SELF FEEDING BROOD SOWS

Many farm chores have been eliminated by labor saving devices, Party with a fine being made on but there are a few that are still all those who attend the party difficult to adapt to automation. Hog farmers are confronted with one of these in the management of

Sows have been hand-fed since the beginning of hog farming. Nowof Mr. and Mrs. Earl C. Wilson of adays, some hog farmers are experimenting with self-feeding their sows. Research and experience have shown that sows can be self-fed, although there are problems in doing it.

The problems in feeding brood sows by any method usually involve getting them to eat the right balance of nutrients without eating too much. It's easy to control this by hand-feeding. Self-feeding requires some changes in the feeding

The good hog man usually wants his sows to eat a mixture of about four parts grain and one part good supplement. Each sow gets four to six pounds of this ration daily, depending on her condition. When pasture is not available, good le-

gume hay is offered free choice. In self-feeding, where the feed is kept in front of the sow in a self feeder at all times, there is a problem of limiting the feed intake. This can be accomplished pretty well by mixing chopped roughage

with the grain and supplement. Research at the Ralston Purina farm in Missouri indicates that when ground shelled corn is fed, four parts of corn, one part of supplement, and three parts of ground legume hay make a good ration for self-feeding. Other adjustments are made when other grains are fed, so that the roughage factor limits consumption.

It will cost a little more to selffeed than to hand-feed. There is the added expense of chopping the roughage and mixing it in the ration. Also, sows may nose around in the feed and blow out some of the chopped roughage to get to the grain, causing wastage. But selffeeding sows can be done as labor saving device.

Attention Hemorrhoid (Pile) Sufferers

A Wonderful New Discovery Just Put On The Market. An ointment that has been used for the past two years by a prominent Mt. Holly, N. C. doctor who states "During the past thirty-seven years of gen. eral practice I have used all the well known and accepted remedies for the relief of Hemorrholds-without a doubt the formula known as SUTHERINE gives the most satisfactory relief that I have ever used." SUTHERINE is especially recommended for the soothing relief of pain and itching in Hemorrhoid (piles). In many cases bleeding has been stopped Ask for SUTHERINE at all drug stores.

By FRANKLIN J. MEINE Editor, The American People's Encyclopedia

THE candlefish doesn't have the I high voltage of an electric eel, but it's one of nature's more generous contributions to mankind. It's a small fish allied to the smelt. which is found in vast numbers in the river mouths off the northern Pacific coast of North America. The fish is about 12 inches long, greenish-olive in color, with a

used for food. It owes its popular name to the fact that the flesh is so oily it will burn like a candle: and the fish is dried and used by Indians as a torch, as well as for

Newspapers and magazines still mention Berchtesgaden, the German village in Bavaria where Adolph Hitler built a twe-story chalet overlooking the village. One of the rooms in the chalet had a 25 by 10 foot window presenting a fairy-tale-like view of the viilage below. It had a maze of corridors three miles long and was hewn from rock. Above the chalet, a road and tunnel led to an eleval tor rising 300 feet to his octagonal "eagle's nest" at the top of the
