THIS WEEK'S SAFETY MESSAGE

By Cameron F. McRae, M. D.

From the "Home Safety Checklist" developed by the Eastbay (Calif.) Chapter, National Safety Council, we take the following list of questions relating to the prevention of electric shock.

Do you disconnect electric equipment and keep it out of reach of young children when not in use? Especially power tools?

Do you frequently check and replace worn cords?

Do you always cover unused electrical outlets with inexpensive protective devices, so your child can't be shocked? There is enough current in house circuits to kill. If a fuse blows out, do you determine the cause of the overloaded circuit instead of replacing with a heavier fuse?

How come the new Ford rides so smooth and solid?

It's the new inner Ford that gives you a big-car ride at low Ford prices

Folks just naturally love Ford's lower, sleeker silhouette. And they love Ford's new Thunderbird V-8's and Mileage Maker Six. But the thing that's really got 'em buzzing is Ford's new ride. In the new kind of Ford, vital riding features team up to give you the smoothest going in the whole ride world. For example:

More weight and length Head for the roughest road in the new kind of Ford. Notice how the biggest bumps lose their "thump." One reason is that this biggest, longest, heaviest Ford has the extra "beef" to give a smooth, road-hugging ride.

Better balance One of Ford's nicest back-road habits is to make believe the rough spots aren't there. Proper weight distribution and precise balancing let Ford iron out bumps for better than many of the higher-priced cars.

New automatic variable-rate rear springs Going from a highway to a byway in a Ford, is like going from satin to silk. New design allows Ford's rear springs to "soften" or "stiffen" depending on road conditions. You get a smooth ride all the way!

New swept-back Ball-Joint front suspension Ford's new, stronger front suspension is designed to soak up the shock of rough roads. The new swept-back design lets wheels "roll" with the bump and absorb it going away... for smoother, steadier sailing.

New lower-pressure tires Even Ford's tires are new for a better ride! Although they require less air pressure, they hold about 17% more air for cushioning the car. This means a softer ride... without sacrifice of Ford's good handling characteristics.

More comfortable seating There's no sag when you sit in a Ford... even on long trips. Comfort-contoured seats, rigidly anchored, have advanced springing for greater comfort and longer life.

More body insulation Ford has more body insulation—protection against weather, dust, and noise—than any car in the low-price field. You ride through city traffic in library-like quiet.

No metal-to-metal chassis and body contact Only Ford in its field uses 20 Cushion Quiet rubber body mounts... more than any other low-priced car. It all adds up to a smoother, quieter riding car.

You Have a Receipt... Automatically!

Here are three reasons why it pays to have a checking account: (1) You automatically have a legal receipt (your cancelled check) proving you have paid the bill. (2) You have indisputable record of payments made that are tax-deductible under the new Federal Income Tax law... very important to every taxpayer. (3) Your clear record of expenses is a tremendous aid in budgeting living costs and saving money.
