805 ARENDERS ST.

A walled in garden with pool, adjoining a secluded covered porch joined to the living room by sliding glass doors, merges the outdoors with the indoors in this plan. Another covered dining porch facing the rear garden and a covered entrance porch in front are among other features of this house. An outside basement entrance opens this valuable cellar area for the storage of garden implements. This is plan M466-AP by Rudolph A. Maetrn, architect, 90-04 161st St., Jamaica 2 N. Y. The house covers 1,604 square feet without garage and porches.

Dream Kitchen May be Far Machine in Use Off; New Stove Best Now At Long Last

Comfortable height of built-in oven unit is demonstrated by Alma Chambers, kitchen expert. She says a new range and cheerful color scheme can bring your dream kitchen nearer than waiting for the in-

By VIVIAN BROWN AP Newsfeatures Writer

Are you waiting for that dream kitchen? A magic room where you could push buttons all day long and have little robots do your

Well, better settle for what's around now, if you get the chance It may be years before that kitch-en comes to pass. So says charm-ing Alma Chambers whose father ted the first insulated range She explains:

"A new stove in your kitchen is worth two in that dream catalogue. If the man of the house offers to buy you one he has seen on sale or likes now, don't make the mistake of saying 'I think I'll wait for a skyblue range or an atomic powered one.' Take what you can get right now."

Miss Chambers, who assists her father in business, has seen dream kitchens evolve, but they do take years of planning after those first rough sketches, she says.

a stove too so that panels may be removed and new ones inserted when you've tired of the color or would like to replace white with

or organizing your first one, put plenty of thought into your kitchen Chambers advises. She sug gests:

"Buy the best equipment you can afford. Instead of investing in broilers, toasters, deep fat fryers, put that money into your stove. Some stoves come with built-in

Buy a refrigerator that will hold all the frozen foods your family needs. Make sure cabinets are placed strategically so that you do not wear yourself out reaching and bending for things."

Miss Chambers thinks color should be encouraged in the kitch-en. It doesn't need to be in all of your appliances, cabinets and util ities, but your color scheme should be inviting she says. It should look so pleasant that even the man of the house will volunteer to whip up a meal. Says Miss Cham-

pensive hospital machine is in use at the Hadassa Municipal Hospital at long last, reports received here from Israel say. It is an electrocardiograph (a complicated appa-ratus to measure heart action) which belonged to the late Dr. Henry H. Haft.

His widow and Dr. Irving L. Ershler who took over Dr. Haft's practice when he died in 1952 vanted to give it to Israel. But red tape surrounding international shipments of scientific equipment stopped them.

It was surplus, because Dr. Ershler had his own machine and it lay in storage until Mrs. Mark Silverman came to the rescue. She packed it in two 35-pound units and took it as hand luggage on a trip to Israel. She reports the crates proved a bit uncomfortable sliding around the stateroom in a heavy storm, but she tells how Dr. dock to say there was urgent need for the machine

Dr. Ershler says he was able to tell Mrs. Haft that her husband's machine, with his name plate still on it, was in active use before she died in a hospital here.

rooms and cooking burners in the family get together room.

Hot plates and burners will be hooked up right in the dining room so that casseroles may be can afford. Instead of investing in taken right off the burner and put all sorts of accessories such as on the table. But these things will not be available at consumer price level for three or four years at least. Miss Chambers reiterates:

"Enjoy whatever you can get now and don't sit around waiting for decentralized cooking. It'll be fun when it gets here and that's the only way to look at it."

Stella Postoffice Opened in 1892

By A. D. BNNETT .

(Editor's Note: The following is a summary on the history of Stella presented at the meeting of the County Historical Society Saturday. Mr. Ennett has long been a resident of the western part of the where Stella is located).

Stella postoffice was opened in 1892. Prior to this time, the set-tlement was known as Barkers Bridge. Before the time of Barkers Bridge, there was a local ferry, connecting the two counties of Carteret and Onslow.

The Sabistons seem to have been the earliest settlers of prom

in the area. A Doctor Barker, of English parentage, married a Miss Sabiston, and this was the beginning of the Barker family at Stella, abo year of 1880.

Naval Stores Trade

There was some very early trade in naval stores, carried by sail boat mill. to Swansboro, which for a long among the names of those remaintime was the principal naval stores depot, for eastern North Carolina, second only to Wilmington, along the entire North Carolina coast.

Negro population, plus the fertile day labor. At this time, 1826, the soil, well drained by the White Oak prevailing price for day labor was River, on whose bank the village of 40 to 50 cents per day — and this River, on whose bank the village of 40 to 50 cents per day — and this Stella stands.

A Captain K. E. Terry hailing from Boston, Mass., was general superintendent of the plant, and he brought with him a number of northern men to man the mill, several of whom married and remain-ed in Carteret, though Captain Terry returned after closing of Truckner and Kuhn

ing.
For about three years Stella en-

crop. Its importance was probably near Long Point plantation just emphasized by the rather large above Stella supplied much of the Negro population, plus the fertile day labor. At this time, 1806, the

Like most places in the South at this time, the motive power for ginning cotton, was supplied by the same faithful farm animal, that pulled the plow, in cultivating it.

About 1890 the White Oak River Corp, was formed, for the purpose of manufacturing lumber from the near virgin forests of pine, growing along the banks of White Oak River.

Northerners Man Plant

to 12 hours, or "from sun to sun."

The manufactured lumber was towed down White Oak River on and loaded aboard three-mast schooners that came in Bogue Inlet, and lay beside Dudley Island Channel until loaded.

Most all of this lumber was shipped by schooners to New Bedford, Mass. Stella's first steam boat, the "Nannie B" piloted by Capt. D. B. Wade of Morehead City, and Capt. Bob McLean, of Stella, Like most places in the South at to 12 hours, or "from sun to sun."

and Capt. Bob McLean, of Stella, as chief engineer, towed the barge of lumber down the White Oak River. The "Nannie B" was a wood burning" steamer.

During the "boom days" of Stel-la, the families of Barkers, Pel-letiers, Weeks, McLeans were socially

ally prominent.
At this time, Stella boasted a hotel, dance half and its first and ling.

lepot, for eastern North Carolina, econd only to Wilmington, along he entire North Carolina coast.

Cotton was an early commercial day. A large Negro population of the course of state.

Keeping Hot Air Out Is First Step for Cool House

Houses, like closed automobiles n sun-baked parking lots, can be intolerable heat traps in het weather. The way most of our houses are designed and built, the materials used in them, even in the way we use our homes, make summer cooling a pretty complicated problem.

are prepared to pay unnecessary operating costs for a house no ready for efficient air conditioning. The color of the roof, the size and location of windows, trees in the yard, the amount of breeze through the attic, even the material we use for a shower curtain can mean many dollars in the family budget when we try to make a house

Don't think a bathroom showe curtain has nothing to do with comfort in the living room. A little thing like that has baffled engineers. C. W. Nessel of Minneapolis-Honeywell, who served as an expert on the Austin, Texas, air-louvers) are the principal means conditioned village, told us the of protecting the house from the other day of an interesting adven-sun's rays." ture with a wet shower curtain.

A homeo-ner complained that hot during the morning, but per-feetly cool in the afternoon when the outside temperature soared to the outside temperature soared to published by the United States Air 100 degrees. Tests showed abnor- Conditioning Corp., Minneapolis.

mal humidity in this house imme-diately after 8 a.m. Humidity, of course, has a lot to do with keep-ing cool. The drier the air, the warmer you can stand it.

Well, the engineers found that a canvas shower curtain remained paked after the family's morning baths. It took all morning for the curtain to dry - by evaporating its moisture throughout the house. As soon as a nonabsorbent plastic It seems that we just can't say As soon as a nonabsorbent plastic "Let's air condition." unless we curtain was substituted, the problem was solved.

Keeping heat out of your house is the most important step toward keeping the place cool. This is the conclusion of the University of Illinois Small Homes Council, which has issued a comprehensive bulle "If the sun's rays," says this study, "can be kept off the walls,

glass areas, and the roof, and if the hot outdoor air can be kept door temperature can be more eas ly held in check. Shading the se and the use of other sun con-Shade trees to protect windows

and roof on the south and west air conditioned house was too sides of a house are stressed in an

Tree-shaded walls are only slightly warmer than the outside air, but walls protected from the sun run temperatures of 135 degrees and more. Unshaded roof tempera-tures have been recorded from 140 to 180 degrees, with attic temperatures as high as 150.

So insulation and plenty of ft becomes a must whether you at-tempt to cool your house with fans or with air conditioning. A new book, "Insulate and Air Condition Your Home," cites case studies to show that adequate insulation can reduce the first cost and operation of home air conditioning by as much as 50 per cent.

Co-authors Groff Conklin and Arthur M. Watkins advocate as uch as 6 inches of mineral wool insulation in the floor of an attic Conklin is a former builder and Watkins is an air conditioning en-gineer and associate editor of a leading building magazine. Their contention seems logical especially in view of the inevitable settlement encountered in loose insulating materials.
