Industry Ready to "Keep 'em Rolling" for Defense

Graphic illustration of the way in which one of America's greatest industries gears its activities with the United States Army for national defense is found at Little Falls, Minn., where the greatest peacetime maneuvers in the history of the country are being held Aug. 3-Aug. 24. To "keep them rolling," Chevrolet, one of the largest suppliers of motor transport equipment to the nation's armed forces, has set up through one of its dealers, the Bert Boston Motor Co., of Minneapolis, a complete parts and service headquarters in the military reservation at Little Falls. More than \$10,000 worth of parts is maintained at this depot, where three service representatives are on duty 24 hours daily to service Chevrolet equipment in use. The 85,000 troops in actual combat maneuvers will use 1,100 Chevrolet transport units, including officers' cars, reconnaissance cars, hundreds of trucks adapted to special uses, and military ambulances. Upper left in the photo shows army transport crewmen servicing an ambulance. Upper right is the Chevrolet parts and service headquarters tent, where service experts are always on duty. Lower left is Lieut.-Col. R. F. Rossberg, of the Minnesota National Guard Quartermaster Corps. At lower center, an officers' car used by the major-general in command of the Little Falls encampment is being serviced. Lower right is an interior view of the Chevrolet parts tent, showing completeness of stock.

GARDENING BECOMES YEAR-ROUND PROJECT

No longer is gardening considered exclusively a summer enterprise. H. S. Niswonger, horticulturist of the N. C. State College Extension Service, points out that it is possible to have fresh vegetables from the home garden on a year round basis in North Carolina.

"During September and October, there are many vegetables which may be planted," Niswonger says. "These include winter spinach of the Longstanding and Bloomsdale varieties, Siberian kale, Southern Giant Curled mustard, Purple Top Globe turnips, and Seven Top turnip greens. "Beets and carrots planted the first of September in Eastern Carolina should mature before freezing weather. Cabbage plants of the Charleston-Wakefield variety, usually will produce heads about Christmas time in the East if planted around September 1. This variety of cabbage will stand a lot of cold weather."

The horticulturist also recommends green onions as a winter delicacy from the home garden. "Put out sets of the Silver Skin variety, and for green onions next winter and spring set out the multiplying variety. After thinning out plants to be used for green onions, the remaining plants will develop into mature onions," he says.

Niswonger recommends that strawberry plants be fertilized in Eastern North Carolina in early September and in the mountain and northern Piedmont area during late September or early October. "For all regions, apply eight to ten pounds of a 5-8-6 fertilizer per 100 feet of row. Put one-third of the fertilizer on each side of the row and the other third on top. Develop a thin matted row of plants with the plant bed 18 inches wide, and the runner plants spaced a hoe-width apart. After the 18-inch row is filled with the spaced plants remove all surplus runner plants around October 1 to 15," the Extension specialist said.

DRINKING DRIVERS ARE WARNED

Drinking drivers were responsible for 48 street and highway fatalities in North Carolina the first six months of this year, according to a summary just completed by the Highway Safety Division. Ronald Hocutt, director of the division, said the accident records for the first half of 1940 show that 50 drunken or drinking drivers were involved in 42 fatal accidents in which 48 persons were killed.

"The drinking driver is not the most numerous type of offender on our highways," commented Hocutt, "but he certainly is the most dangerous. The person who has taken any alcoholic beverages into his system, even one drink of liquor, is a highly potential menace to every other person using the highway on which he drives. Alcohol sometimes stimulates those who drink it, causing them to become exhilarated and a little more reckless than usual. Then again it sometimes has a depressing effect, and produces drowsiness. Still again, liquor often confuses and befuddles the mind and impairs the vision. And it always affects the driver's reaction time, hampering the coordination between mind and muscle that is so essential in safe driving."

Safety Director Hocutt strongly advises all individuals who do any drinking to get someone else to do their driving for them. "Drinking and driving just don't mix," he declared.

Under present plans of the U. S. Department of Agriculture, the food stamp plan will be extended to a total of 175 to 200 cities or to the members of 5,000, 000 relief families by the end of the fiscal year.

The U. S. Surplus Marketing Administration has been authorized to purchase up to 5,000 tons of dried peaches for distribution to needy families of the country.

The Cedar Waxwing

The Cedar Waxwing, sometimes called Cherry Bird or Cedar Bird, is brownish gray; it has a yellow band across the tip of the tail; the ends of some of the wing feathers are red. The length is about seven inches.

This bird travels about in flocks except during the nesting season, which begins about the first of June and continues till

some time in August. It consumes both fruit and insects, both cherries and cankerworms being its favorite foods. Flocks of these birds have often been observed sitting in a row and passing food from one to another for several rounds.

The Waxwing is a beautiful bird, of interesting habits, and, although it is fond of fruit, is considered an asset.—(James Hutchins).
