterfeit Money Gag Results in Probation

San Francisco — (AP) — Two printers counterfeited U. S. currency, then lit cigarettes with \$5 and \$10 bills and tossed the "money" around in a bar. Some bills later

howed up in Honolulu. In placing the men on three years' probation, Federal Judge Michael J. Roche declared the weird gag was the "most nonsen-sical" thing he ever encountered.

haul your corn from the field already shelled. The Minneapolis-Moline Uni-Picker Sheller attachment for the MM Uni-Tractor gives you a compact, self-propelled harvesting unit that does your corn harvest in one fast trip through the field ... cuts harvest time ... cuts costs ... gets top value from your crop.

GET YOUR CORN CROP EARLIER

With the MM Uni-Picker Sheller, you can pick and shell corn with up to 25% moisture content. You harvest your corn earlier, while the stalks are still standing ... before there is wind or corn borer damage.

PROFIT BY THESE MM ADVANTAGES

- · QUICK, EASY MOUNTING ON THE UNI-TRACTOR LARGE SHELLING CAPACITY-REDUCED CRACKING OR
- BRUISING OF KERNELS
- POWERFUL CLEANING FAN FOR CLEANER, DRYER CORN . 37-BUSHEL GRAIN TANK-HIGH SPEED AUGER UNLOADER

Stop in and get the facts on how you can save and profit by your corn with the one-trip MM Uni-Picker Sheller.

ATTENTION MR. FARMER . . .

HERE IS SOMETHING NEW - THE MM-UNI-FARMER - YOU CAN

- -PICK AND SHELL CORN
- 2—COMBINE SMALL GRAIN 3—CORN SNAPPER
- 5-HAY BALER ALL ON ONE TRACTOR
