Facts Released On Trellised Tomatoes

Anyone in the trellised tomato business in 1970 can tell you that the year was the worst ever recorded. The average income to farmers for the 1970 crop has been released recently.

The records show 1847 growers produced 1371 acres of trellised tomatoes in Western North Carolina. The gross income from the sale of this crop was approximately \$4,530,000. The take home

pay for farmers was \$2,864,000 for their tomatoes. This figure represents a net of \$2,089 per acre for trellised tomatoes in a poor price year. From this income of \$2,089 subtracting \$675. for out-of-pocket expenses to cover plants, fertilizer, spray material, stakes, wire, gasoline, etc., leaves over \$1400.00 per acre. Pro rating this out to an income per hour of labor figures almost \$1.25,

which isn't bad pay for working at home.

Although average figures do not tell each individual farmer's story, they do indicate that even in the worst price year on record for trellised tomatoes in the seventeen years of production, most farmers made some money.

These figures show also that this was nearly 3 million dollars that Western North Carolina farmers had in their pockets that would not have been there were it not for the trellised tomato industry.
