Capt. Downing Shows His Peanut Grinder

**News About Nuts**

Ground Peas, Goobers, peanuts, or whatever you wish to call them, peanuts are a delicious, nutritious food. Usually thought of as an accessory food, peanuts are far superior to this, nutritionally and functionally. In many parts of the world, peanuts have been and still are considered staple food.

To N. C., peanuts represent a \$45,000,000 industry, and on an average of 400,000,000 pounds are produced annually. North Carolina rates 2nd in the nation in production, (first in consumption--unofficial guess) produces predominantly the large Virginia type peanut, and

leads the nation in production of this type. This large, high quality nut is found in the best grade of salted peanuts, peanut candy and roasted in the shell peanuts.

Only a small quantity of N. Carolina peanuts are processed into Peanut Butter due to the fact that there is a greater demand for this quality type peanut in other phases of the industry, but the Yancey County Country Store, wishing to produce the finest pure peanut butter, uses the N. C. Grade No. 1 peanut in their grinding machine, which produces peanut butter right before your eyes.
