First Feeding In Mass Polio Campaign March 8

It would be easy to assume that everyone knows about the mass Polio Immunization program to take place in Mitchell and Yancey Counties starting with the first feeding Sunday, March 8th — but there may still be some who have not heard or read what the Medical Association in the two counties are doing to prevent another Polio outbreak — there may also be some who feel it is not necessary to take the vaccine, we can't tell. We hope everyone has made their plans to take their first feeding on March 8th and the second on May 10th — but should there be doubts in your mind as to the benefit of this big undertaking, we have ask Dr. Gorge Kemberly of Bakersville, President of the Mitchell-Yancey Medical Association to answer some questions for us.

Questions And Answers On Oral Polio-Vaccine (Trivalent)

Q. What are the advantages of oral polio vaccine over the other type?

A. The ease with which the vaccine can be given — by mouth, instead of by an injection needle, is a big advantage.

Another advantage is that this oral polio vaccine is designed to provide what doctors call "intestinal immunity" against polio. Thus it not only affords the immunized individual optimum protection against polio by stimulating the production of antibodies in his blood, but also reduces the likelihood of his becoming a carrier of the disease.

The vaccine being used in Mitchell and Yancey Counties is the new Trivalent vaccine. It contains a blend of the three strains of monovalent vaccine. It is taken by mouth and only two feedings are necessary for basic protection instead of three.

Q. How is the vaccine administered?

A. The vaccine is taken orally from paper cups or — if a concentrate is used — on sugar cubes.

Q. Are there any harmful after-effects, such as fever or slight illness, as a result of taking the vaccine?

A. Oral polio vaccines have been administered to millions of persons, with little or no after-effects directly attributed to the vaccine.

Q. How does the vaccine work?

A. After it is swallowed, the vaccine virus multiplies in the digestive tract, stimulating the body to produce what doctors call "antibodies." These are what provide protection against polio.

Q. How long can immunization from polio last after a person takes the vaccine?

A. Experts believe it will give you a relatively long term immunity against polio. Since individuals respond differently and exact data is not yet available, some experts believe a booster dose should be given every two to four years.

Q. After a person takes the vaccine how long is it before he should begin to get protection?

A. Protection should begin in two to three weeks.

Q. What about those who have received previous Salk polio shots?

A. A complete series of two feedings of the new Trivalent vaccine is recommended regardless of any previous shots.

Q. Suppose all members of a family but one get the vaccine, is there a possibility that the person may become immunized from the others?

A. The person who did not take the vaccine might become immunized through transmission from other members of the family — and

this would of course be a beneficial effect. However, this procedure cannot be depended upon.

Q. Does this vaccine help to protect against all types of polio?

A. Yes in Mitchell and Yancey Counties we are fortunate in getting the new Trivalent vaccine. It contains a blend of the three strains of monovalent vaccine. It is taken by mouth and only two feedings are necessary for basic protection, instead of three.

Q. How many doses of the vaccine are needed?

A. Two doses spaced at least eight weeks apart.

Q. Where will this vaccine be obtainable during the mass immunization program?

A. You may receive the vaccine at certain community centers or through special mobile units which will be placed at strategic points throughout the county. Watch your newspaper and listen to TV and radio for further announcements on this.

Q. Can the vaccine be purchased anywhere and taken by individuals?

A. No. It is available only through doctors and recognized institutions like the County Health Department and hospitals.

Q. Why is it necessary to take the vaccine now, when we do not have any incidences of polio in this area?

A. The nation is enjoying relative freedom from polio right now, but it is well known that this disease comes and goes in waves. There is therefore no assurance that the present situation will continue. By the same token we do not have any cases of smallpox, yet we continue to be vaccinated against this disease. The principle is the same, and through this new oral vaccine, we hope to make polio as rare tomorrow as smallpox is today. Experts feel that it is better to conduct a program like this before an epidemic strikes rather than wait until it is here.

Q. What does the vaccine taste like?

A. It is a pleasant-flavored liquid, designed to appeal particularly to children, who are very susceptible to polio.

Q. Would an overdose of the vaccine be harmful?

A. No. In carefully controlled tests, measured overdoses of the vaccine have been given with no harmful after-effects.

Q. Who should take the vaccine?

A. The vaccine may be given to everyone six weeks of age or older.

Q. When will the vaccine be given?

A. Feeding dates are: Sunday, March 8 and Sunday, May 10th.

Q. How much will it cost?

A. A donation of 50 per cent is expected although no one will be refused the vaccine for lack of funds.

Q. Where can I obtain additional information or answers to other questions on oral polio vaccine?

A. From your doctor, from the County Health Department, U. S. Public Health Service.

Former Missionary To Japan Will Speak At Methodist Church

Miss Carolyn Temple, Japan mission veteran of 49 years, will speak at Biggs Memorial Methodist Church on Sunday evening, March 1. At 8:15 Miss Temple will give the program for the Methodist Youth Fellowship. During this service she will show Japanese costumes and speak about Japanese customs. At the 7:30 p. m. church-wide mission study Miss Temple will begin part III of the book, "Our Mission Today," by Dr. Thayer Jones.

Miss Temple was a missionary to Japan from 1913 to 1962, working under the auspices of the Women's Division of the Methodist Church. She served on the island of Kyushu in the city of Fukuoka.

Miss Temple's work consisted of working through the children, using the "Mother's Kindergarten" as a key to the home.

In connection with her work in Japan, Miss Temple said, "Japan's greatest need today is not more food and more food even though that need is very real," she declared. "The greatest need is for people who live by their convictions, who are ready to show the nation the way of real democracy — the Christian way of life."

James Lawrence Hall, son of Mr. and Mrs. E. J. Hall of Route 3, has been named to Brevard College's first semester honor roll. To achieve this rating, a student must earn an academic average of 80 or above.

Young Hall is a member of the Mt. Pleasant Baptist Church and a graduate of Cane River High School.
