Your Real Log Home

INCLUDES

- All log parts treated with A Pentachlorophenol Wood Preservative.
- Native northeastern logs are chosen for Real Log Homes. That wood which has the greatest insulation potential is used for the walls, and the same wood with a high strength-to-mass ratio is used as rafters and joists. Every care is taken in this respect to give you a quality home.
- All exterior prehung windows and doors shown in the cut-away drawings on the insert sheets.
- Enough splines, polyurethane gasket material, 10" spikes and snow blocks to complete and insulate your Real Log Home.
- Complete and easily read set of working drawings which include foundation detail, joist layout, and elevations for use by yourself or your contractor.
- The assistance of a skilled Field Man at your site. He will direct you and your crew every minute of the crucial first four hours of construction. After that, you will feel like an expert yourself.

GREEN MOUNTAIN ESTATES

For information on Green Mountain Estates and/or the Carolina Log Home please call Frank Horton at 682-6211 or write P. O. Box 171, Burnsville, N.C.

Horton Has 'Real Log Home' Franchise; Sees Great Possibilities In Yancey

If you are planning to build your country home, a second home to unwind and rediscover yourself in, a home suitable for the ease of retirement living or an investment property, a log home is your answer, according to Frank Horton of the A & H Development Company in Yancey County.

Frank holds the franchise for "Real Log Home" buildings for this area and is a staunch advocate of log home living.

"Log construction has been the one enduring truly American architectural style," says Frank. Early frontiersmen and trappers chose log buildings because they were simply constructed and easily erected with a minimum of time, tools and skill.

On an approximately 50 acre site in Green Mountain, Frank has erected one log cabin and plans to build several more on beautiful rolling hills with huge pine trees shading the land. The log homes will blend harmoniously with the landscape--they will never detract from the environment, says Frank.

Good roads have been constructed into the property and lead to each proposed cabin site.

The one cabin which Frank has already built is a stunning example of how the finished "Real Log Home" can look.

Native stone is used for a low wall in front of the home and for steps and a pathway to the cabin. Inside the home is a

large fireplace of native stone which adds impact to the large living area. Big windows are well placed to give the interior a bright, airy look--usually not found in log homes which many times have a closed-in look. A cheerful built-in kitchen and dining area makes the home a woman's dream. A large bathroom and utility area complete the first level, and upstairs are two bedrooms with large win-

dows to catch the view of mountain peaks and woodland. A second convenient bath has also been included upstairs.

A log cabin has a built-in heritage," says Frank. You may find that "Real Log Home" package is the answer to everything you've always wanted, virtually maintenance-free, modest initial cost, and with the enduring beauty and lasting fragrance of natural wood.

Deer Studied For Disease

A team of wildlife disease experts was flown into the Flat Top section of the Pisgah Game Land in Yancey County recently to investigate the discovery of several dead deer.

The team--from the Southeastern Cooperative Wildlife Disease Study at the University of Georgia--was called in by the North Carolina Wildlife Resources Commission to try to identify the cause. So far, only a few dead deer have been found. The research team has taken blood samples from live-trapped deer to try to determine what kind of disease is affecting the deer. The results will be announced by the Wildlife Commission as soon as they are known.

Last year, a disease struck deer in the Uwharrie Game Land

and other areas where deer populations were high. However, despite the disease, the deer herds were not significantly hurt, and the Flat Top herd is not considered endangered at this point.

"This sort of problem usually occurs in areas where deer populations are high," said Frank Barick, chief of the Division of Game for the Wildlife Commission. "It is a natural control which occurs where hunters have not killed enough deer to keep the herd within the limits of its range."

Needs Help-- And A Tooth

Going bear hunting this winter? If you do, and you kill a bear, the N. C. Wildlife Resources Commission could use your help--and a tooth.

The Wildlife Commission is trying to learn more about bears in North Carolina so that proper management and regulations can be applied in future years to save the state's dwindling supply of bears.

Hunters who kill a bear during the season are asked to take the kill to the nearest Wildlife Cooperator Agent. The agent will then contact a Commission game biologist who will get in touch with the hunter.

The hunter will then be asked to fill out a brief form furnishing information that can be used in studies. Also, the biologist will extract a small tooth from the bear to determine the bear's age.

"The tooth will be a small one, and it will not mar the bear's appearance for those who want to have him mounted," said Dick Hamilton, a Wildlife Commission spokesman.

The program is purely voluntary, but the information collected could help raise the population of bears in the state in future years, and provide better hunting.

America's Love Affair With The Outdoors

Public awareness of the wonders of nature has caused a huge interest in camping. Whether overnight, over the week-end, or on an entire vacation, people are flocking to the various camp-sites throughout the country. The variety of equipment matches that of the campers themselves. Investments can surpass those for a luxury automobile.

One company has found a way to combine a lightweight, fiberglass trailer designed for both long and short-term camping trips. Only 13 feet long, less than 7 feet wide, and weighing only 850 pounds, the Boler American can easily be towed by a compact car. It is large enough to sleep four.

Clean-up chores present no problem. Utilizing Ensolite insulation which was designed originally for aircraft and space vehicles, the insulation material is a closed cell vinyl foam with a carpet grained finish easily cleaned with a damp cloth. Vinyl flooring is also utilized.

With the current trend towards personalization, the Boler American can be ordered in a choice of colors. The interior appliances and fixtures compliment the exterior color.

As a safety feature, the windows are shatter-proof plexiglass. The frame is constructed with a steel frame, with roof and side-walls made of fiberglass. Investment in this camping system is under \$2,000.00.

For further information, including a four-color brochure and dealer listing, send 25¢ to Boler American Corporation, 412 Union National Building, Wichita, Kansas 67202. Information on obtaining dealerships is also available by writing to the same address.
