under the Act of

EASTER SEAL SALE

The North Carolina League for crippled children conducts an annual seal campaign to work among the state children who need this help. The show record of the League is that there are 62,000 children in North Carolina who should have a chance—a chance for improved physical treatment, proper schooling, special training. All of these are aided by the spring seal sale.

social and individual appeal to citizens of North Carolina that these too may be aided in overcoming their handicaps and in becoming happier and more useful citizens of the future. The seals are now available and will be on sale through Easter Sunday April 6.

Sixty per cent of the funds from the sale will be kept in the county, and forty per cent will be sent to the state League.

When you are contacted by a member of the committee, buy some of the seal and use them on your letters and cards.

Veterans Administration approved 863,308 applications for National Service Life Insurance during 1946

SOCIAL SECURITY AND THE VETERAN

From what dates or periods are Old-Age and Survivors Insurance benefits payable to survivors of the veterans who die after their discharge from Service?

If a veteran died prior to August 10, 1946, and after separation from the service retroactive to and including payments to survivors are the month of his death, provided application is filed before February 10, 1947. If the veteran died on or after August 10, 1946, the payments may not be retroactive for more than three months prior to filing. It is important therefore that widows or other sur-

NOTICE OF FINAL SALE
In The Superior Court
NORTH CAROLINA
YANCEY COUNTY
Yancey County

Zeb Blankenship and wife, Mrs. Zeb Blankenship

Under and by virtue of a judgment of the Superior Court in the above entitled action appointing the undersigned as Commissioner to sell the hereinafter described lands to satisfy said judgment for taxes for the years of 1943, together with interest, penalties and costs thereon, and subsequent taxes, the undersigned will, on the 1st day of April, 1947, at 10:00 o'clock A. M., at the Courthouse in Burnsville, North Carolina sell the hereinafter described lands to the highest bidder, for cash, to satisfy said judgment, together with all costs and subsequent taxes, said property being in Cane River Township, Yancey County, North Carolina, adjoining the lands of H. A. Proffit, and described by metes and bounds as follows:

FIRST TRACT: Being the lands described in a deed from R. F. Ray and wife, J. A. Ray, to Geneva Blankenship, December 20, 1911, which deed is recorded in the office of the Register of Deeds for Yancey County, North Carolina, in Deed Book 51, page 131, reference to which is hereby made for a more complete description of said lands.

SECOND TRACT: Being the lands described in a deed from R. F. Ray and wife, J. A. Ray, to Geneva Blankenship, January 6, 1927, which deed appears of record in the office of the Register of Deeds for Yancey County, North Carolina, in Deed Book 65, page 382, reference to which is hereby made for a more complete description of said lands.

This Feb 22, 1947.
BILL ATKINS, Commissioner.

Suggestions for Successful Tobacco Plant Production

In sowing plant beds for the 1947 crop, growers will find that liberal fertilization, blue mold and wildfire control, and proper plant bed management will do much to insure an early supply of good strong plants. In 1946 much of the low grade Burley tobacco was a result of late transplanting.

Factors in Successful Plant Production
1. Blue mold and wildfire can be controlled in a practical way and economically (For details see your county agent).

2. Last year many Burley plants showed nitrogen deficiency and were late because of this fact. Growers are urged to use about two pounds of a 4-9-3 plant bed fertilizer per square yard of bed surface. This fertilizer is broadcast on a well pulverized seed bed and raked into the soil with a garden rake immediately before seeding or one or two weeks before seeding. Growers who have used Cyanamid or Cyanamid and Uramon for plant bed soil sterilization should use about one to one and one-half pounds of fertilizer per square yard and avoid disturbing the soil deeply as the fertilizer is applied. A garden rake is most nearly suited for raking the fertilizer into the upper surface.

3. Growers who have experienced difficulty due to freezing out of plants will find it helpful if two seedings are made. That is, prepare and sow the plant bed fairly early, then prepare and sow another bed later as insurance against freezing out of the earlier plants. Many growers follow the practice of an early and late seeding on the same bed. That is, sow the same bed a second time about three weeks after the first seeding. The seed are sown on top of the ground with out disturbing the surface of the soil. By this practice if the early seeding is not

frozen out, the later seeding is shaded so that they do not interfere with the early plants. If the early seeding is frozen out then the later seeding has room to develop.

4. Watering the bed at seed germinating time will in many cases mean the difference in a stand of plants or failure. Since the seed are sown on the surface of the ground, dry, crusty soil at seed germinating time will cause many of the young plants to die.

5. During the plant growing season, additional nitrogen used as a top-dressing may be necessary to push the plants along to avoid late transplanting. Usually from one to three applications of about two to five pounds of nitrate, such as nitrate of soda, per 100 square yards of bed space will be quite sufficient to hasten the growth of slow plants. This nitrogen, two to five pounds, may be dissolved in fifty gallons of water and applied to 100 square yards. Fifty gallons of clear water should then be used to wash the plants off. Some growers use the pellet form of nitrate of soda and broadcast two to five pounds over 100 square yards of bed while the plants are dry. A corn broom is then used to brush the pellets off the plants on to the soil.

6. Plant beds should not be located in the depths of the narrow, shady gorges but advantage should be taken of protected coves where level and fertile soil

AREA LEGION AUXILIARY MEETING

The fifth-area meeting of the American Legion Auxiliary will be held in Central Methodist church Asheville on Saturday Sessions will begin at 2 o'clock

can usually be found. These locations should be exposed to the south or southeast for most direct sun light. (By Roy R. Bennett, Extension Tobacco Specialist State College, Raleigh).

Would You Like to SAVE 350 HOURS' WORK A YEAR?
Pump Your Water Automatically!
One farmer found that it took 350 hours to pump and carry 605 tons of water a year needed by his dairy cows. That's 35 ten-hour days, once wasted, now saved by an automatic supply of running water.
A Myers Water System will furnish all the water you need at surprisingly low cost—about 4 cents for a thousand gallons. Come in, see the many water systems offered by Myers Ejecto and plunger type systems.

SPECIAL FILM WILL BE SHOWN HERE

The full length picture "Mom and Dad", released by Hygienic Productions will be shown at the Yancey Theatre one day only—Thursday, April 3rd.

The picture has an all star Hollywood cast, and has won acclaim wherever it has been shown.

Elliott Forbes, famous hygiene commentator, will appear in person at all performances.

The picture is a complete two-hour educational attraction and in addition to the main story, actually contains two highly educational, interesting and timely hygiene films.

Mr. Forbes, who is best known to radio listeners in the Middle West, Southwest and west coast areas because of his network broadcasts on health and hygiene subjects, should prove an interesting addition to the theatre's screen program.

"Mom and Dad" is a simple, human story of everyday life in an average American town. This powerful modern-day drama is clean, moral and educational and has received endorsement from leaders in every walk of life.
