program these were 45 per cent each.

4. Diversion payments will not be made on the minimum acreage allotment (11.11 per cent of the 1965 allotment) required to participate in the program. If diversion, in addition to the required minimum, is at least 10 per cent of the farm's 1965 allotment, payment on such additional diversion will equal to 50 per cent of the loan rate times the normal yield. This was 20 per cent for all acres diverted to conserving use in 1964. Maximum diversion will be 20 per cent of the allotment or 15 acres, whichever is greater.

5. Wheat and feed grain (including oats and rye) acreage substitution will be possible. There was no substitution possible in 1964. A producer who has both a farm wheat allotment and a feed grain base and who signs up for both program will be eligible to use substitution provisions. If feed grains are planted on wheat allotment acreage, the producer may put this feed grain production under loan, but he will not be eligible for feed grain payment-in-kind certificates on this acreage, nor will he receive marketing certificates for wheat grown in lieu of feed grains. Diversion payments will be computed on the basis of the actual crop or crops reduced.

6. A producer with a history for oats and rye can, at the time of sign up, request an oat-rye base to be established for his farm. By participating in each program at the minimum level, he has the following alternatives: plant his feed grain acreage to feed grains and increase his wheat production by the amount of oat-rye base less required diversion; plant feed grain acreage to feed grains,

combine wheat and oat-rye allotment, and plant oats or rye on this acreage; combine feed grain acreage with wheat and oat-rye allotment and plant wheat on all acreage; or combine feed grain acreage with wheat and oat-rye on all acreage.

Price support loans will be available on production from oat-rye base, but wheat marketing certificates will not be issued. Corn, grain, sorghum and barley cannot be grown on oat-rye base or on the wheat allotment acreage under the first two options under No. 6. Diversion payments from the oat-rye option will be a percentage of the wheat diversion rate and will be announced with the 1965 feed grain program.

7. A producer can overplant his wheat acreage allotment by more than 50% on any farm in which he has an interest and get program loan and certificate benefits. Wheat produced on excess acreage must be stored under bond and producer must carry out conserving use requirements of the program. Excess wheat can be sold in years in which there is a crop failure or a crop is below normal production of the allotted acres for the farmer. Producers who overplant allotments are not eligible for an oat-rye base or to substitute wheat and feed grain within the program. Neither are they eligible for diversion payments.

8. Producers overplanting wheat allotment in 1965 will not lose historical acreage in future years.

"These changes create any number of alternatives for the producer," Nichols points out. "In the special publication we have prepared, we have attempted to use a typical situation in showing what these alternatives offer in terms of net returns."

He added, "In order that the farmer make the best decision, it is important that he know his cost of production and an estimate of his net returns per acre of the crop involved."

The economists used the following model in arriving at net return figures: 30 acres feed grain base, all of which is corn; 20 acres wheat allotment in 1963; and 10 acres oat-rye base.

Under this situation, if the farmer elected to stay out of program, the expected net return would be \$2,360; if he plants all corn, substitutes barley for wheat, \$2,505; participate gram at minimum, \$2,497; participate at maximum, \$1,849; in wheat and feed grain participate at minimum and substitute corn for wheat, \$2,796; participate at minimum and substitute wheat for corn and oats, \$1,626.

Each farmer's situation is different, so Nichols urges each to compute his cost and returns under each alternatives before making a choice.

New Wheat Program Offers Farmers Many Choices In 1965

Due to major changes in the government wheat program for 1964, the North Carolina grain producer has a wide range of choices to consider in planning his next crop.

The alternatives are far more numerous than the two that are obvious, namely to participate in the program or not to participate.

Extension economists at North Carolina State have attempted to incorporate in a special publication, "The 1965 Wheat Program, An Analysis of Alternatives for Grain Producers," information that will be helpful to the producer in making decisions concerning his crop.

This publication is available at county agricultural extension offices or may be obtained upon request from the Department of Agricultural Economics, N. C. State, Raleigh.

In it the economists point out that, as a result of changes in the wheat program, "a farmer with both a wheat allotment and feed grain base can, upon diverting the minimum acreage in each program, combine base and grow all wheat, all feed grains or any combination of these crops for the most efficient land use."

In addition, a producer with a history for oats and rye may request that a separate oat-rye acreage base be established for his farm on which he can plant wheat.

The producer has until Oct. 2, to consider the alternatives and sign up under the wheat program at the county ASCS office.

"Before reaching a decision regarding participation, the farmer will want to familiarize himself with the changes in the wheat program from 1964," points out Dr. T. E. Nichols Jr., extension economist.

The changes include the following:

1. National price support loan rate will be \$1.25 per bushel, down from \$1.30. N. C. loan rate has not been announced, but the diversion payment rate has been based on \$1.40 per bushel, down from \$1.45.

2. Domestic certificates will be valued at 75 cent per bushel, up from 70 cents. Export certificates will be worth 30 cents, up from 25 cents.

3. Program participants will be eligible for domestic certificates on 35 per cent of the normal production of the allotted acreage. Under the 1964

JARMAN FUNERAL HOME

24 Hour Ambulance Service
Air Conditioned

JA 3-5143

KINSTON, N. C.

AUCTION

Carrie W. Carter Farm

LOCATED APPROXIMATELY ONE (1) MILE NORTH EAST OF OF PINK HILL ON HIGHWAY 11

**SATURDAY, SEPTEMBER 12, 1964
10:00 A.M.**

Total Acres 149.7

Approximately 40 Acres Cleared

1964 Tobacco Allotment 4.47 Acres

Corn Base 16 Acres

This Farm Will Be Sold As A Whole Or in Four Individual Tracts

- 1—5 ROOM DWELLING 1—TENANT HOUSE 3—TOBACCO BARNs
- 2—PACK HOUSE 1—GARAGE SEVERAL OTHER OUT BUILDINGS

Tract 1-A Total acres approximately 34½ Ten Acres Cleared
1.17 Acres Tobacco 4 Acres Corn Base

Tract 1-B Total Acres Approximately 34½ Five Acres Cleared
.57 Acres Tobacco 2 Acres Corn Base

Tract 2 Total Acres Approximately 40 8.4 Acres Cleared
.95 Acres Tobacco 4 Acres Corn Base

Tract 3 Total Acres Approximately 40 15.7 Acres Cleared
1.78 Acres Tobacco 6 Acres Corn Base

This is a valuable piece of property, having over 3200 feet of road frontage on Highway 11 (Kinston-Pink Hill Highway) in prospective development area, just north of the Drive-In Theatre.

Hogs and Cattle Bought Daily

Premium Price Paid for Meat Type Hogs

"Honeycutt Meat Products"

Let us slaughter and chill your cattle and hogs for you, saving you the drudgery of slaughtering on the farm.

We slaughter every day except Saturday — just bring us the live animal any day — get the dressed meat the following day or we will deliver it to the locker plant for you.

Charge: Hogs 2c per pound;
Cattle \$2.50 per head plus the 5th quarter.
