JOHN DEERE
TWO-CYLINDER
ENGINE DESIGN

Cornerstone of Greater Tractor Value for 25 YEARS

John Deere two-cylinder engine design was born with the introduction of the first tractor to bear the John Deere name—the Model "D"—back in 1924.

Right from the start, the simple, rugged construction of that tractor proved itself. Here was unequalled simplicity and strength through fewer, heavier parts... easier maintenance through greater accessibility. Here was husky farm power that won immediate popularity with farmers everywhere... that set new standards for tractor dependability, economy, and long life.

These same basic advantages are just as important in a tractor today as they were a quarter-century ago. They're yours to enjoy, yours to profit by, along with every modern operating feature, when you choose a John Deere. See us soon.

Here is the John Deere Model "A" Tractor, a favorite on large row-crop farms. Available with either all-fuel or gasoline engine.
